

# Module Handbook

## Master's Program Mechanical Engineering (M.Sc.)

SPO SPO 2015 (issued), Study Program: Mechanical Engineering 2016

Summer term 2025

Date: 28/02/2025

KIT DEPARTMENT OF MECHANICAL ENGINEERING

## Table Of Contents

<b>1. About this handbook</b> .....	<b>12</b>
1.1. Notes and rules .....	12
1.1.1. Begin and completion of a module .....	12
1.1.2. Module versions .....	12
1.1.3. General and partial examinations .....	12
1.1.4. Types of exams .....	12
1.1.5. Repeating exams .....	12
1.1.6. Additional accomplishments .....	13
1.1.7. Further information .....	13
<b>2. Qualification goals of field of study</b> .....	<b>14</b>
<b>3. Curriculum (German)</b> .....	<b>15</b>
<b>4. Study and examination regulations</b> .....	<b>24</b>
<b>5. Amendment statute</b> .....	<b>40</b>
<b>6. Access statute</b> .....	<b>43</b>
<b>7. Amendment statute to the access statute</b> .....	<b>52</b>
<b>8. Second amendment statute to the access statute</b> .....	<b>55</b>
<b>9. Field of study structure</b> .....	<b>57</b>
9.1. Master's Thesis .....	57
9.2. Advanced Engineering Fundamentals .....	57
9.3. Specialization .....	58
9.3.1. Specialization: General Mechanical Engineering .....	59
9.3.2. Specialization: Energy- and Environment Engineering .....	60
9.3.3. Specialization: Vehicle Technology .....	61
9.3.4. Specialization: Mechatronics and Microsystems Technology .....	62
9.3.5. Specialization: Product Development and Engineering Design .....	63
9.3.6. Specialization: Production Technology .....	64
9.3.7. Specialization: Theoretical Mechanical Engineering .....	65
9.3.8. Specialization: Materials and Structures for High Performance Systems .....	65
9.4. Additional Examinations .....	65
<b>10. Modules</b> .....	<b>66</b>
10.1. Compulsory Elective Module Mechanical Engineering [MSc-Modul 04, WF] - M-MACH-102597 .....	66
10.2. Compulsory Elective Module Natural Science/Computer Science/Electrical Engineering [MSc-Modul WPF-Modul NIE] - M-MACH-102595 .....	72
10.3. Compulsory Elective Subject Economics/Law [MSc-Modul WPF-Modul WR] - M-MACH-102596 .....	74
10.4. Fundamentals and Methods of Automotive Engineering [MSc-WPfM-GuM-FzgT] - M-MACH-102739 .....	75
10.5. Fundamentals and Methods of Energy and Environmental Engineering [MSc-WPfM-GuM-E+U] - M-MACH-10257577 .....	75
10.6. Fundamentals and Methods of General Mechanical Engineering [MSc-WPfM-GuM-MB] - M-MACH-102405 .....	78
10.7. Fundamentals and Methods of Materials and Structures for High Performance Systems [MSc-WPfM-W+S] - M-MACH-102744 .....	80
10.8. Fundamentals and Methods of Mechatronics and Microsystem Technology [MSc-WPfM-M+M] - M-MACH-102740 .....	81
10.9. Fundamentals and Methods of Product Development and Construction [MSc-WPfM-GuM-PEK] - M-MACH-102741 .....	83
10.10. Fundamentals and Methods of Production Technology [MSc-WPf-GuM-PT] - M-MACH-102742 .....	84
10.11. Fundamentals and Methods of Theoretical Foundations of Mechanical Engineering [MSc-WPfM-GuM-ThM] - M-MACH-102743 .....	86
10.12. Key Competencies - M-MACH-102824 .....	88
10.13. Laboratory Course [MSc-Modul 07, FP] - M-MACH-102591 .....	90
10.14. Major Field: Advanced Materials Modelling and Data Management [SP 56] - M-MACH-105904 .....	92
10.15. Major Field: Advanced Mechatronics [SP 01] - M-MACH-102598 .....	93
10.16. Major Field: Applied Mechanics [SP 30] - M-MACH-102646 .....	95
10.17. Major Field: Automation Technology [SP 04] - M-MACH-102601 .....	97
10.18. Major Field: Cognitive Technical Systems [SP 22] - M-MACH-102609 .....	99
10.19. Major Field: Combustion Engines Based Powertrains [SP 58] - M-MACH-102650 .....	101
10.20. Major Field: Computational Mechanics [SP 06] - M-MACH-102604 .....	103
10.21. Major Field: Development of Innovative Appliances and Power Tools [SP 51] - M-MACH-102642 .....	105
10.22. Major Field: Energy Converting Engines [SP 24] - M-MACH-102627 .....	107
10.23. Major Field: Energy Technology for Buildings [SP 55] - M-MACH-102648 .....	109
10.24. Major Field: Engineering Design [SP 10] - M-MACH-102605 .....	110
10.25. Major Field: Engineering Thermodynamics [SP 45] - M-MACH-102635 .....	112

10.26. Major Field: Fluid Mechanic [SP 41] - M-MACH-102634 .....	114
10.27. Major Field: Fundamentals of Energy Technology [SP 15] - M-MACH-102623 .....	116
10.28. Major Field: Fusion Technology [SP 53] - M-MACH-102643 .....	118
10.29. Major Field: Information Technology [SP 18] - M-MACH-102624 .....	120
10.30. Major Field: Information Technology of Logistic Systems [SP 19] - M-MACH-102625 .....	122
10.31. Major Field: Integrated Product Development - M-MACH-102626 .....	123
10.32. Major Field: Lightweight Construction [SP 25] - M-MACH-102628 .....	124
10.33. Major Field: Logistics and Material Flow Theory [SP 29] - M-MACH-102629 .....	127
10.34. Major Field: Man - Technology - Organisation [SP 03] - M-MACH-102600 .....	129
10.35. Major Field: Materials Science and Engineering [SP 26] - M-MACH-102611 .....	131
10.36. Major Field: Mechatronics [SP 31] - M-MACH-102614 .....	134
10.37. Major Field: Medical Technology [SP 32] - M-MACH-102615 .....	136
10.38. Major Field: Microactuators and Microsensors [SP 54] - M-MACH-102647 .....	138
10.39. Major Field: Microsystem Technology [SP 33] - M-MACH-102616 .....	140
10.40. Major Field: Mobile Machines [SP 34] - M-MACH-102630 .....	142
10.41. Major Field: Modeling and Simulation in Dynamics [SP 61] - M-MACH-104434 .....	144
10.42. Major Field: Modeling and Simulation in Energy- and Fluid Engineering [SP 27] - M-MACH-102612 .....	146
10.43. Major Field: Polymer Engineering [SP 36] - M-MACH-102632 .....	148
10.44. Major Field: Power Plant Technology [SP 23] - M-MACH-102610 .....	150
10.45. Major Field: Powertrain Systems [SP 02] - M-MACH-102599 .....	152
10.46. Major Field: Production Technology [SP 39] - M-MACH-102618 .....	154
10.47. Major Field: Rail System Technology [SP 50] - M-MACH-102641 .....	156
10.48. Major Field: Robotics [SP 40] - M-MACH-102633 .....	158
10.49. Major Field: Technical Ceramics and Powder Materials [SP 43] - M-MACH-102619 .....	160
10.50. Major Field: Technical Logistics [SP 44] - M-MACH-102640 .....	161
10.51. Major Field: Thermal Turbomachines [SP 46] - M-MACH-102636 .....	162
10.52. Major Field: Tribology [SP 47] - M-MACH-102637 .....	164
10.53. Major Field: Vehicle Technology [SP 12] - M-MACH-102607 .....	166
10.54. Major Field: Vibration Theory [SP 60] - M-MACH-104443 .....	168
10.55. Master's Thesis - M-MACH-102858 .....	169
10.56. Mathematical Methods [MSc-Modul 08, MM] - M-MACH-102594 .....	170
10.57. Modeling and Simulation [MSc-Modul 05, MS] - M-MACH-102592 .....	171
10.58. Product Development - Dimensioning of Components [MSc-Modul 06, PE-B] - M-MACH-102593 .....	172
10.59. Product Development – Methods of Product Engineering - M-MACH-102718 .....	173
10.60. Supplementary Studies on Science, Technology and Society - M-FORUM-106753 .....	175
<b>11. Courses .....</b>	<b>179</b>
11.1. Actuators and Sensors in Nanotechnology - T-MACH-105238 .....	179
11.2. Additive Manufacturing Processes - T-MACH-113570 .....	180
11.3. Advanced CFD with OpenFOAM - T-MACH-111390 .....	182
11.4. Aerodynamics - T-MACH-112029 .....	184
11.5. Aerothermodynamics - T-MACH-105437 .....	185
11.6. Alternative Powertrain for Automobiles - T-MACH-105655 .....	186
11.7. Analysis of Exhaust Gas and Lubricating Oil in Combustion Engines - T-MACH-105173 .....	187
11.8. Analysis Tools for Combustion Diagnostics - T-MACH-105167 .....	188
11.9. Anatomy/Sports Medicine I - T-GEISTSOZ-103287 .....	189
11.10. Anatomy/Sports Medicine II - T-GEISTSOZ-111188 .....	190
11.11. Appliance and Power Tool Design - T-MACH-105229 .....	191
11.12. Appliance and Power Tool Design Project Work - T-MACH-110767 .....	192
11.13. Application of Advanced Programming Languages in Mechanical Engineering - T-MACH-105390 .....	193
11.14. Applied Chemistry - T-CHEMBIO-100302 .....	194
11.15. Applied Cryo-Technology - T-MACH-111824 .....	195
11.16. Applied Materials Simulation - T-MACH-105527 .....	197
11.17. Applied Materials Simulation - T-MACH-110929 .....	199
11.18. Applied Mathematics in Natural Science: Flows with chemical reactions - T-MACH-108847 .....	201
11.19. Applied Tribology in Industrial Product Development - T-MACH-105215 .....	202
11.20. Artificial Intelligence in Production - T-MACH-112115 .....	203
11.21. Atomistic Simulations and Particle Dynamics - T-MACH-113412 .....	205
11.22. Automated Manufacturing Systems - T-MACH-108844 .....	207
11.23. Automated Visual Inspection and Image Processing - T-INFO-101363 .....	208
11.24. Automotive Engineering I - T-MACH-100092 .....	209
11.25. Automotive Engineering II - T-MACH-102117 .....	211
11.26. Automotive Vision - T-MACH-114149 .....	213

11.27. Automotive Vision - T-MACH-105218 .....	214
11.28. Basic Seminar Supplementary Studies on Science, Technology and Society - Self Registration - T-FORUM-113579 .....	216
11.29. Basics of Technical Logistics I - T-MACH-109919 .....	217
11.30. Basics of Technical Logistics I - T-MACH-112841 .....	219
11.31. Basics of Technical Logistics II - T-MACH-109920 .....	221
11.32. Beyond Conventional Materials - Metamaterials & Architected Structures - T-MACH-113698 .....	222
11.33. Bioelectric Signals - T-ETIT-101956 .....	224
11.34. Biologically Inspired Robots - T-MACH-113856 .....	225
11.35. Biomechanics: Design in Nature and Inspired by Nature - T-MACH-105651 .....	226
11.36. Biomedical Engineering for Engineers - Fundamentals of Project Management in Medical Engineering - T-MACH-112817 .....	227
11.37. BioMEMS - Microsystems Technologies for Life-Sciences and Medicine I - T-MACH-100966 .....	228
11.38. BioMEMS - Microsystems Technologies for Life-Sciences and Medicine II - T-MACH-100967 .....	229
11.39. BioMEMS - Microsystems Technologies for Life-Sciences and Medicine III - T-MACH-100968 .....	231
11.40. BioMEMS - Microsystems Technologies for Life-Sciences and Medicine IV - T-MACH-106877 .....	232
11.41. Boosting of Combustion Engines - T-MACH-105649 .....	233
11.42. Boosting the Modern Energy Landscape via Turbo Machines & Machine Learning - T-MACH-113359 .....	234
11.43. BUS-Controls - Advance - T-MACH-108889 .....	236
11.44. Business Administration for Engineers and IT Professionals - T-MACH-109933 .....	237
11.45. CAE-Workshop - T-MACH-105212 .....	239
11.46. Cell Biology - T-CIWVT-111062 .....	241
11.47. Ceramic Processing Technology - T-MACH-102182 .....	242
11.48. CFD for Power Engineering - T-MACH-105407 .....	243
11.49. CFD-Lab Using OpenFOAM - T-MACH-105313 .....	245
11.50. CO <sub>2</sub> -Neutral Combustion Engines and their Fuels I - T-MACH-111550 .....	247
11.51. CO <sub>2</sub> -Neutral Combustion Engines and their Fuels II - T-MACH-111560 .....	248
11.52. Cognitive Automobiles - Laboratory - T-MACH-105378 .....	249
11.53. Combined Cycle Power Plants - T-MACH-105444 .....	251
11.54. Combustion Diagnostics - T-MACH-105429 .....	252
11.55. Combustion Engines I - T-MACH-102194 .....	253
11.56. Combustion Engines II - T-MACH-104609 .....	254
11.57. Communication Systems and Protocols - T-ETIT-101938 .....	255
11.58. Composite Manufacturing - Polymers, Fibers, Semi-Finished Products, Manufacturing Technologies - T-MACH-105535 .....	256
11.59. Computational Continuum Mechanics - T-MACH-112987 .....	258
11.60. Computational Dynamics - T-MACH-105349 .....	259
11.61. Computational Intelligence - T-MACH-105314 .....	261
11.62. Computational Mechanics I - T-MACH-105351 .....	263
11.63. Computational Mechanics II - T-MACH-105352 .....	264
11.64. Computational Vehicle Dynamics - T-MACH-105350 .....	265
11.65. Constitution and Properties of Protective Coatings - T-MACH-105150 .....	267
11.66. Constitution and Properties of Wearresistant Materials - T-MACH-102141 .....	269
11.67. Contact Mechanics - T-MACH-105786 .....	271
11.68. Continuum Mechanics of Solids and Fluids - T-MACH-110377 .....	273
11.69. Control of Mobile Machines - T-MACH-111821 .....	275
11.70. Control of Mobile Machines – Prerequisites - T-MACH-111820 .....	276
11.71. Control Technology - T-MACH-105185 .....	277
11.72. Current Topics on BioMEMS - T-MACH-102176 .....	279
11.73. Data Analytics for Engineers - T-MACH-105694 .....	280
11.74. Data Driven Engineering 1: Machine Learning for Dynamical Systems - T-MACH-111193 .....	282
11.75. Data Driven Engineering 2: Advanced Topics - T-MACH-111373 .....	283
11.76. Data Science and Scientific Workflows - T-MACH-111588 .....	284
11.77. Data Science and Scientific Workflows (Project) - T-MACH-111603 .....	286
11.78. Data-Driven Algorithms in Vehicle Technology - T-MACH-112126 .....	288
11.79. Decision-Making and Motion Planning for Automated Driving - T-MACH-113597 .....	289
11.80. Deep Learning for Engineers - T-MACH-113882 .....	291
11.81. Design and Development of Mobile Machines - T-MACH-105311 .....	292
11.82. Design and Development of Mobile Machines - Advance - T-MACH-108887 .....	294
11.83. Design and Optimization of Conventional and Electrified Automotive Transmissions - T-MACH-110958 .....	295
11.84. Design of a Jet Engine Combustion Chamber - T-CIWVT-110571 .....	296
11.85. Design of Fuel Cell Systems - T-MACH-111398 .....	297
11.86. Design of Highly Stressed Components - T-MACH-105310 .....	299

11.87. Design with Plastics - T-MACH-105330 .....	301
11.88. Designing with Composites - T-MACH-108721 .....	303
11.89. Designing with numerical methods in product development - T-MACH-108719 .....	304
11.90. Development of Hybrid Drivetrains - T-MACH-110817 .....	305
11.91. Development of Oil-Hydraulic Powertrain Systems - T-MACH-105441 .....	306
11.92. Digital Control - T-MACH-105317 .....	307
11.93. Digital Transformation of Industrial Companies - T-MACH-111298 .....	309
11.94. Digitalization from Product Concept to Production - T-MACH-113647 .....	312
11.95. Digitization in the Railway System - T-MACH-113016 .....	314
11.96. Dimensioning of Material Flow Systems in Production and Logistics - T-MACH-113950 .....	315
11.97. Drive System Engineering A: Automotive Systems - T-MACH-113405 .....	316
11.98. Drive Train of Mobile Machines - T-MACH-105307 .....	317
11.99. Dynamic Systems of Technical Logistics - T-MACH-112113 .....	319
11.100. Dynamic Systems of Technical Logistics - Project - T-MACH-112114 .....	320
11.101. Dynamics of Electro-Mechanical Systems - T-MACH-111260 .....	321
11.102. Dynamics of the Automotive Drive Train - T-MACH-105226 .....	322
11.103. Dynamics of Unsteady Flows - Modelling and Control of Industrial Processes - T-MACH-112719 .....	323
11.104. Edge-AI in Software and Sensor Applications - T-INFO-110819 .....	324
11.105. Elective Specialization Supplementary Studies on Science, Technology and Society / About Knowledge and Science - Self-Registration - T-FORUM-113580	326
11.106. Elective Specialization Supplementary Studies on Science, Technology and Society / Science in Public Debates - Self Registration - T-FORUM-113582	327
11.107. Elective Specialization Supplementary Studies on Science, Technology and Society / Science in Society - Self- Registration - T-FORUM-113581	328
11.108. Electric Drives, Power Electronics and Electrical Grids - T-ETIT-112895 .....	329
11.109. Electrical Engineering for Business Engineers, Part II - T-ETIT-100534 .....	330
11.110. Energy and Indoor Climate Concepts - T-ARCH-107406 .....	331
11.111. Energy Efficient Intralogistic Systems - T-MACH-105151 .....	332
11.112. Energy Storage and Network Integration - T-MACH-105952 .....	333
11.113. Energy Systems I: Renewable Energy - T-MACH-105408 .....	334
11.114. Energy Topology and Resilience - T-MACH-112755 .....	335
11.115. Engine Laboratory - T-MACH-105337 .....	337
11.116. Engine Measurement Techniques - T-MACH-105169 .....	338
11.117. Engineer's Field of Work - T-MACH-105721 .....	339
11.118. Excercises - Fatigue of Welded Components and Structures - T-MACH-109304 .....	341
11.119. Exercices - Tribology - T-MACH-109303 .....	342
11.120. Exercises for Applied Materials Simulation - T-MACH-107671 .....	344
11.121. Exercises for Applied Materials Simulation - T-MACH-110928 .....	346
11.122. Exercises for Fundamentals in Materials Thermodynamics and Heterogeneous Equilibria - T-MACH-107669 .....	347
11.123. Exercises for Materials Characterization - T-MACH-107685 .....	349
11.124. Exercises for Solid State Reactions and Kinetics of Phase Transformations - T-MACH-107632 .....	351
11.125. Experimental Characterisation of Thermo-visco-elastic Materials - T-MACH-112758 .....	352
11.126. Experimental Dynamics - T-MACH-105514 .....	353
11.127. Experimental Fluid Mechanics - T-MACH-105512 .....	354
11.128. Experimental Lab Class in Welding Technology, in Groups - T-MACH-102099 .....	356
11.129. Experimental Techniques in Thermo- and Fluid-dynamics - T-MACH-106373 .....	358
11.130. Fabrication Processes in Microsystem Technology - T-MACH-102166 .....	359
11.131. Failure Analysis - T-MACH-105724 .....	361
11.132. Failure of Structural Materials: Deformation and Fracture - T-MACH-102140 .....	363
11.133. Failure of Structural Materials: Fatigue and Creep - T-MACH-102139 .....	365
11.134. Fatigue of Materials - T-MACH-112106 .....	367
11.135. Fatigue of Welded Components and Structures - T-MACH-105984 .....	369
11.136. FEM Workshop - Constitutive Laws - T-MACH-105392 .....	370
11.137. Finite Difference Methods for Numerical Solution of Thermal and Fluid Dynamical Problems - T-MACH-105391 .....	372
11.138. Finite Volume Methods for Fluid Flow - T-MACH-105394 .....	373
11.139. Flow Measurement Techniques - T-MACH-108796 .....	374
11.140. Flows and Heat Transfer in Energy Technology - T-MACH-105403 .....	376
11.141. Flows with Chemical Reactions - T-MACH-105422 .....	377
11.142. Fluid Mechanics of Turbulent Flows - T-BGU-110841 .....	378
11.143. Fluid Power Systems - T-MACH-102093 .....	379
11.144. Fluid-Structure-Interaction - T-MACH-105474 .....	381
11.145. Fluid-Structure-Interaction with Python - T-MACH-111507 .....	382
11.146. Foundations of Nonlinear Continuum Mechanics - T-MACH-105324 .....	383

11.147. Foundry Technology - T-MACH-105157 .....	384
11.148. Fuels and Lubricants for Combustion Engines - T-MACH-105184 .....	385
11.149. Fuels and Lubricants for Engine Powertrains - T-MACH-111623 .....	386
11.150. Fundamentals for Design of Motor-Vehicle Bodies I - T-MACH-102116 .....	387
11.151. Fundamentals for Design of Motor-Vehicle Bodies II - T-MACH-102119 .....	389
11.152. Fundamentals in Materials Thermodynamics and Heterogeneous Equilibria - T-MACH-107670 .....	391
11.153. Fundamentals in the Development of Commercial Vehicles - T-MACH-111389 .....	393
11.154. Fundamentals of Catalytic Exhaust Gas Aftertreatment - T-MACH-105044 .....	396
11.155. Fundamentals of Combustion Engine Technology - T-MACH-105652 .....	397
11.156. Fundamentals of Combustion I - T-MACH-105213 .....	398
11.157. Fundamentals of Combustion II - T-MACH-105325 .....	400
11.158. Fundamentals of Data Transmission - T-ETIT-112851 .....	402
11.159. Fundamentals of Energy Technology - T-MACH-105220 .....	403
11.160. Fusion Technology A - T-MACH-105411 .....	405
11.161. Fusion Technology B - T-MACH-105433 .....	407
11.162. Gear Cutting Technology - T-MACH-102148 .....	409
11.163. Genetics - T-CIWVT-111063 .....	411
11.164. Global Logistics - T-MACH-111003 .....	412
11.165. Global Production - T-MACH-110991 .....	414
11.166. Global Production and Logistics - T-MACH-110337 .....	416
11.167. Handling Characteristics of Motor Vehicles I - T-MACH-105152 .....	419

# 1 About this handbook

## 1.1 Notes and rules

The program exists of several **subjects** (e.g. Fundamentals of Engineering). Every subject is split into **modules** and every module itself consists of one or more interrelated **module component exams**. The extent of every module is indicated by credit points (CP), which will be credited after the successful completion of the module. Some of the modules are **obligatory**. According to the interdisciplinary character of the program, a great variety of **individual specialization and deepening possibilities** exists for a large number of modules. This enables the student to customize content and time schedule of the program according to personal needs, interest and job perspective. The **module handbook** describes the modules belonging to the program. It describes particularly:

- the structure of the modules
- the extent (in CP),
- the dependencies of the modules,
- the learning outcomes,
- the assessment and examinations.

The module handbook serves as a necessary orientation and as a helpful guide throughout the studies. The module handbook does not replace the **course catalog**, which provides important information concerning each semester and variable course details (e.g. time and location of the course).

### 1.1.1 Begin and completion of a module

Each module and each examination can only be selected once. The decision on the assignment of an examination to a module (if, for example, an examination in several modules is selectable) is made by the student at the moment when he / she is registered for the appropriate examination. A module is completed or passed when the module examination is passed (grade 4.0 or better). For modules in which the module examination is carried out over several partial examinations, the following applies: The module is completed when all necessary module partial examinations have been passed. In the case of modules which offer alternative partial examinations, the module examination is concluded with the examination with which the required total credit points are reached or exceeded. The module grade, however, is combined with the weight of the predefined credit points for the module in the overall grade calculation.

### 1.1.2 Module versions

It is not uncommon for modules to be revised due to, for example, new courses or cancelled examinations. As a rule, a new module version is created, which applies to all students who are new to the module. On the other hand, students who have already started the module enjoy confidence and remain in the old module version. These students can complete the module on the same conditions as at the beginning of the module (exceptions are regulated by the examination committee). The date of the student's "binding declaration" on the choice of the module in the sense of §5(2) of the Study and Examination Regulation is decisive. This binding declaration is made by registering for the first examination in this module.

In the module handbook, all modules are presented in their current version. The version number is given in the module description. Older module versions can be accessed via the previous module handbooks in the archive.

### 1.1.3 General and partial examinations

Module examinations can be either taken in a general examination or in partial examinations. If the module examination is offered as a general examination, the entire learning content of the module will be examined in a single examination. If the module examination is subdivided into partial examinations, the content of each course will be examined in corresponding partial examinations. Registration for examinations can be done online at the campus management portal. The following functions can be accessed on <https://campus.studium.kit.edu/>:

- Register/unregister for examinations
- Check for examination results
- Create transcript of records

For further and more detailed information, <https://studium.kit.edu/Seiten/FAQ.aspx>.

### 1.1.4 Types of exams

Exams are split into written exams, oral exams and alternative exam assessments. Exams are always graded. Non exam assessments can be repeated several times and are not graded.

### 1.1.5 Repeating exams

Principally, a failed written exam, oral exam or alternative exam assessment can be repeated only once. If the repeat examination (including an eventually provided verbal repeat examination) will be failed as well, the examination claim is lost. A request for a second repetition has to be made in written form to the examination committee two months after losing the examination claim.

### **1.1.6 Additional accomplishments**

Additional accomplishments are voluntarily taken exams, which have no impact on the overall grade of the student and can take place on the level of single courses or on entire modules. It is also mandatory to declare an additional accomplishment as such at the time of registration for an exam.

### **1.1.7 Further information**

More detailed information about the legal and general conditions of the program can be found in the examination regulation of the program (<http://www.sle.kit.edu/amtlicheBekanntmachungen.php>).

## **Qualification Goals Mechanical Engineering (M.Sc.)**

Graduates of the Master's degree program in mechanical engineering at KIT are able to participate independently in value-added processes in engineering and contribute through their research-oriented education to science. They are especially qualified for a responsible position in industry, science, and technical services and acquire qualifications that allow pursuing doctoral studies.

Graduates acquire broad and in-depth knowledge of engineering fundamentals. This is ensured by a compulsory area, which includes mathematical methods of engineering, modeling and simulation as well as the processes of product development. As a result, they are able to deal independently with the state of research and to further refine methods. They can develop, evaluate, and interpret comprehensive and interdisciplinary simulation studies. From their understanding of market demand and value-added processes, they are able to develop products of mechanical engineering. The methods and practices that are used can be reflected and adapted to changing conditions in order to optimize the own approach.

In the specialization area, consisting of two major fields and associated lectures, graduates acquire the essential knowledge, how to transfer the general fundamentals into concrete issues of mechanical engineering. Thus, they are qualified to play an important role in complex research and development projects as well as to participate competently in the innovation process and are professionally prepared for future leadership roles.

In other natural sciences, economics, and social sciences related lectures, students acquire further skills. Thereby they are, inter alia, in a position to make well thought out decisions, taking into account social, economic, and ethical constraints.

Graduates of the Master's program in mechanical engineering at KIT have broad and in-depth knowledge. This solid foundation enables them to analyze and synthesize complex systems. They can also develop, reflect, evaluate, and shape independently and sustainably systems and processes of mechanical engineering, taking into account technical, social, economic, and ethical constraints. They deal constructively with their own, with others' views, and present their work results in an understandable form. Graduates are able to independently identify tasks, to obtain the information necessary to their solution, to select methods, to acquire skills and thus to contribute to added value. They are in a position to choose a concrete occupational area of mechanical engineering.

## 0 Abkürzungsverzeichnis

Vertiefungsrichtungen:	MB	Allgemeiner Maschinenbau
	E+U	Energie- und Umwelttechnik
	FzgT	Fahrzeugtechnik
	M+M	Mechatronik und Mikrosystemtechnik
	PEK	Produktentwicklung und Konstruktion
	PT	Produktionstechnik
	ThM W+S	Theoretischer Maschinenbau Werkstoffe und Strukturen für Hochleistungssysteme
Semester:	WS	Wintersemester
	SS	Sommersemester
Schwerpunkte:	K, KP	Teilleistung im Kernbereich, ggf. Pflicht des Schwerpunkts
	E	Teilleistung im Ergänzungsbereich des Schwerpunkts
	EM	Teilleistung im Ergänzungsbereich ist nur im Masterstudiengang wählbar
Lehrveranstaltung:	V	Vorlesung
	Ü	Übung
	P	Praktikum
	SWS	Semesterwochenstunden
Teilleistung:	LP	Leistungspunkte
	Pr	Prüfung
	Pr (h)	Prüfungsdauer in Stunden
	mPr	mündliche Prüfung
	sPr	schriftliche Prüfung
	PraA	Prüfungsleistung anderer Art
	St.I.	Studienleistung, unbenotete Modulleistung
	TL	Teilleistung
Gew	Gewichtung einer Prüfungsleistung im Modul bzw. in der Gesamtnote	
Sonstiges:	SPO	Studien- und Prüfungsordnung
	w	wählbar
	p	verpflichtend

## 1 Studienpläne, Module und Prüfungen

Das Masterstudium kann sowohl zum Winter- als auch zum Sommersemester aufgenommen werden. Wegen der freien Wahl der Module lässt sich für das Masterstudium kein exemplarischer Studienverlauf angeben.

Die Angabe der Leistungspunkte (LP) erfolgt gemäß dem „European Credit Transfer and Accumulation System“ (ECTS) und basiert auf dem von den Studierenden zu absolvierenden Arbeitspensum.

### 1.1 Prüfungsmodalitäten

In jedem Semester wird für Prüfungen mindestens ein Prüfungstermin angeboten. Prüfungstermine sowie Termine, zu denen die Anmeldung zu den Prüfungen spätestens erfolgen muss, werden vom Prüfungsausschuss festgelegt. Die Anmeldung für die Prüfungen erfolgt in der Regel mindestens eine Woche vor der Prüfung. Anmelde- und Prüfungstermine werden rechtzeitig bekanntgegeben, bei schriftlichen Prüfungen mindestens 6 Wochen vor der Prüfung.

Über Hilfsmittel, die bei einer Prüfung benutzt werden dürfen, entscheidet der Prüfer. Eine Liste der zugelassenen Hilfsmittel wird gleichzeitig mit der Ankündigung des Prüfungstermins bekanntgegeben.

Studienleistungen können solange beliebig oft wiederholt werden, bis diese erfolgreich absolviert wurden.

Zur Berechnung der Modul- und Fachnoten wird auf §7 der SPO verwiesen. Die Modulnote errechnet sich dabei aus einem nach den Leistungspunkten der einzelnen Teilmodule gewichteter Notendurchschnitt. Die differenzierten Noten (s. SPO § 7, Abs. 2) sind bei der Berechnung der Modulnoten als Ausgangsdaten zu verwenden.

### 1.2 Vertiefungsrichtungen

Es stehen folgende Vertiefungsrichtungen zur Auswahl:

Vertiefungsrichtung	Abk.	Verantwortliche/r
Allgemeiner Maschinenbau	MB	Furmans
Energie- und Umwelttechnik	E+U	Maas
Fahrzeugtechnik	FzgT	Geimer
Mechatronik und Mikrosystemtechnik	M+M	Korvink
Produktentwicklung und Konstruktion	PEK	Albers/ Matthiesen
Produktionstechnik	PT	Schulze
Theoretischer Maschinenbau	ThM	Böhlke
Werkstoffe und Strukturen für Hochleistungssysteme	W+S	Heilmaier

Die Wahlmöglichkeiten im Wahlpflichtmodul „Grundlagen und Methoden der Vertiefungsrichtung“ und in den Schwerpunkten richten sich nach der gewählten Vertiefungsrichtung. Die zur Verfügung stehenden Module der Vertiefungsrichtungen werden im Modulhandbuch aufgeführt. Schriftliche Prüfungen werden als Klausuren mit der angegebenen Prüfungsdauer in Stunden abgenommen. Prüfungsleistungen gehen mit dem angegebenen Gewicht (Gew) in die Gesamtnote ein.

Folgende Module sind im Masterstudiengang zu belegen:

Fach	Modul	LP/ Modul	Teilleistung	LP	Verant- wortliche/r	Art der Erfolgs- kontrolle	Pr (h)	Gew
Vertiefung ingenieurwissenschaftlicher Grundlagen	Produktentstehung – Bauteildimensionierung	7	Produktentstehung - Bauteildimensionierung	7	Schulze	sPr	2	7
	Produktentstehung – Entwicklungsmethodik	6	Methoden und Prozesse der PGE - Produktgenerationsentwicklung	6	Matthiesen, Albers	sPr	2	6
	Modellbildung und Simulation	7	Num. Meth. für Ing.-Anwendungen	4	Kärger, Geimer	sPr	1,5	7
			Simulation mit konz. Parametern	3		mPr	1/3	
	Mathematische Methoden	6	wählbare TL s. Modulhandbuch	6	Frohnapfel	sPr	3 <sup>1</sup>	6
	Laborpraktikum	4	wählbare TL s. Modulhandbuch	4	Stiller, Furmans	St.I.		
	Wahlpflichtmodul Maschinenbau	8	Teilleistung 1, wählbare TL s. Modulhandbuch	4	Frohnapfel	mPr	ca. 0,4	4
			Teilleistung 2, wählbare TL s. Modulhandbuch	4	Frohnapfel	mPr	ca. 0,4	4
	Wahlpflichtmodul nat/inf/etit	6	wählbare TL s. Modulhandbuch	6	Maas	St.I.		
Wahlpflichtmodul wirt/recht	4	wählbare TL s. Modulhandbuch	4	Furmans	St.I.			
Schlüsselqualifikationen	2	wählbare TL von HoC, FORUM (ehemals ZAK) bzw. Modulhandbuch	2	Frohnapfel	St.I.			
Vertiefungsrichtung	Schwerpunkt 1	16	Kern-/Ergänzungsbereich, wählbare TL s. Modulhandbuch	16	SP-Verantwortliche/r	mPr	ca. 2x0,7 bzw. ca. 4x0,4	16
	Schwerpunkt 2	16	Kern-/Ergänzungsbereich, wählbare TL s. Modulhandbuch	16	SP-Verantwortliche/r	mPr	ca. 2x0,7 bzw. ca. 4x0,4	16
	Grundlagen und Methoden der Vertiefungsrichtung	8	Teilleistung 1, wählbare TL s. Modulhandbuch	4	VR-Verantwortliche/r	mPr, sPr	ca. 0,4 bzw. 1,5 - 3	4
			Teilleistung 2, wählbare TL s. Modulhandbuch	4	VR-Verantwortliche/r	mPr, sPr	ca. 0,4 bzw. 1,5 - 3	4
Masterarbeit	Masterarbeit	30	Masterarbeit und Präsentation	30	Frohnapfel	PraA		30

<sup>1</sup> Bei der Veranstaltung „WahrStudienleistunglichkeitstheorie und Statistik“ beträgt die Prüfungsdauer abweichend 1,5 h.

## 2 Zugelassene Teilleistungen in den Wahlpflichtmodulen

Jedes Fach, jedes Modul und jede Teilleistung kann nur einmal im Rahmen des Bachelorstudienganges und des konsekutiven Masterstudiengangs Maschinenbau gewählt werden.

### 2.1 Wahlpflichtmodul Grundlagen und Methoden der Vertiefungsrichtung

Im Masterstudiengang müssen zwei Teilleistungen mit jeweils 4 LP im Modul Grundlagen und Methoden der jeweiligen Vertiefungsrichtung erbracht werden. Wählbare Teilleistungen siehe Modulhandbuch.

### 2.2 Mathematische Methoden

Wählbare Teilleistungen siehe Modulhandbuch.

### 2.3 Wahlpflichtmodul aus dem Bereich Naturwissenschaften/Informatik/Elektrotechnik

Wählbare Teilleistungen siehe Modulhandbuch. Der Wechsel der gewählten Teilleistung ist bis zum Bestehen der Erfolgskontrolle möglich. Andere Teilleistungen, auch aus anderen Fakultäten, können mit Genehmigung des Prüfungsausschusses gewählt werden.

### 2.4 Wahlpflichtmodul aus dem Bereich Wirtschaft/Recht

Wählbare Teilleistungen siehe Modulhandbuch. Der Wechsel der gewählten Teilleistung ist bis zum Bestehen der Erfolgskontrolle möglich. Andere Teilleistungen, auch aus anderen Fakultäten, können mit Genehmigung des Prüfungsausschusses gewählt werden.

### 2.5 Wahlpflichtmodul aus dem Bereich Maschinenbau

Wählbare Teilleistungen siehe Modulhandbuch. Andere Teilleistungen, auch aus anderen Fakultäten, können mit Genehmigung des Prüfungsausschusses gewählt werden.

### 2.6 Laborpraktikum

Wählbare Teilleistungen siehe Modulhandbuch. Der Wechsel der gewählten Teilleistung ist bis zum Bestehen der Erfolgskontrolle möglich.

## 3 Schwerpunkte

Generell gilt, dass jede Teilleistung und jeder Schwerpunkt nur einmal entweder im Rahmen des Bachelorstudienganges und des konsekutiven Masterstudiengangs Maschinenbau gewählt werden kann.

### 3.1 Zuordnung der Schwerpunkte zu den Vertiefungsrichtungen

Folgende Schwerpunkte sind derzeit vom Fakultätsrat genehmigt. In einigen Vertiefungsrichtungen ist die Wahl des **ersten** Schwerpunkts eingeschränkt (einer der mit „p“ gekennzeichneten Schwerpunkte ist zu wählen).

In einem konsekutiven Masterstudium kann der erste Masterschwerpunkt auch als w-Schwerpunkt gewählt werden, wenn ein p-Schwerpunkt dieser Vertiefungsrichtung bereits im Bachelorstudium gewählt wurde.

Schwerpunkt	SP-Verantwortlicher	SP-Nr.	MB	E+U	FzgT	M+M	PEK	PT	ThM	W+S

Tribologie	Dienwiebel	47	w	w	w	w	w	w	w	w
Verbrennungsmotorische Antriebssysteme	Koch	58	w	w	p	w	w			

Für jeden Schwerpunkt werden Teilleistungen im Umfang von 16 LP gewählt, davon werden mindestens 8 LP im Kernbereich (K) erworben. „KP“ bedeutet, dass die Lehrveranstaltung im Kernbereich Pflicht ist, sofern sie nicht bereits belegt wurde. Die übrigen 8 LP können aus dem Ergänzungsbereich kommen. Dabei dürfen im Rahmen von Praktika höchstens 4 LP erworben werden, die auch als Studienleistung erbracht werden können.

Die im Ergänzungsbereich (E) angegebenen Teilleistungen verstehen sich als Empfehlung, andere Teilleistungen (auch aus anderen KIT-Fakultäten) können mit Genehmigung des jeweiligen Schwerpunktverantwortlichen gewählt werden. Dabei ist eine Kombination mit Teilleistungen aus den Bereichen Informatik, Elektrotechnik und Mathematik in einigen Vertiefungsrichtungen besonders willkommen.

Ein Absolvieren des Schwerpunktmoduls mit mehr als 16 LP ist nur im Fall, dass die Addition innerhalb des Schwerpunktmoduls nicht auf 16 LP aufgeht, erlaubt. Nicht zulässig ist es jedoch, noch weitere Teilleistungen anzumelden, wenn bereits 16 LP erreicht oder überschritten wurden.

Für die Prüfungsleistungen in den Schwerpunkten gelten folgende Regeln:

Die Prüfungen werden grundsätzlich mündlich abgenommen, bei unvertretbar hohem Prüfungsaufwand kann eine mündlich durchzuführende Prüfung auch schriftlich abgenommen werden. Es wird empfohlen, die Kernbereichsprüfung im Block abzulegen.

Die Bildung der Schwerpunktnote erfolgt anhand der mit einer Prüfungsleistung abgeschlossenen Teilleistungen. Dabei werden in der Regel alle Teilleistungen gemäß ihrer Leistungspunkte gewichtet. Bei der Bildung der Gesamtnote wird der Schwerpunkt mit 16 LP gewertet.

Die Beschreibung der Schwerpunkte hinsichtlich der jeweils darin enthaltenen Teilleistungen und den damit verbundenen Lehrveranstaltungen ist im aktuellen Modulhandbuch des Masterstudiengangs festgelegt.

#### 4 Masterarbeit

Für die Betreuung der Masterarbeit stehen je nach Vertiefungsrichtung folgende Institute (•) zur Wahl:

In interdisziplinär ausgerichteten Vertiefungsrichtungen ist die Beteiligung von Instituten anderer Fakultäten erwünscht. Mit Zustimmung der Vertiefungsrichtungsverantwortlichen kann der Prüfungsausschuss auch Masterarbeiten an anderen Instituten der Fakultät für Maschinenbau genehmigen. Zustimmung und Genehmigung sind vor Beginn der Arbeit einzuholen.

## 5 Exemplarischer Studienverlaufsplan

Dieser exemplarische Studienverlaufsplan geht von einem Beginn des Studiums im Wintersemester aus. Bei Beginn im Sommersemester können sich Änderungen in der Abfolge der Module ergeben.

Lehrveranstaltungen 1. bis 4. Semester Angaben in Leistungspunkten (LP)	WS 1. Sem.	SS 2. Sem.	WS 3. Sem.	SS 4. Sem.
Produktentstehung – Bauteildimensionierung		7		
Produktentstehung – Entwicklungsmethodik		6		
Modellbildung und Simulation	7			
Mathematische Methoden			6	
Laborpraktikum	4			
Wahlpflichtmodul Maschinenbau	4		4	
Wahlpflichtmodul nat/inf/etit			6	
Wahlpflichtmodul wirt/recht			4	
Schlüsselqualifikationen			2	
Schwerpunkt I	8	8		
Schwerpunkt II		8	8	
Grundlagen und Methoden der Vertiefungsrichtung	4	4		
Masterarbeit				30

## 6 Änderungshistorie (ab 22.04.2015)

07.11.2016	redaktionelle Anpassung der TL-Namen in 2.1
28.06.2017	redaktionelle Anpassungen
13.07.2018	Anpassung der Schwerpunkte sowie redaktionelle Änderungen
08.05.2019	Änderung Punkt 2.1
30.08.2019	redaktionelle Änderungen, u.a. in Punkt 1.2 und 4
31.03.2020	redaktionelle Änderungen, u.a. in Punkt 1.1, 1.2 und Einfügung Punkt 5 (exemplarischer Studienablaufplan)
17.06.2024	Wegfall von Schwerpunkt Fahrdynamik, Fahrzeugkomfort und -akustik, Gauterin
30.10.2024	Modellbildung und Simulation besteht aus zwei Teilleistungen, Frohnappel ersetzt Heilmaier als Studiendekan
12.02.2025	Wegfall von vier Schwerpunkten

Universität des Landes Baden-Württemberg und  
nationales Forschungszentrum in der Helmholtz-Gemeinschaft

Studien- und Prüfungsordnung des Karlsruher Instituts für Technologie (KIT) für den Masterstudiengang Maschinenbau	366
---	-----

---

## **Studien- und Prüfungsordnung des Karlsruher Instituts für Technologie (KIT) für den Master- studiengang Maschinenbau**

**vom 04. August 2015**

Aufgrund von § 10 Absatz 2 Ziff. 5 und § 20 des Gesetzes über das Karlsruher Institut für Technologie (KIT-Gesetz - KITG) in der Fassung vom 14. Juli 2009 (GBl. S. 317 f), zuletzt geändert durch Artikel 5 des Dritten Gesetzes zur Änderung hochschulrechtlicher Vorschriften (3. Hochschulrechtsänderungsgesetz – 3. HRÄG) vom 01. April 2014 (GBl. S. 99, 167) und § 8 Absatz 5 des Gesetzes über die Hochschulen in Baden-Württemberg (Landeshochschulgesetz - LHG) in der Fassung vom 1. Januar 2005 (GBl. S. 1 f), zuletzt geändert durch Artikel 1 des 3. HRÄG vom 01. April 2014 (GBl. S. 99 ff.), hat der Senat des KIT am 20. Juli 2015 die folgende Studien- und Prüfungsordnung für den Masterstudiengang Maschinenbau beschlossen.

Der Präsident hat seine Zustimmung gemäß § 20 Absatz 2 KITG iVm. § 32 Absatz 3 Satz 1 LHG am 04. August 2015 erteilt.

### **Inhaltsverzeichnis**

#### **I. Allgemeine Bestimmungen**

- § 1 Geltungsbereich
- § 2 Ziele des Studiums, Akademischer Grad
- § 3 Regelstudienzeit, Studienaufbau, Leistungspunkte
- § 4 Modulprüfungen, Studien- und Prüfungsleistungen
- § 5 Anmeldung und Zulassung zu den Modulprüfungen und Lehrveranstaltungen
- § 6 Durchführung von Erfolgskontrollen
- § 6 a Erfolgskontrollen im Antwort-Wahl-Verfahren
- § 6 b Computergestützte Erfolgskontrollen
- § 7 Bewertung von Studien- und Prüfungsleistungen
- § 8 Verlust des Prüfungsanspruchs
- § 9 Wiederholung von Erfolgskontrollen, endgültiges Nichtbestehen
- § 10 Abmeldung; Versäumnis, Rücktritt
- § 11 Täuschung, Ordnungsverstoß
- § 12 Mutterschutz, Elternzeit, Wahrnehmung von Familienpflichten
- § 13 Studierende mit Behinderung oder chronischer Erkrankung
- § 14 Modul Masterarbeit
- § 15 Zusatzleistungen
- § 16 Prüfungsausschuss
- § 17 Prüfende und Beisitzende
- § 18 Anerkennung von Studien- und Prüfungsleistungen, Studienzeiten

## **II. Masterprüfung**

§ 19 Umfang und Art der Masterprüfung

§ 20 Bestehen der Masterprüfung, Bildung der Gesamtnote

§ 21 Masterzeugnis, Masterurkunde, Diploma Supplement und Transcript of Records

## **III. Schlussbestimmungen**

§ 22 Bescheinigung von Prüfungsleistungen

§ 23 Aberkennung des Mastergrades

§ 24 Einsicht in die Prüfungsakten

§ 26 Inkrafttreten, Übergangsvorschriften

## Präambel

Das KIT hat sich im Rahmen der Umsetzung des Bolognaprozesses zum Aufbau eines Europäischen Hochschulraumes zum Ziel gesetzt, dass am Abschluss des Studiums am KIT der Mastergrad stehen soll. Das KIT sieht daher die am KIT angebotenen konsekutiven Bachelor- und Masterstudiengänge als Gesamtkonzept mit konsekutivem Curriculum.

## I. Allgemeine Bestimmungen

### § 1 Geltungsbereich

Diese Masterprüfungsordnung regelt Studienablauf, Prüfungen und den Abschluss des Studiums im Masterstudiengang Maschinenbau am KIT.

### § 2 Ziel des Studiums, Akademischer Grad

(1) Im konsekutiven Masterstudium sollen die im Bachelorstudium erworbenen wissenschaftlichen Qualifikationen weiter vertieft, verbreitert, erweitert oder ergänzt werden. Ziel des Studiums ist die Fähigkeit, die wissenschaftlichen Erkenntnisse und Methoden selbstständig anzuwenden und ihre Bedeutung und Reichweite für die Lösung komplexer wissenschaftlicher und gesellschaftlicher Problemstellungen zu bewerten.

(2) Aufgrund der bestandenen Masterprüfung wird der akademische Grad „Master of Science (M.Sc.)“ für den Masterstudiengang Maschinenbau verliehen.

### § 3 Regelstudienzeit, Studienaufbau, Leistungspunkte

(1) Die Regelstudienzeit beträgt vier Semester.

(2) Das Lehrangebot des Studiengangs ist in Fächer, die Fächer sind in Module, die jeweiligen Module in Lehrveranstaltungen gegliedert. Die Fächer und ihr Umfang werden in § 19 festgelegt. Näheres beschreibt das Modulhandbuch.

(3) Der für das Absolvieren von Lehrveranstaltungen und Modulen vorgesehene Arbeitsaufwand wird in Leistungspunkten (LP) ausgewiesen. Die Maßstäbe für die Zuordnung von Leistungspunkten entsprechen dem European Credit Transfer System (ECTS). Ein Leistungspunkt entspricht einem Arbeitsaufwand von etwa 30 Zeitstunden. Die Verteilung der Leistungspunkte auf die Semester hat in der Regel gleichmäßig zu erfolgen.

(4) Der Umfang der für den erfolgreichen Abschluss des Studiums erforderlichen Studien- und Prüfungsleistungen wird in Leistungspunkten gemessen und beträgt insgesamt 120 Leistungspunkte.

(5) Lehrveranstaltungen können nach vorheriger Ankündigung auch in englischer Sprache angeboten werden, sofern es deutschsprachige Wahlmöglichkeiten gibt.

### § 4 Modulprüfungen, Studien- und Prüfungsleistungen

(1) Die Masterprüfung besteht aus Modulprüfungen. Modulprüfungen bestehen aus einer oder mehreren Erfolgskontrollen.

Erfolgskontrollen gliedern sich in Studien- oder Prüfungsleistungen.

(2) Prüfungsleistungen sind:

1. schriftliche Prüfungen,
2. mündliche Prüfungen oder
3. Prüfungsleistungen anderer Art.

**(3)** Studienleistungen sind schriftliche, mündliche oder praktische Leistungen, die von den Studierenden in der Regel lehrveranstaltungsbegleitend erbracht werden. Die Masterprüfung darf nicht mit einer Studienleistung abgeschlossen werden.

**(4)** Von den Modulprüfungen sollen mindestens 70 % benotet sein.

**(5)** Bei sich ergänzenden Inhalten können die Modulprüfungen mehrerer Module durch eine auch modulübergreifende Prüfungsleistung (Absatz 2 Nr.1 bis 3) ersetzt werden.

### **§ 5 Anmeldung und Zulassung zu den Modulprüfungen und Lehrveranstaltungen**

**(1)** Um an den Modulprüfungen teilnehmen zu können, müssen sich die Studierenden online im Studierendenportal zu den jeweiligen Erfolgskontrollen anmelden. In Ausnahmefällen kann eine Anmeldung schriftlich im Studierendenservice oder in einer anderen vom Studierendenservice autorisierten Einrichtung erfolgen. Für die Erfolgskontrollen können durch die Prüfenden Anmeldefristen festgelegt werden. Die Anmeldung der Masterarbeit ist im Modulhandbuch geregelt.

**(2)** Sofern Wahlmöglichkeiten bestehen, müssen Studierende, um zu einer Prüfung in einem bestimmten Modul zugelassen zu werden, vor der ersten Prüfung in diesem Modul mit der Anmeldung zu der Prüfung eine bindende Erklärung über die Wahl des betreffenden Moduls und dessen Zuordnung zu einem Fach abgeben. Auf Antrag des/der Studierenden an den Prüfungsausschuss kann die Wahl oder die Zuordnung nachträglich geändert werden. Sofern bereits ein Prüfungsverfahren in einem Modul begonnen wurde, ist die Änderung der Wahl oder der Zuordnung erst nach Beendigung des Prüfungsverfahrens zulässig; dies gilt nur für Prüfungsleistungen.

**(3)** Zu einer Erfolgskontrolle ist zuzulassen, wer

1. in den Masterstudiengang Maschinenbau am KIT eingeschrieben ist; die Zulassung beurlaubter Studierender ist auf Prüfungsleistungen beschränkt und
2. nachweist, dass er die im Modulhandbuch für die Zulassung zu einer Erfolgskontrolle festgelegten Voraussetzungen erfüllt und
3. nachweist, dass er in dem Masterstudiengang Maschinenbau den Prüfungsanspruch nicht verloren hat.

**(4)** Nach Maßgabe von § 30 Abs. 5 LHG kann die Zulassung zu einzelnen Pflichtveranstaltungen beschränkt werden. Der/die Prüfende entscheidet über die Auswahl unter den Studierenden, die sich rechtzeitig bis zu dem von dem/der Prüfenden festgesetzten Termin angemeldet haben unter Berücksichtigung des Studienfortschritts dieser Studierenden und unter Beachtung von § 13 Abs. 1 Satz 1 und 2, sofern ein Abbau des Überhangs durch andere oder zusätzliche Veranstaltungen nicht möglich ist. Für den Fall gleichen Studienfortschritts sind durch die KIT-Fakultäten weitere Kriterien festzulegen. Das Ergebnis wird den Studierenden rechtzeitig bekannt gegeben.

**(5)** Die Zulassung ist zu versagen, wenn die in Absatz 3 und 4 genannten Voraussetzungen nicht erfüllt sind. Die Zulassung kann versagt werden, wenn die betreffende Erfolgskontrolle bereits in einem grundständigen Bachelorstudiengang am KIT erbracht wurde, der Zulassungsvoraussetzung für diesen Masterstudiengang gewesen ist. Dies gilt nicht für Mastervorzugsleistungen. Zu diesen ist eine Zulassung nach Maßgabe von Satz 1 ausdrücklich zu genehmigen.

### **§ 6 Durchführung von Erfolgskontrollen**

**(1)** Erfolgskontrollen werden studienbegleitend, in der Regel im Verlauf der Vermittlung der Lehrinhalte der einzelnen Module oder zeitnah danach, durchgeführt.

(2) Die Art der Erfolgskontrolle (§ 4 Abs. 2 Nr. 1 bis 3, Abs. 3) wird von der/dem Prüfenden der betreffenden Lehrveranstaltung in Bezug auf die Lerninhalte der Lehrveranstaltung und die Lernziele des Moduls festgelegt. Die Art der Erfolgskontrolle, ihre Häufigkeit, Reihenfolge und Gewichtung sowie gegebenenfalls die Bildung der Modulnote müssen mindestens sechs Wochen vor Vorlesungsbeginn im Modulhandbuch bekannt gemacht werden. Im Einvernehmen von Prüfendem und Studierender bzw. Studierendem können die Art der Prüfungsleistung sowie die Prüfungssprache auch nachträglich geändert werden; im ersten Fall ist jedoch § 4 Abs. 4 zu berücksichtigen. Bei der Prüfungsorganisation sind die Belange Studierender mit Behinderung oder chronischer Erkrankung gemäß § 13 Abs. 1 zu berücksichtigen. § 13 Abs. 1 Satz 3 und 4 gelten entsprechend.

(3) Bei unvertretbar hohem Prüfungsaufwand kann eine schriftlich durchzuführende Prüfungsleistung auch mündlich, oder eine mündlich durchzuführende Prüfungsleistung auch schriftlich abgenommen werden. Diese Änderung muss mindestens sechs Wochen vor der Prüfungsleistung bekannt gegeben werden.

(4) Bei Lehrveranstaltungen in englischer Sprache (§ 3 Abs. 6) können die entsprechenden Erfolgskontrollen in dieser Sprache abgenommen werden. § 6 Abs. 2 gilt entsprechend.

(5) *Schriftliche Prüfungen* (§ 4 Abs. 2 Nr. 1) sind in der Regel von einer/einem Prüfenden nach § 18 Abs. 2 oder 3 zu bewerten. Sofern eine Bewertung durch mehrere Prüfende erfolgt, ergibt sich die Note aus dem arithmetischen Mittel der Einzelbewertungen. Entspricht das arithmetische Mittel keiner der in § 7 Abs. 2 Satz 2 definierten Notenstufen, so ist auf die nächstliegende Notenstufe auf- oder abzurunden. Bei gleichem Abstand ist auf die nächstbessere Notenstufe zu runden. Das Bewertungsverfahren soll sechs Wochen nicht überschreiten. Schriftliche Prüfungen dauern mindestens 60 und höchstens 300 Minuten.

(6) *Mündliche Prüfungen* (§ 4 Abs. 2 Nr. 2) sind von mehreren Prüfenden (Kollegialprüfung) oder von einer/m Prüfenden in Gegenwart einer oder eines Beisitzenden als Gruppen- oder Einzelprüfungen abzunehmen und zu bewerten. Vor der Festsetzung der Note hört die/der Prüfende die anderen an der Kollegialprüfung mitwirkenden Prüfenden an. Mündliche Prüfungen dauern in der Regel mindestens 15 Minuten und maximal 60 Minuten pro Studierenden.

Die wesentlichen Gegenstände und Ergebnisse der *mündlichen Prüfung* sind in einem Protokoll festzuhalten. Das Ergebnis der Prüfung ist den Studierenden im Anschluss an die mündliche Prüfung bekannt zu geben.

Studierende, die sich in einem späteren Semester der gleichen Prüfung unterziehen wollen, werden entsprechend den räumlichen Verhältnissen und nach Zustimmung des Prüflings als Zuhörerinnen und Zuhörer bei mündlichen Prüfungen zugelassen. Die Zulassung erstreckt sich nicht auf die Beratung und Bekanntgabe der Prüfungsergebnisse.

(7) Für *Prüfungsleistungen anderer Art* (§ 4 Abs. 2 Nr. 3) sind angemessene Bearbeitungsfristen einzuräumen und Abgabetermine festzulegen. Dabei ist durch die Art der Aufgabenstellung und durch entsprechende Dokumentation sicherzustellen, dass die erbrachte Prüfungsleistung dem/der Studierenden zurechenbar ist. Die wesentlichen Gegenstände und Ergebnisse der Erfolgskontrolle sind in einem Protokoll festzuhalten.

Bei *mündlich* durchgeführten *Prüfungsleistungen anderer Art* muss neben der/dem Prüfenden ein/e Beisitzende/r anwesend sein, die/der zusätzlich zum/r Prüfenden das Protokoll zeichnet.

*Schriftliche Arbeiten* im Rahmen einer *Prüfungsleistung anderer Art* haben dabei die folgende Erklärung zu tragen: „Ich versichere wahrheitsgemäß, die Arbeit selbstständig angefertigt, alle benutzten Hilfsmittel vollständig und genau angegeben und alles kenntlich gemacht zu haben, was aus Arbeiten anderer unverändert oder mit Abänderungen entnommen wurde.“ Trägt die Arbeit diese Erklärung nicht, wird sie nicht angenommen. Die wesentlichen Gegenstände und Ergebnisse einer solchen Erfolgskontrolle sind in einem Protokoll festzuhalten.

## § 6 a Erfolgskontrollen im Antwort-Wahl-Verfahren

Das Modulhandbuch regelt, ob und in welchem Umfang Erfolgskontrollen im Wege des *Antwort-Wahl-Verfahrens* abgelegt werden können

### § 6 b Computergestützte Erfolgskontrollen

(1) Erfolgskontrollen können computergestützt durchgeführt werden. Dabei wird die Antwort bzw. Lösung der/des Studierenden elektronisch übermittelt und, sofern möglich, automatisiert ausgewertet. Die Prüfungsinhalte sind von einer/einem Prüfenden zu erstellen.

(2) Vor der computergestützten Erfolgskontrolle hat die/der Prüfende sicherzustellen, dass die elektronischen Daten eindeutig identifiziert und unverwechselbar und dauerhaft den Studierenden zugeordnet werden können. Der störungsfreie Verlauf einer computergestützten Erfolgskontrolle ist durch entsprechende technische Betreuung zu gewährleisten, insbesondere ist die Erfolgskontrolle in Anwesenheit einer fachlich sachkundigen Person durchzuführen. Alle Prüfungsaufgaben müssen während der gesamten Bearbeitungszeit zur Bearbeitung zur Verfügung stehen.

(3) Im Übrigen gelten für die Durchführung von computergestützten Erfolgskontrollen die §§ 6 bzw. 6 a.

### § 7 Bewertung von Studien- und Prüfungsleistungen

(1) Das Ergebnis einer Prüfungsleistung wird von den jeweiligen Prüfenden in Form einer Note festgesetzt.

(2) Folgende Noten sollen verwendet werden:

sehr gut (very good)	:	hervorragende Leistung,
gut (good)	:	eine Leistung, die erheblich über den durchschnittlichen Anforderungen liegt,
befriedigend (satisfactory)	:	eine Leistung, die durchschnittlichen Anforderungen entspricht,
ausreichend (sufficient)	:	eine Leistung, die trotz ihrer Mängel noch den Anforderungen genügt,
nicht ausreichend (failed)	:	eine Leistung, die wegen erheblicher Mängel nicht den Anforderungen genügt.

Zur differenzierten Bewertung einzelner Prüfungsleistungen sind nur folgende Noten zugelassen:

1,0; 1,3	:	sehr gut
1,7; 2,0; 2,3	:	gut
2,7; 3,0; 3,3	:	befriedigend
3,7; 4,0	:	ausreichend
5,0	:	nicht ausreichend

(3) Studienleistungen werden mit „bestanden“ oder mit „nicht bestanden“ gewertet.

(4) Bei der Bildung der gewichteten Durchschnitte der Modulnoten, der Fachnoten und der Gesamtnote wird nur die erste Dezimalstelle hinter dem Komma berücksichtigt; alle weiteren Stellen werden ohne Rundung gestrichen.

(5) Jedes Modul und jede Erfolgskontrolle darf in demselben Studiengang nur einmal gewertet werden.

- (6) Eine Prüfungsleistung ist bestanden, wenn die Note mindestens „ausreichend“ (4,0) ist.
- (7) Die Modulprüfung ist bestanden, wenn alle erforderlichen Erfolgskontrollen bestanden sind. Die Modulprüfung und die Bildung der Modulnote sollen im Modulhandbuch geregelt werden. Sofern das Modulhandbuch keine Regelung über die Bildung der Modulnote enthält, errechnet sich die Modulnote aus einem nach den Leistungspunkten der einzelnen Teilmodule gewichteter Notendurchschnitt. Die differenzierten Noten (Absatz 2) sind bei der Berechnung der Modulnoten als Ausgangsdaten zu verwenden.
- (8) Die Ergebnisse der Erfolgskontrollen sowie die erworbenen Leistungspunkte werden durch den Studierendenservice des KIT verwaltet.
- (9) Die Noten der Module eines Faches gehen in die Fachnote mit einem Gewicht proportional zu den ausgewiesenen Leistungspunkten der Module ein.
- (10) Die Gesamtnote der Masterprüfung, die Fachnoten und die Modulnoten lauten:
- |         |         |   |              |
|---------|---------|---|--------------|
|         | bis 1,5 | = | sehr gut     |
| von 1,6 | bis 2,5 | = | gut          |
| von 2,6 | bis 3,5 | = | befriedigend |
| von 3,6 | bis 4,0 | = | ausreichend  |

#### **§ 8 Wiederholung von Erfolgskontrollen, endgültiges Nichtbestehen**

- (1) Studierende können eine nicht bestandene schriftliche Prüfung (§ 4 Absatz 2 Nr. 1) einmal wiederholen. Wird eine schriftliche Wiederholungsprüfung mit „nicht ausreichend“ (5,0) bewertet, so findet eine mündliche Nachprüfung im zeitlichen Zusammenhang mit dem Termin der nicht bestandenen Prüfung statt. In diesem Falle kann die Note dieser Prüfung nicht besser als „ausreichend“ (4,0) sein.
- (2) Studierende können eine nicht bestandene mündliche Prüfung (§ 4 Absatz 2 Nr. 2) einmal wiederholen.
- (3) Wiederholungsprüfungen nach Absatz 1 und 2 müssen in Inhalt, Umfang und Form (mündlich oder schriftlich) der ersten entsprechen. Ausnahmen kann der zuständige Prüfungsausschuss auf Antrag zulassen.
- (4) Prüfungsleistungen anderer Art (§ 4 Absatz 2 Nr. 3) können einmal wiederholt werden.
- (5) Studienleistungen können mehrfach wiederholt werden.
- (6) Die Wiederholung von Prüfungsleistungen hat spätestens bis zum Ende des Prüfungszeitraumes des übernächsten Semesters zu erfolgen.
- (7) Die Prüfungsleistung ist endgültig nicht bestanden, wenn die mündliche Nachprüfung im Sinne des Absatzes 1 mit „nicht ausreichend“ (5,0) bewertet wurde. Die Prüfungsleistung ist ferner endgültig nicht bestanden, wenn die mündliche Prüfung im Sinne des Absatzes 2 oder die Prüfungsleistung anderer Art gemäß Absatz 4 zweimal mit „nicht bestanden“ bewertet wurde.
- (8) Das Modul ist endgültig nicht bestanden, wenn eine für sein Bestehen erforderliche Prüfungsleistung endgültig nicht bestanden ist.
- (9) Eine zweite Wiederholung derselben Prüfungsleistung gemäß § 4 Abs. 2 ist nur in Ausnahmefällen auf Antrag des/der Studierenden zulässig („Antrag auf Zweitwiederholung“). Der Antrag ist schriftlich beim Prüfungsausschuss in der Regel bis zwei Monate nach Bekanntgabe der Note zu stellen.

Über den ersten Antrag eines/einer Studierenden auf Zweitwiederholung entscheidet der Prüfungsausschuss, wenn er den Antrag genehmigt. Wenn der Prüfungsausschuss diesen Antrag ablehnt, entscheidet ein Mitglied des Präsidiums. Über weitere Anträge auf Zweitwiederholung entscheidet nach Stellungnahme des Prüfungsausschusses ein Mitglied des Präsidiums. Wird

der Antrag genehmigt, hat die Zweitwiederholung spätestens zum übernächsten Prüfungstermin zu erfolgen. Absatz 1 Satz 2 und 3 gelten entsprechend.

**(10)** Die Wiederholung einer bestandenen Prüfungsleistung ist nicht zulässig.

**(11)** Die Masterarbeit kann bei einer Bewertung mit „nicht ausreichend“ (5,0) einmal wiederholt werden. Eine zweite Wiederholung der Masterarbeit ist ausgeschlossen.

### **§ 9 Verlust des Prüfungsanspruchs**

Ist eine nach dieser Studien- und Prüfungsordnung erforderliche Studien- oder Prüfungsleistung endgültig nicht bestanden oder eine Wiederholungsprüfung nach § 8 Abs. 6 nicht rechtzeitig erbracht oder die Masterprüfung bis zum Ende des Prüfungszeitraums des siebenten Fachsemesters einschließlich etwaiger Wiederholungen nicht vollständig abgelegt, so erlischt der Prüfungsanspruch im Studiengang Maschinenbau, es sei denn, dass die Fristüberschreitung nicht selbst zu vertreten ist. Die Entscheidung über eine Fristverlängerung und über Ausnahmen von der Fristregelung trifft der Prüfungsausschuss unter Beachtung der in § 32 Abs. 6 LHG genannten Tätigkeiten auf Antrag des/der Studierenden. Der Antrag ist schriftlich in der Regel bis sechs Wochen vor Ablauf der Frist zu stellen.

### **§ 10 Abmeldung; Versäumnis, Rücktritt**

**(1)** Studierende können ihre Anmeldung zu *schriftlichen Prüfungen* ohne Angabe von Gründen bis zur Ausgabe der Prüfungsaufgaben widerrufen (Abmeldung). Eine Abmeldung kann online im Studierendenportal bis 24:00 Uhr des Vortages der Prüfung oder in begründeten Ausnahmefällen beim Studierendenservice innerhalb der Geschäftszeiten erfolgen. Erfolgt die Abmeldung gegenüber dem/der Prüfenden hat diese/r Sorge zu tragen, dass die Abmeldung im Campus Management System verbucht wird.

**(2)** Bei *mündlichen Prüfungen* muss die Abmeldung spätestens drei Werktage vor dem betreffenden Prüfungstermin gegenüber dem/der Prüfenden erklärt werden. Der Rücktritt von einer mündlichen Prüfung weniger als drei Werktage vor dem betreffenden Prüfungstermin ist nur unter den Voraussetzungen des Absatzes 5 möglich. Der Rücktritt von mündlichen Nachprüfungen im Sinne von § 9 Abs. 1 ist grundsätzlich nur unter den Voraussetzungen von Absatz 5 möglich.

**(3)** Die Abmeldung von *Prüfungsleistungen anderer Art* sowie von *Studienleistungen* ist im Modulhandbuch geregelt.

**(4)** Eine Erfolgskontrolle gilt als mit „nicht ausreichend“ (5,0) bewertet, wenn die Studierenden einen Prüfungstermin ohne triftigen Grund versäumen oder wenn sie nach Beginn der Erfolgskontrolle ohne triftigen Grund von dieser zurücktreten. Dasselbe gilt, wenn die Masterarbeit nicht innerhalb der vorgesehenen Bearbeitungszeit erbracht wird, es sei denn, der/die Studierende hat die Fristüberschreitung nicht zu vertreten.

**(5)** Der für den Rücktritt nach Beginn der Erfolgskontrolle oder das Versäumnis geltend gemachte Grund muss dem Prüfungsausschuss unverzüglich schriftlich angezeigt und glaubhaft gemacht werden. Bei Krankheit des/der Studierenden oder eines allein zu versorgenden Kindes oder pflegebedürftigen Angehörigen kann die Vorlage eines ärztlichen Attestes verlangt werden.

### **§ 11 Täuschung, Ordnungsverstoß**

**(1)** Versuchen Studierende das Ergebnis ihrer Erfolgskontrolle durch Täuschung oder Benutzung nicht zugelassener Hilfsmittel zu beeinflussen, gilt die betreffende Erfolgskontrolle als mit „nicht ausreichend“ (5,0) bewertet.

**(2)** Studierende, die den ordnungsgemäßen Ablauf einer Erfolgskontrolle stören, können von der/dem Prüfenden oder der Aufsicht führenden Person von der Fortsetzung der Erfolgskontrolle ausgeschlossen werden. In diesem Fall gilt die betreffende Erfolgskontrolle als mit „nicht ausrei-

chend“ (5,0) bewertet. In schwerwiegenden Fällen kann der Prüfungsausschuss diese Studierenden von der Erbringung weiterer Erfolgskontrollen ausschließen.

(3) Näheres regelt die Allgemeine Satzung des KIT zur Redlichkeit bei Prüfungen und Praktika in der jeweils gültigen Fassung.

### **§ 12 Mutterschutz, Elternzeit, Wahrnehmung von Familienpflichten**

(1) Auf Antrag sind die Mutterschutzfristen, wie sie im jeweils gültigen Gesetz zum Schutz der erwerbstätigen Mutter (Mutterschutzgesetz - MuSchG) festgelegt sind, entsprechend zu berücksichtigen. Dem Antrag sind die erforderlichen Nachweise beizufügen. Die Mutterschutzfristen unterbrechen jede Frist nach dieser Prüfungsordnung. Die Dauer des Mutterschutzes wird nicht in die Frist eingerechnet.

(2) Gleichfalls sind die Fristen der Elternzeit nach Maßgabe des jeweils gültigen Gesetzes (Bundeselterngeld- und Elternzeitgesetz - BEEG) auf Antrag zu berücksichtigen. Der/die Studierende muss bis spätestens vier Wochen vor dem Zeitpunkt, von dem an die Elternzeit angetreten werden soll, dem Prüfungsausschuss, unter Beifügung der erforderlichen Nachweise schriftlich mitteilen, in welchem Zeitraum die Elternzeit in Anspruch genommen werden soll. Der Prüfungsausschuss hat zu prüfen, ob die gesetzlichen Voraussetzungen vorliegen, die bei einer Arbeitnehmerin bzw. einem Arbeitnehmer den Anspruch auf Elternzeit auslösen würden, und teilt dem/der Studierenden das Ergebnis sowie die neu festgesetzten Prüfungszeiten unverzüglich mit. Die Bearbeitungszeit der Masterarbeit kann nicht durch Elternzeit unterbrochen werden. Die gestellte Arbeit gilt als nicht vergeben. Nach Ablauf der Elternzeit erhält der/die Studierende ein neues Thema, das innerhalb der in § 14 festgelegten Bearbeitungszeit zu bearbeiten ist.

(3) Der Prüfungsausschuss entscheidet auf Antrag über die flexible Handhabung von Prüfungsfristen entsprechend den Bestimmungen des Landeshochschulgesetzes, wenn Studierende Familienpflichten wahrzunehmen haben. Absatz 2 Satz 4 bis 6 gelten entsprechend.

### **§ 13 Studierende mit Behinderung oder chronischer Erkrankung**

(1) Bei der Gestaltung und Organisation des Studiums sowie der Prüfungen sind die Belange von Studierenden mit Behinderung oder chronischer Erkrankung zu berücksichtigen. Insbesondere ist Studierenden mit Behinderung oder chronischer Erkrankung bevorzugter Zugang zu teilnahmebegrenzten Lehrveranstaltungen zu gewähren und die Reihenfolge für das Absolvieren bestimmter Lehrveranstaltungen entsprechend ihrer Bedürfnisse anzupassen. Studierende sind gemäß Bundesgleichstellungsgesetz (BGG) und Sozialgesetzbuch Neuntes Buch (SGB IX) behindert, wenn ihre körperliche Funktion, geistige Fähigkeit oder seelische Gesundheit mit hoher Wahrscheinlichkeit länger als sechs Monate von dem für das Lebensalter typischen Zustand abweichen und daher ihre Teilhabe am Leben in der Gesellschaft beeinträchtigt ist. Der Prüfungsausschuss entscheidet auf Antrag der/des Studierenden über das Vorliegen der Voraussetzungen nach Satz 2 und 3. Die/der Studierende hat die entsprechenden Nachweise vorzulegen.

(2) Weisen Studierende eine Behinderung oder chronische Erkrankung nach und folgt daraus, dass sie nicht in der Lage sind, Erfolgskontrollen ganz oder teilweise in der vorgeschriebenen Zeit oder Form abzulegen, kann der Prüfungsausschuss gestatten, die Erfolgskontrollen in einem anderen Zeitraum oder einer anderen Form zu erbringen. Insbesondere ist behinderten Studierenden zu gestatten, notwendige Hilfsmittel zu benutzen.

(3) Weisen Studierende eine Behinderung oder chronische Erkrankung nach und folgt daraus, dass sie nicht in der Lage sind, die Lehrveranstaltungen regelmäßig zu besuchen oder die gemäß § 19 erforderlichen Studien- und Prüfungsleistungen zu erbringen, kann der Prüfungsausschuss auf Antrag gestatten, dass einzelne Studien- und Prüfungsleistungen nach Ablauf der in dieser Studien- und Prüfungsordnung vorgesehenen Fristen absolviert werden können.

**§ 14 Modul Masterarbeit**

**(1)** Voraussetzung für die Zulassung zum Modul Masterarbeit ist, dass die/der Studierende Modulprüfungen im Umfang von 74 LP erfolgreich abgelegt hat. Über Ausnahmen entscheidet der Prüfungsausschuss auf Antrag der/des Studierenden.

**(1 a)** Dem Modul Masterarbeit sind 30 LP zugeordnet. Es besteht aus der Masterarbeit und einer Präsentation. Die Präsentation hat spätestens sechs Wochen nach Abgabe der Masterarbeit zu erfolgen.

**(2)** Die Masterarbeit kann von Hochschullehrer/innen und leitenden Wissenschaftler/innen gemäß § 14 Abs. 3 Ziff. 1 KITG vergeben werden. Darüber hinaus kann der Prüfungsausschuss weitere Prüfende gemäß § 17 Abs. 2 und 3 zur Vergabe des Themas berechtigen. Den Studierenden ist Gelegenheit zu geben, für das Thema Vorschläge zu machen. Soll die Masterarbeit außerhalb der KIT-Fakultät für Maschinenbau angefertigt werden, so bedarf dies der Genehmigung durch den Prüfungsausschuss. Die Masterarbeit kann auch in Form einer Gruppenarbeit zugelassen werden, wenn der als Prüfungsleistung zu bewertende Beitrag der einzelnen Studierenden aufgrund objektiver Kriterien, die eine eindeutige Abgrenzung ermöglichen, deutlich unterscheidbar ist und die Anforderung nach Absatz 4 erfüllt. In Ausnahmefällen sorgt die/der Vorsitzende des Prüfungsausschusses auf Antrag der oder des Studierenden dafür, dass die/der Studierende innerhalb von vier Wochen ein Thema für die Masterarbeit erhält. Die Ausgabe des Themas erfolgt in diesem Fall über die/den Vorsitzende/n des Prüfungsausschusses.

**(3)** Thema, Aufgabenstellung und Umfang der Masterarbeit sind von dem Betreuer bzw. der Betreuerin so zu begrenzen, dass sie mit dem in Absatz 4 festgelegten Arbeitsaufwand bearbeitet werden kann.

**(4)** Die Masterarbeit soll zeigen, dass die Studierenden in der Lage sind, ein Problem aus ihrem Studienfach selbstständig und in begrenzter Zeit nach wissenschaftlichen Methoden zu bearbeiten. Der Umfang der Masterarbeit entspricht 30 Leistungspunkten. Die maximale Bearbeitungsdauer beträgt sechs Monate. Thema und Aufgabenstellung sind an den vorgesehenen Umfang anzupassen. Der Prüfungsausschuss legt fest, in welchen Sprachen die Masterarbeit geschrieben werden kann. Auf Antrag des Studierenden kann der/die Prüfende genehmigen, dass die Masterarbeit in einer anderen Sprache als Deutsch geschrieben wird.

**(5)** Bei der Abgabe der Masterarbeit haben die Studierenden schriftlich zu versichern, dass sie die Arbeit selbstständig verfasst und keine anderen als die angegebenen Quellen und Hilfsmittel benutzt haben, die wörtlich oder inhaltlich übernommenen Stellen als solche kenntlich gemacht und die Satzung des KIT zur Sicherung guter wissenschaftlicher Praxis in der jeweils gültigen Fassung beachtet haben. Wenn diese Erklärung nicht enthalten ist, wird die Arbeit nicht angenommen. Die Erklärung kann wie folgt lauten: „Ich versichere wahrheitsgemäß, die Arbeit selbstständig verfasst, alle benutzten Hilfsmittel vollständig und genau angegeben und alles kenntlich gemacht zu haben, was aus Arbeiten anderer unverändert oder mit Abänderungen entnommen wurde sowie die Satzung des KIT zur Sicherung guter wissenschaftlicher Praxis in der jeweils gültigen Fassung beachtet zu haben.“ Bei Abgabe einer unwahren Versicherung wird die Masterarbeit mit „nicht ausreichend“ (5,0) bewertet.

**(6)** Der Zeitpunkt der Ausgabe des Themas der Masterarbeit ist durch die Betreuerin/den Betreuer und die/den Studierenden festzuhalten und dies beim Prüfungsausschuss aktenkundig zu machen. Der Zeitpunkt der Abgabe der Masterarbeit ist durch den/die Prüfende/n beim Prüfungsausschuss aktenkundig zu machen. Das Thema kann nur einmal und nur innerhalb des ersten Monats der Bearbeitungszeit zurückgegeben werden. Macht der oder die Studierende einen triftigen Grund geltend, kann der Prüfungsausschuss die in Absatz 4 festgelegte Bearbeitungszeit auf Antrag der oder des Studierenden um höchstens drei Monate verlängern. Wird die Masterarbeit nicht fristgerecht abgeliefert, gilt sie als mit „nicht ausreichend“ (5,0) bewertet, es sei denn, dass die Studierenden dieses Versäumnis nicht zu vertreten haben.

**(7)** Die Masterarbeit wird von mindestens einem/einer Hochschullehrer/in oder einem/einer leitenden Wissenschaftler/in gemäß § 14 Abs. 3 Ziff. 1 KITG und einem/einer weiteren Prüfenden bewertet. In der Regel ist eine/r der Prüfenden die Person, die die Arbeit gemäß Absatz 2 vergeben hat. Bei nicht übereinstimmender Beurteilung dieser beiden Personen setzt der Prüfungs-

ausschuss im Rahmen der Bewertung dieser beiden Personen die Note der Masterarbeit fest; er kann auch einen weiteren Gutachter bestellen. Die Bewertung hat innerhalb von sechs Wochen nach Abgabe der Masterarbeit zu erfolgen.

### § 15 Zusatzleistungen

(1) Es können auch weitere Leistungspunkte (Zusatzleistungen) im Umfang von höchstens 30 LP aus dem Gesamtangebot des KIT erworben werden. § 3 und § 4 der Prüfungsordnung bleiben davon unberührt. Diese Zusatzleistungen gehen nicht in die Festsetzung der Gesamt- und Modulnoten ein. Die bei der Festlegung der Modulnote nicht berücksichtigten LP werden als Zusatzleistungen im Transcript of Records aufgeführt und als Zusatzleistungen gekennzeichnet. Auf Antrag der/des Studierenden werden die Zusatzleistungen in das Masterzeugnis aufgenommen und als Zusatzleistungen gekennzeichnet. Zusatzleistungen werden mit den nach § 7 vorgesehenen Noten gelistet.

(2) Die Studierenden haben bereits bei der Anmeldung zu einer Prüfung in einem Modul diese als Zusatzleistung zu deklarieren.

### § 16 Prüfungsausschuss

(1) Für den Masterstudiengang Maschinenbau wird ein Prüfungsausschuss gebildet. Er besteht aus vier stimmberechtigten Mitgliedern: zwei Hochschullehrer/innen / leitenden Wissenschaftler/innen gemäß § 14 Abs. 3 Ziff. 1 KITG / Privatdozentinnen bzw. -dozenten, zwei akademischen Mitarbeiterinnen und Mitarbeitern nach § 52 LHG / wissenschaftlichen Mitarbeiter/innen gemäß § 14 Abs. 3 Ziff. 2 KITG und einer bzw. einem Studierenden mit beratender Stimme. Im Falle der Einrichtung eines gemeinsamen Prüfungsausschusses für den Bachelor- und den Masterstudiengang Maschinenbau erhöht sich die Anzahl der Studierenden auf zwei Mitglieder mit beratender Stimme, wobei je eine bzw. einer dieser beiden aus dem Bachelor- und aus dem Masterstudiengang stammt. Die Amtszeit der nichtstudentischen Mitglieder beträgt zwei Jahre, die des studentischen Mitglieds ein Jahr.

(2) Die/der Vorsitzende, ihre/sein Stellvertreter/in, die weiteren Mitglieder des Prüfungsausschusses sowie deren Stellvertreter/innen werden von dem KIT-Fakultätsrat bestellt, die akademischen Mitarbeiter/innen nach § 52 LHG, die wissenschaftlichen Mitarbeiter gemäß § 14 Abs. 3 Ziff. 2 KITG und die Studierenden auf Vorschlag der Mitglieder der jeweiligen Gruppe; Wiederbestellung ist möglich. Die/der Vorsitzende und deren/dessen Stellvertreter/in müssen Hochschullehrer/innen oder leitende Wissenschaftler/innen § 14 Abs. 3 Ziff. 1 KITG sein. Die/der Vorsitzende des Prüfungsausschusses nimmt die laufenden Geschäfte wahr und wird durch das jeweilige Prüfungssekretariat unterstützt.

(3) Der Prüfungsausschuss achtet auf die Einhaltung der Bestimmungen dieser Studien- und Prüfungsordnung und fällt die Entscheidungen in Prüfungsangelegenheiten. Er entscheidet über die Anerkennung von Studienzeiten sowie Studien- und Prüfungsleistungen und trifft die Feststellung gemäß § 18 Absatz 1 Satz 1. Er berichtet der KIT-Fakultät regelmäßig über die Entwicklung der Prüfungs- und Studienzeiten, einschließlich der Bearbeitungszeiten für die Masterarbeiten und die Verteilung der Modul- und Gesamtnoten. Er ist zuständig für Anregungen zur Reform der Studien- und Prüfungsordnung und zu Modulbeschreibungen. Der Prüfungsausschuss entscheidet mit der Mehrheit seiner Stimmen. Bei Stimmengleichheit entscheidet der Vorsitzende des Prüfungsausschusses.

(4) Der Prüfungsausschuss kann die Erledigung seiner Aufgaben für alle Regelfälle auf die/den Vorsitzende/n des Prüfungsausschusses übertragen. In dringenden Angelegenheiten, deren Erledigung nicht bis zu der nächsten Sitzung des Prüfungsausschusses warten kann, entscheidet die/der Vorsitzende des Prüfungsausschusses.

(5) Die Mitglieder des Prüfungsausschusses haben das Recht, der Abnahme von Prüfungen beizuwohnen. Die Mitglieder des Prüfungsausschusses, die Prüfenden und die Beisitzenden unterliegen der Verschwiegenheit. Sofern sie nicht im öffentlichen Dienst stehen, sind sie durch die/den Vorsitzende/n zur Verschwiegenheit zu verpflichten.

(6) In Angelegenheiten des Prüfungsausschusses, die eine an einer anderen KIT-Fakultät zu absolvierende Prüfungsleistung betreffen, ist auf Antrag eines Mitgliedes des Prüfungsausschusses eine fachlich zuständige und von der betroffenen KIT-Fakultät zu nennende prüfungsberechtigte Person hinzuzuziehen.

(7) Belastende Entscheidungen des Prüfungsausschusses sind schriftlich mitzuteilen. Sie sind zu begründen und mit einer Rechtsbehelfsbelehrung zu versehen. Vor einer Entscheidung ist Gelegenheit zur Äußerung zu geben. Widersprüche gegen Entscheidungen des Prüfungsausschusses sind innerhalb eines Monats nach Zugang der Entscheidung schriftlich oder zur Niederschrift beim Präsidium des KIT einzulegen.

### **§ 17 Prüfende und Beisitzende**

(1) Der Prüfungsausschuss bestellt die Prüfenden. Er kann die Bestellung der/dem Vorsitzenden übertragen.

(2) Prüfende sind Hochschullehrer/innen sowie leitende Wissenschaftler/innen gemäß § 14 Abs. 3 Ziff. 1 KITG, habilitierte Mitglieder und akademische Mitarbeiter/innen gemäß § 52 LHG, welche der KIT-Fakultät angehören und denen die Prüfungsbefugnis übertragen wurde; desgleichen kann wissenschaftlichen Mitarbeitern gemäß § 14 Abs. 3 Ziff. 2 KITG die Prüfungsbefugnis übertragen werden. Bestellt werden darf nur, wer mindestens die dem jeweiligen Prüfungsgegenstand entsprechende fachwissenschaftliche Qualifikation erworben hat.

(3) Soweit Lehrveranstaltungen von anderen als den unter Absatz 2 genannten Personen durchgeführt werden, sollen diese zu Prüfenden bestellt werden, sofern die KIT-Fakultät eine Prüfungsbefugnis erteilt hat und sie die gemäß Absatz 2 Satz 2 vorausgesetzte Qualifikation nachweisen können.

(4) Die Beisitzenden werden durch die Prüfenden benannt. Zu Beisitzenden darf nur bestellt werden, wer einen akademischen Abschluss in einem mathematisch-naturwissenschaftlichen oder ingenieurwissenschaftlichen Studiengang oder einen gleichwertigen akademischen Abschluss erworben hat.

### **§ 18 Anerkennung von Studien- und Prüfungsleistungen, Studienzeiten**

(1) Studien- und Prüfungsleistungen sowie Studienzeiten, die in Studiengängen an staatlichen oder staatlich anerkannten Hochschulen und Berufsakademien der Bundesrepublik Deutschland oder an ausländischen staatlichen oder staatlich anerkannten Hochschulen erbracht wurden, werden auf Antrag der Studierenden anerkannt, sofern hinsichtlich der erworbenen Kompetenzen kein wesentlicher Unterschied zu den Leistungen oder Abschlüssen besteht, die ersetzt werden sollen. Dabei ist kein schematischer Vergleich, sondern eine Gesamtbetrachtung vorzunehmen. Bezüglich des Umfangs einer zur Anerkennung vorgelegten Studienleistung bzw. Prüfungsleistung (Anrechnung) werden die Grundsätze des ECTS herangezogen.

(2) Die Studierenden haben die für die Anerkennung erforderlichen Unterlagen vorzulegen. Studierende, die neu in den Masterstudiengang Maschinenbau immatrikuliert wurden, haben den Antrag mit den für die Anerkennung erforderlichen Unterlagen innerhalb eines Semesters nach Immatrikulation zu stellen. Bei Unterlagen, die nicht in deutscher oder englischer Sprache vorliegen, kann eine amtlich beglaubigte Übersetzung verlangt werden. Die Beweislast dafür, dass der Antrag die Voraussetzungen für die Anerkennung nicht erfüllt, liegt beim Prüfungsausschuss.

(3) Werden Leistungen angerechnet, die nicht am KIT erbracht wurden, werden sie im Zeugnis als „anerkannt“ ausgewiesen. Liegen Noten vor, werden die Noten, soweit die Notensysteme vergleichbar sind, übernommen und in die Berechnung der Modulnoten und der Gesamtnote einbezogen. Sind die Notensysteme nicht vergleichbar, können die Noten umgerechnet werden. Liegen keine Noten vor, wird der Vermerk „bestanden“ aufgenommen.

(4) Bei der Anerkennung von Studien- und Prüfungsleistungen, die außerhalb der Bundesrepublik Deutschland erbracht wurden, sind die von der Kultusministerkonferenz und der Hochschul-

rektorenkonferenz gebilligten Äquivalenzvereinbarungen sowie Absprachen im Rahmen der Hochschulpartnerschaften zu beachten.

(5) Außerhalb des Hochschulsystems erworbene Kenntnisse und Fähigkeiten werden angerechnet, wenn sie nach Inhalt und Niveau den Studien- und Prüfungsleistungen gleichwertig sind, die ersetzt werden sollen und die Institution, in der die Kenntnisse und Fähigkeiten erworben wurden, ein genormtes Qualitätssicherungssystem hat. Die Anrechnung kann in Teilen versagt werden, wenn mehr als 50 Prozent des Hochschulstudiums ersetzt werden soll.

(6) Zuständig für Anerkennung und Anrechnung ist der Prüfungsausschuss. Im Rahmen der Feststellung, ob ein wesentlicher Unterschied im Sinne des Absatz 1 vorliegt, sind die zuständigen Fachvertreter/innen zu hören. Der Prüfungsausschuss entscheidet in Abhängigkeit von Art und Umfang der anzurechnenden Studien- und Prüfungsleistungen über die Einstufung in ein höheres Fachsemester.

## II. Masterprüfung

### § 19 Umfang und Art der Masterprüfung

(1) Die Masterprüfung besteht aus den Modulprüfungen nach Absatz 2 und 3 sowie der Modul Masterarbeit (§ 14).

(2) Es sind Modulprüfungen im Pflichtfach „Vertiefung ingenieurwissenschaftlicher Grundlagen“ im Umfang von 50 LP abzulegen.

Die Festlegung der zur Auswahl stehenden Module wird im Modulhandbuch getroffen.

(3) Im Wahlpflichtbereich ist ein Wahlpflichtfach im Umfang von 40 LP zu absolvieren. Zur Auswahl steht mindestens das Fach „Allgemeiner Maschinenbau“. Die Festlegung der weiteren zur Auswahl stehenden Fächer und der den Fächern zugeordneten Module wird im Modulhandbuch getroffen.

### § 20 Bestehen der Masterprüfung, Bildung der Gesamtnote

(1) Die Masterprüfung ist bestanden, wenn alle in § 19 genannten Modulprüfungen mindestens mit „ausreichend“ bewertet wurden.

(2) Die Gesamtnote der Masterprüfung errechnet sich als ein mit Leistungspunkten gewichteter Notendurchschnitt der Fachnoten und dem Modul Masterarbeit.

(3) Haben Studierende die Masterarbeit mit der Note 1,0 und die Masterprüfung mit einem Durchschnitt von 1,2 oder besser abgeschlossen, so wird das Prädikat „mit Auszeichnung“ (with distinction) verliehen.

### § 21 Masterzeugnis, Masterurkunde, Diploma Supplement und Transcript of Records

(1) Über die Masterprüfung werden nach Bewertung der letzten Prüfungsleistung eine Masterurkunde und ein Zeugnis erstellt. Die Ausfertigung von Masterurkunde und Zeugnis soll nicht später als drei Monate nach Ablegen der letzten Prüfungsleistung erfolgen. Masterurkunde und Masterzeugnis werden in deutscher und englischer Sprache ausgestellt. Masterurkunde und Zeugnis tragen das Datum der erfolgreichen Erbringung der letzten Prüfungsleistung. Diese Dokumente werden den Studierenden zusammen ausgehändigt. In der Masterurkunde wird die Verleihung des akademischen Mastergrades beurkundet. Die Masterurkunde wird von dem Präsidenten und der KIT-Dekanin/ dem KIT-Dekan der KIT-Fakultät unterzeichnet und mit dem Siegel des KIT versehen.

(2) Das Zeugnis enthält die Fach- und Modulnoten sowie die den Modulen und Fächern zugeordnete Leistungspunkte und die Gesamtnote. Sofern gemäß § 7 Abs. 2 Satz 2 eine differenzier-

te Bewertung einzelner Prüfungsleitungen vorgenommen wurde, wird auf dem Zeugnis auch die entsprechende Dezimalnote ausgewiesen; § 7 Abs. 4 bleibt unberührt. Das Zeugnis ist von der KIT-Dekanin/ dem KIT-Dekan der KIT-Fakultät und von der/dem Vorsitzenden des Prüfungsausschusses zu unterzeichnen.

**(3)** Mit dem Zeugnis erhalten die Studierenden ein Diploma Supplement in deutscher und englischer Sprache, das den Vorgaben des jeweils gültigen ECTS Users' Guide entspricht, sowie ein Transcript of Records in deutscher und englischer Sprache.

**(4)** Das Transcript of Records enthält in strukturierter Form alle erbrachten Studien- und Prüfungsleistungen. Dies beinhaltet alle Fächer und Fachnoten samt den zugeordneten Leistungspunkten, die dem jeweiligen Fach zugeordneten Module mit den Modulnoten und zugeordneten Leistungspunkten sowie die den Modulen zugeordneten Erfolgskontrollen samt Noten und zugeordneten Leistungspunkten. Absatz 2 Satz 2 gilt entsprechend. Aus dem Transcript of Records soll die Zugehörigkeit von Lehrveranstaltungen zu den einzelnen Modulen deutlich erkennbar sein. Angerechnete Studien- und Prüfungsleistungen sind im Transcript of Records aufzunehmen. Alle Zusatzleistungen werden im Transcript of Records aufgeführt.

**(5)** Die Masterurkunde, das Masterzeugnis und das Diploma Supplement, einschließlich des Transcript of Records, werden vom Studierendenservice des KIT ausgestellt.

### III. Schlussbestimmungen

#### § 22 Bescheinigung von Prüfungsleistungen

Haben Studierende die Masterprüfung endgültig nicht bestanden, wird ihnen auf Antrag und gegen Vorlage der Exmatrikulationsbescheinigung eine schriftliche Bescheinigung ausgestellt, die die erbrachten Studien- und Prüfungsleistungen und deren Noten enthält und erkennen lässt, dass die Prüfung insgesamt nicht bestanden ist. Dasselbe gilt, wenn der Prüfungsanspruch erloschen ist.

#### § 23 Aberkennung des Mastergrades

**(1)** Haben Studierende bei einer Prüfungsleistung getäuscht und wird diese Tatsache nach der Aushändigung des Zeugnisses bekannt, so können die Noten der Modulprüfungen, bei denen getäuscht wurde, berichtigt werden. Gegebenenfalls kann die Modulprüfung für „nicht ausreichend“ (5,0) und die Masterprüfung für „nicht bestanden“ erklärt werden.

**(2)** Waren die Voraussetzungen für die Zulassung zu einer Prüfung nicht erfüllt, ohne dass die/der Studierende darüber täuschen wollte, und wird diese Tatsache erst nach Aushändigung des Zeugnisses bekannt, wird dieser Mangel durch das Bestehen der Prüfung geheilt. Hat die/der Studierende die Zulassung vorsätzlich zu Unrecht erwirkt, so kann die Modulprüfung für „nicht ausreichend“ (5,0) und die Masterprüfung für „nicht bestanden“ erklärt werden.

**(3)** Vor einer Entscheidung des Prüfungsausschusses ist Gelegenheit zur Äußerung zu geben.

**(4)** Das unrichtige Zeugnis ist zu entziehen und gegebenenfalls ein neues zu erteilen. Mit dem unrichtigen Zeugnis ist auch die Masterurkunde einzuziehen, wenn die Masterprüfung aufgrund einer Täuschung für „nicht bestanden“ erklärt wurde.

**(5)** Eine Entscheidung nach Absatz 1 und Absatz 2 Satz 2 ist nach einer Frist von fünf Jahren ab dem Datum des Zeugnisses ausgeschlossen.

**(6)** Die Aberkennung des akademischen Grades richtet sich nach § 36 Abs. 7 LHG.

**§ 24 Einsicht in die Prüfungsakten**

(1) Nach Abschluss der Masterprüfung wird den Studierenden auf Antrag innerhalb eines Jahres Einsicht in das Prüfungsexemplar ihrer Masterarbeit, die darauf bezogenen Gutachten und in die Prüfungsprotokolle gewährt.

(2) Für die Einsichtnahme in die schriftlichen Modulprüfungen, schriftlichen Modulteilprüfungen bzw. Prüfungsprotokolle gilt eine Frist von einem Monat nach Bekanntgabe des Prüfungsergebnisses.

(3) Der/die Prüfende bestimmt Ort und Zeit der Einsichtnahme.

(4) Prüfungsunterlagen sind mindestens fünf Jahre aufzubewahren.

**§ 25 Inkrafttreten, Übergangsvorschriften**

(1) Diese Studien- und Prüfungsordnung tritt am 01. Oktober 2016 in Kraft.

(2) Gleichzeitig tritt die Studien- und Prüfungsordnung des KIT für den Masterstudiengang Maschinenbau vom 28. Februar 2008 (Amtliche Bekanntmachung des KIT Nr. 79 vom 09. September 2008), zuletzt geändert durch Satzung vom 24. September 2014 (Amtliche Bekanntmachung des KIT Nr. 54 vom 01. Oktober 2014), außer Kraft.

(3) Studierende, die auf Grundlage der Studien- und Prüfungsordnung für den Masterstudiengang Maschinenbau vom 28. Februar 2008 (Amtliche Bekanntmachung des KIT Nr. 79 vom 09. September 2008), zuletzt geändert durch Satzung vom 24. September 2014 (Amtliche Bekanntmachung des KIT Nr. 54 vom 01. Oktober 2014), ihr Studium am KIT aufgenommen haben, können Prüfungen auf Grundlage dieser Studien- und Prüfungsordnung letztmalig am 30. September 2020 ablegen.

(4) Studierende, die auf Grundlage der Studien- und Prüfungsordnung für den Masterstudiengang Maschinenbau vom 28. Februar 2008 (Amtliche Bekanntmachung des KIT Nr. 79 vom 09. September 2008), zuletzt geändert durch Satzung vom 24. September 2014 (Amtliche Bekanntmachung des KIT Nr. 54 vom 01. Oktober 2014), ihr Studium am KIT aufgenommen haben, können auf Antrag ihr Studium nach der vorliegenden Studien- und Prüfungsordnung fortsetzen.

(5) Die Prüfungsordnung für den Diplomstudiengang Maschinenbau vom 27. Juli 2000 (Amtliche Bekanntmachung der Universität Karlsruhe (TH) Nr. 18 vom 15. August 2000, S. 107 ff.) bleibt außer Kraft. Studierende, die auf Grundlage der Prüfungsordnung für den Diplomstudiengang Maschinenbau vom 27. Juli 2000 (Amtliche Bekanntmachung der Universität Karlsruhe (TH) Nr. 18 vom 15. August 2000, S. 107 ff.) ihr Studium an der Universität Karlsruhe (TH) aufgenommen haben, können die Diplomprüfung einschließlich etwaiger Wiederholungen letztmalig bis zum 30. September 2017 ablegen.

<b>Satzung zur Änderung der Studien- und Prüfungsordnung des Karlsruher Instituts für Technologie (KIT) für den Master- studiengang Maschinenbau</b>	<b>28</b>
--	-----------

---

**Satzung zur Änderung der Studien- und Prüfungsordnung des Karlsruher Instituts für Technologie (KIT) für den Masterstudiengang Maschinenbau**

vom 21. Februar 2019

Aufgrund von § 10 Absatz 2 Ziff. 5 und § 20 Absatz 2 Satz 1 des Gesetzes über das Karlsruher Institut für Technologie (KIT-Gesetz - KITG) in der Fassung vom 14. Juli 2009 (GBl. S. 317 f), zuletzt geändert durch Artikel 2 des Gesetzes zur Weiterentwicklung des Hochschulrechts (HRWeitEG) vom 13. März 2018 (GBl. S. 85, 94), und § 32 Absatz 3 Satz 1 des Gesetzes über die Hochschulen in Baden-Württemberg (Landeshochschulgesetz - LHG) in der Fassung vom 1. Januar 2005 (GBl. S. 1 f), zuletzt geändert durch Artikel 1 des Gesetzes zur Weiterentwicklung des Hochschulrechts (HRWeitEG) vom 13. März 2018 (GBl. S. 85) hat der KIT-Senat am 18. Februar 2019 die folgende Satzung zur Änderung der Studien- und Prüfungsordnung für den Masterstudiengang Maschinenbau vom 04. August 2015 (Amtliche Bekanntmachung des Karlsruher Instituts für Technologie (KIT) Nr. 61 vom 06. August 2015) beschlossen.

Der Präsident hat seine Zustimmung gemäß § 20 Absatz 2 Satz 1 KITG i.V.m. § 32 Absatz 3 Satz 1 LHG am 21. Februar 2019 erteilt.

**Artikel 1 – Änderung der Studien- und Prüfungsordnung****1. § 12 Absatz 1 wird wie folgt geändert:**

## a) Satz 1 wird wie folgt gefasst:

„Es gelten die Vorschriften des Gesetzes zum Schutz von Müttern bei der Arbeit, in der Ausbildung und im Studium (Mutterschutzgesetz – MuSchG) in seiner jeweils geltenden Fassung.“

## b) Satz 2 wird aufgehoben.

## c) Die bisherigen Sätze 3 und 4 werden die Sätze 2 und 3

**2. § 14 wird wie folgt geändert:**

a) In Absatz 2 Satz 1 werden nach den Wörtern „Hochschullehrer/innen“ das Wort „und“ durch ein Komma ersetzt und nach der Angabe „§ 14 Abs. 3 Ziff. 1 KITG“ die Wörter „und habilitierten Mitgliedern der KIT-Fakultät für Maschinenbau“ eingefügt.

b) In Absatz 7 Satz 1 werden nach den Wörtern „Hochschullehrer/innen“ das Wort „oder“ durch ein Komma ersetzt und nach der Angabe „§ 14 abs. 3 Ziff. 1 KITG“ die Wörter „oder einem habilitierten Mitglied der KIT-Fakultät für Maschinenbau“ eingefügt.

**3. § 16 wird wie folgt geändert:**

a) In Absatz 1 Satz 3 wird das Wort „stammt“ durch die Wörter „stammen soll“ ersetzt.

b) In Absatz 7 Satz 4 werden nach dem Wort „Entscheidung“ die Wörter „schriftlich oder zur Niederschrift“ gestrichen.

**4. § 17 Absatz 3 wird wie folgt geändert:**

Nach dem Wort „sofern“ werden die Wörter „die KIT-Fakultät eine Prüfungsbefugnis erteilt hat und“ gestrichen.

**Artikel 2 – Inkrafttreten**

Diese Änderungssatzung tritt zum 01. April 2019 in Kraft.

Karlsruhe, den 21. Februar 2019

---

## **Satzung für den Zugang zu dem Masterstudiengang Maschinenbau am Karlsruher Institut für Technologie (KIT)**

vom 22. November 2017

Aufgrund von § 10 Abs. 2 Ziff. 6 und § 20 des KIT-Gesetzes (KITG), zuletzt geändert durch Artikel 4 des Gesetzes zur Änderung des Landeshochschulgebührengesetzes und anderer Gesetze vom 09. Mai 2017 (GBl. S. 245, 250), §§ 59 Abs. 1, 63 Abs. 2 des Landeshochschulgesetzes (LHG) in der Fassung vom 1. Januar 2005 (GBl. S. 1 f), zuletzt geändert durch Artikel 3 des Gesetzes zur Änderung des Landeshochschulgebührengesetzes und anderer Gesetze vom 09. Mai 2017 (GBl. S. 245, 250), hat der KIT-Senat in seiner Sitzung am 20. November 2017 die nachstehende Satzung beschlossen.

### **§ 1 Anwendungsbereich**

Die Satzung regelt den Zugang zu dem Masterstudiengang Maschinenbau am Karlsruher Institut für Technologie (im Folgenden: KIT).

### **§ 2 Fristen**

- (1) Eine Immatrikulation erfolgt sowohl zum Winter- als auch zum Sommersemester.
- (2) Der Antrag auf Immatrikulation einschließlich aller erforderlichen Unterlagen muss
  - für das **Wintersemester** bis zum **30. September eines Jahres**
  - für das **Sommersemester** bis zum **31. März eines Jahres**

beim KIT eingegangen sein.

### **§ 3 Form des Antrages**

- (1) Die Form des Antrags richtet sich nach den allgemeinen für das Zulassungs- und Immatrikulationsverfahren geltenden Bestimmungen in der jeweils gültigen Zulassungs- und Immatrikulationsordnung des KIT.
- (2) Dem Antrag sind folgende Unterlagen beizufügen:
  1. eine Kopie des Nachweises über den Bachelorabschluss oder gleichwertigen Abschluss gemäß § 5 Abs. 1 Nr. 1 samt Diploma Supplement und Transcript of Records (unter Angabe der erbrachten Leistungspunkte/ECTS),
  2. Nachweise der in § 5 Abs. 1 Nr. 3 genannten Mindestkenntnisse und Mindestleistungen, aus denen die Lernziele, Studieninhalte und Leistungspunkte hervorgehen, ggfs. Nachweis einer erfolgreichen Aufnahmeprüfung gemäß § 7 Abs. 2,
  3. ein Nachweis über ein mindestens 18-wöchiges Berufspraktikum, welches durch das Praktikantenamt der KIT-Fakultät für Maschinenbau anerkannt wurde (§ 6),
  4. eine schriftliche Erklärung der/des Bewerber/in darüber, ob sie/er in dem Masterstudiengang Maschinenbau oder einem verwandten Studiengang mit im Wesentlichen gleichem

Inhalt gemäß § 5 Abs. 2 eine nach der Prüfungsordnung erforderliche Prüfung endgültig nicht bestanden hat oder der Prüfungsanspruch aus sonstigen Gründen nicht mehr besteht,

5. Nachweise über die in § 5 Abs. 1 Nr. 5 a) oder b) genannten Sprachkenntnisse,
6. die in der jeweils gültigen Zulassungs- und Immatrikulationsordnung genannten weiteren Unterlagen.

Das KIT kann verlangen, dass diese der Zugangsentscheidung zugrundeliegenden Dokumente bei der Einschreibung im Original vorzulegen sind.

- (3) Die Immatrikulation in den Masterstudiengang Maschinenbau kann auch beantragt werden, wenn bis zum Ablauf der Bewerbungsfrist im Sinne des § 2 der Bachelorabschluss noch nicht vorliegt und aufgrund des bisherigen Studienverlaufs, insbesondere der bisherigen Studien- und Prüfungsleistungen zu erwarten ist, dass die/der Bewerber/in das Bachelorstudium rechtzeitig vor Beginn des Masterstudiengangs Maschinenbau abschließt.

In diesem Fall sind die bis zu diesem Zeitpunkt erbrachten Studien- und Prüfungsleistungen im Rahmen der Zugangsentscheidung zu berücksichtigen. Das spätere Ergebnis des Bachelorabschlusses bleibt unbeachtet. Der Bewerbung ist

- a) eine Bescheinigung über die bis zum Ende der Bewerbungsfrist erbrachten Prüfungsleistungen (z.B. Notenauszug) sowie
- b) eine Übersicht aller noch nicht nachgewiesenen Prüfungs- und Studienleistungen mit Angabe des Prüfungsdatums und des Nachweises der Prüfungsanmeldung beizulegen.

#### **§ 4 Zugangskommission**

- (1) Zur Vorbereitung der Zugangsentscheidung setzt die KIT-Fakultät eine Zugangskommission ein, die aus mindestens zwei Personen des hauptberuflich tätigen wissenschaftlichen Personals, davon einer/einem Professor/in, besteht. Ein/e studentische/r Vertreter/in kann mit beratender Stimme an den Zugangskommissionssitzungen teilnehmen. Eines der Mitglieder der Zugangskommission führt den Vorsitz.
- (2) Für den Fall, dass aufgrund hoher Bewerberzahlen mehrere Zugangskommissionen gebildet werden, findet zu Beginn des Zugangsverfahrens in einer gemeinsamen Sitzung eine Abstimmung der Bewertungsmaßstäbe unter dem Vorsitz der/des Studiendekans/Studiendekanin statt. Am Ende des Verfahrens kann eine gemeinsame Schlussbesprechung durchgeführt werden.
- (3) Die Zugangskommission berichtet dem KIT-Fakultätsrat nach Abschluss des Zugangsverfahrens über die gesammelten Erfahrungen und macht Vorschläge zur Verbesserung und Weiterentwicklung des Zugangsverfahrens.
- (4) Die Amtszeit der nicht studentischen Kommissionsmitglieder beträgt zwei Jahre, die des studentischen Kommissionsmitgliedes ein Jahr. Eine Wiederbestellung ist möglich.

#### **§ 5 Zugangsvoraussetzungen**

- (1) Voraussetzungen für den Zugang zum Masterstudiengang Maschinenbau sind:

1. Ein bestandener Bachelorabschluss oder mindestens gleichwertiger Abschluss in dem Studiengang Maschinenbau oder einem Studiengang mit im Wesentlichen gleichem Inhalt an einer Universität, Fachhochschule oder Berufsakademie bzw. Dualen Hochschule oder an einer ausländischen Hochschule; das Studium muss im Rahmen einer mindestens dreijährigen Regelstudienzeit und mit einer Mindestanzahl von 180 ECTS-Punkten absolviert worden sein;
  2. ein mindestens 18-wöchiges Berufspraktikum, welches durch das Praktikantenamt der KIT-Fakultät für Maschinenbau anerkannt wurde (§ 6);
  3. notwendige durch den Bachelorabschluss vermittelte Mindestkenntnisse und Mindestleistungen gemäß § 7;
  4. dass im Masterstudiengang Maschinenbau oder einem verwandten Studiengang mit im Wesentlichen gleichem Inhalt kein endgültiges Nichtbestehen einer nach der Prüfungsordnung erforderlichen Prüfung vorliegt und der Prüfungsanspruch auch aus sonstigen Gründen noch besteht;
  5. für Bewerber/innen, deren Muttersprache nicht Deutsch oder Englisch ist, der Nachweis von
    - a) ausreichenden Kenntnissen der deutschen Sprache gemäß den Voraussetzungen der Zulassungs- und Immatrikulationsordnung des KIT oder
    - b) ausreichenden Kenntnissen der englischen Sprache, nachgewiesen durch ein Zertifikat über das Kompetenzniveau B2 oder höher gemäß dem Gemeinsamen europäischen Referenzrahmen für Sprachen oder ein vergleichbares Zertifikat; als vergleichbar gelten ein Test of English as Foreign Language (TOEFL) mit mindestens 570 Punkten im paper-based TOEFL Test, 250 Punkten im computer-based TOEFL Test oder 88 Punkten im internet-based TOEFL Test sowie IELTS mit mindestens 6,5 Punkten. Der Nachweis englischer Sprachkenntnisse entfällt für Bewerber/innen, die ihren Bachelorabschluss in einem englischsprachigen Studiengang oder im englischsprachigen Ausland erworben haben. Die offizielle Sprache des Studienprogramms muss auf dem Abschlusszeugnis, dessen Ergänzung, im Transcript of Records oder in einer entsprechenden Bescheinigung der Hochschule vermerkt sein.
- (2) Als verwandte Studiengänge gemäß Absatz 1 Nr. 4 gelten insbesondere ein Masterstudiengang Mechatronik, Mechatronik und Informationstechnik, Werkstofftechnik, Materialwissenschaft und Werkstofftechnik, Werkstoffingenieurwesen, Fahrzeugtechnik, Kraftfahrzeugtechnik, Luft- und Raumfahrttechnik, Motorentchnik, Produktionstechnik, Fertigungstechnik, Automatisierungstechnik, Entwicklung und Konstruktion, Mechanik, Mechanical Engineering, Mechatronics, Mechatronics and Information Technology, Materials Science, Automotive Engineering, Aerospace Engineering, Production Systems Engineering, Manufacturing Technology, Conception and Production in Mechanical Engineering, Computational Mechanics, Computational Mechanics of Materials and Structures, Energy Technologies, Automation. Über die Gleichwertigkeit des Bachelorabschlusses im Sinne von Absatz 1 Nr. 1 sowie die Festlegung der Studiengänge mit im Wesentlichen gleichem Inhalt im Sinne von Absatz 1 Nr. 4 über Satz 1 hinaus entscheidet die Zugangskommission des Masterstudiengangs Maschinenbau im Benehmen mit dem Prüfungsausschuss des Masterstudiengangs Maschinenbau. Bei der Anerkennung von ausländischen Abschlüssen sind die Empfehlungen der Kultusministerkonferenz sowie die Absprachen im Rahmen von Hochschulpartnerschaften zu beachten.

### § 6 Berufspraktikum

(1) Der Zugang zum Masterstudiengang Maschinenbau setzt ein mindestens 18-wöchiges Berufspraktikum voraus. Davon sind mindestens zwölf Wochen als Fachpraktikum abzuleisten. Maximal sechs Wochen können als Grundpraktikum abgeleistet werden.

(2) Die Tätigkeiten im **Grundpraktikum** können aus folgenden Gebieten gewählt werden:

1. spanende Fertigungsverfahren,
2. umformende Fertigungsverfahren,
3. urformende Fertigungsverfahren und
4. thermische Füge- und Trennverfahren.

Es sollen Tätigkeiten in mindestens drei der o.g. Gebiete nachgewiesen werden.

(3) Die Tätigkeiten im **Fachpraktikum** müssen inhaltlich denen eines Ingenieurs entsprechen und können beispielsweise aus folgenden Gebieten gewählt werden:

1. Wärmebehandlung,
2. Werkzeug- und Vorrichtungsbau,
3. Planung von Instandhaltung, Wartung und Reparatur,
4. Planung von Messen, Prüfen und Qualitätskontrolle,
5. Oberflächentechnik,
6. Entwicklung, Konstruktion und Arbeitsvorbereitung,
7. Montage/Demontageplanung und
8. andere fachrichtungsbezogene Tätigkeiten

Näheres regelt die Praktikumsordnung für den Bachelor- und Masterstudiengang Maschinenbau der KIT-Fakultät für Maschinenbau.

(4) Über die Anerkennung des Berufspraktikums entscheidet das Praktikantenamt der KIT-Fakultät für Maschinenbau. Zur Anerkennung ist die Vorlage eines Tätigkeitsnachweises des Unternehmens (Zeugnis) im Original, das Dauer und Art der Tätigkeit während des Praktikums beschreibt, erforderlich. Tätigkeiten, die an Universitäten, gleichgestellten Hochschulen oder in vergleichbaren Forschungseinrichtungen durchgeführt wurden, werden grundsätzlich nicht als Fachpraktikum anerkannt.

(5) Liegt das Berufspraktikum bis zum Zeitpunkt der Antragsstellung noch nicht vor, kann die/der Bewerber/in im Einzelfall trotzdem unter der Auflage zugelassen werden, dass sie/er das Berufspraktikum bis zum Ende des Prüfungszeitraums des dritten Fachsemesters, spätestens aber bei der Anmeldung der Masterarbeit, nachweist. Eine etwaige Auflage wird von der Zulassungskommission festgesetzt und der/dem Bewerber/in im Rahmen der Zulassung mitgeteilt.

### § 7 Mindestkenntnisse und Mindestleistungen

(1) Die Zulassung zum Masterstudiengang Maschinenbau setzt den Nachweis voraus, dass sich der/die Bewerber/in mindestens in folgenden Fächern Fähigkeiten erworben hat, die nach Maßgabe der Lernziele, Inhalte und Leistungspunkte entsprechend des aktuellen Modulhandbuchs des Bachelorstudiengangs Maschinenbau zu denen im Bachelorstudiengang Maschinenbau am KIT gleichwertig sind:

1. Höhere Mathematik
2. Technische Thermodynamik und Wärmeübertragung
3. Technische Mechanik
4. Maschinenkonstruktionslehre
5. Werkstoffkunde
6. Strömungslehre
7. Mess- und Regelungstechnik
8. Elektrotechnik
9. Informatik.

Über die Gleichwertigkeit nach Satz 1 entscheidet die Zugangskommission des Masterstudiengangs Maschinenbau im Benehmen mit dem Prüfungsausschuss des Masterstudiengangs Maschinenbau.

(2) Sofern Bewerber die unter Absatz 1 beschriebenen Fähigkeiten nicht nachweisen können, können sie dennoch in den Studiengang immatrikuliert werden, sofern sie die für den Studiengang erforderlichen Fähigkeiten durch Bestehen einer schriftlichen Aufnahmeprüfung gemäß Anlage 1 am KIT nachweisen. Für einen erfolgreichen Nachweis darf die erfolgreiche Teilnahme an der Aufnahmeprüfung nicht länger als vier Bewerbungsverfahren zurückliegen. Ein Bewerbungsverfahren ist die auf einen bestimmten Studienbeginn bezogene Vergabe von Studienplätzen.

### § 8 Immatrikulationsentscheidung

(1) Die Entscheidung über das Erfüllen der Zugangsvoraussetzungen und die Immatrikulation trifft die/der Präsident/in auf Vorschlag der Zugangskommission.

(2) Die Immatrikulation ist zu versagen, wenn

- a) die Bewerbungsunterlagen nicht fristgemäß im Sinne des § 2 oder nicht vollständig im Sinne des § 3 vorgelegt wurden,
- b) die in § 5 geregelten Voraussetzungen nicht erfüllt sind,
- c) im Studiengang Maschinenbau oder in einem verwandten Studiengang mit im Wesentlichen gleichem Inhalt eine nach der Prüfungsordnung erforderliche Prüfung endgültig nicht bestanden wurde oder der Prüfungsanspruch aus sonstigen Gründen nicht mehr besteht (§ 60 Abs. 2 Nr. 2 LHG, § 9 Abs. 2 HZG).

Im Fall des § 3 Abs. 3 kann die Immatrikulation unter dem Vorbehalt zugesichert werden, dass der endgültige Nachweis über den Bachelorabschluss unverzüglich, spätestens bis zwei Monate nach Beginn des Semesters, für das die Immatrikulation beantragt wurde, nachgereicht wird. Wird der Nachweis nicht fristgerecht erbracht, erlischt die Zusicherung, und eine Immatrikulation erfolgt nicht. Hat die/der Bewerber/in die Fristüberschreitung nicht zu vertreten, hat sie/er dies gegenüber der Zugangskommission zu belegen und schriftlich nachzuweisen. Die Zugangskommission kann im begründeten Einzelfall die Frist für das Nachreichen des endgültigen Zeugnisses verlängern.

- (3) Erfüllt die/der Bewerber/in die Zugangsvoraussetzungen nicht und/oder kann sie/er nicht immatrikuliert werden, wird ihr/ihm das Ergebnis des Zugangsverfahrens schriftlich mitgeteilt. Der Bescheid ist zu begründen und mit einer Rechtsbehelfsbelehrung zu versehen.
- (4) Über den Ablauf des Zugangsverfahrens ist eine Niederschrift anzufertigen.
- (5) Im Übrigen bleiben die allgemein für das Zulassungs- und Immatrikulationsverfahren geltenden Bestimmungen in der Zulassungs- und Immatrikulationsordnung des KIT unberührt.

### **§ 9 Inkrafttreten**

Diese Satzung tritt am Tage nach ihrer Bekanntmachung in den Amtlichen Bekanntmachungen des KIT in Kraft. Sie gilt erstmals für das Bewerbungsverfahren zum Sommersemester 2018.

Gleichzeitig tritt die Satzung für das hochschuleigene Zulassungsverfahren im Masterstudien-gang Maschinenbau an der Universität Karlsruhe (TH) vom 28. Mai 2008 (Amtliche Bekanntma-chungen des KIT Nr. 22 vom 28. Mai 2008), zuletzt geändert durch Satzung vom 04. August 2015 (Amtliche Bekanntmachungen des KIT Nr. 63 vom 06. August 2015) außer Kraft.

Karlsruhe, den. 22. November 2017

*Prof. Dr. Holger Hanselka*  
(Präsident)

**Anlage 1****Aufnahmeprüfung****1. Zweck**

Die Aufnahmeprüfung soll zeigen, dass die/der Bewerber/in geeignet ist, den Masterstudiengang Maschinenbau erfolgreich zu absolvieren. Die Eignungsfeststellung erfolgt nach Maßgabe des Berufsbildes des Berufes/der Berufe, die dem Abschlussziel typischerweise folgen und anhand von Qualifikationen, die denen, welche im Bachelorstudiengang Maschinenbau am KIT erworben werden können, entsprechen.

**2. Anmeldung zur Prüfung**

2.1 Der Antrag auf Zulassung zur Aufnahmeprüfung erfolgt schriftlich bis spätestens 14 Tage vor dem Termin der Aufnahmeprüfung bei der KIT-Fakultät für Maschinenbau.

2.2 Dem Antrag ist der Nachweis über die Bewerbung für den Masterstudiengang Maschinenbau am KIT beizufügen.

2.3 Die Entscheidung über die Zulassung zur Aufnahmeprüfung gemäß Nr. 3 trifft die Zugangskommission der KIT-Fakultät für Maschinenbau (§ 4). Zur Aufnahmeprüfung zugelassene Bewerber erhalten eine Anmeldebestätigung.

**3. Zulassung zur Prüfung**

3.1 An der Aufnahmeprüfung nimmt nur teil, wer

- a) sich ordnungsgemäß zur Aufnahmeprüfung angemeldet hat,
- b) sich gemäß § 3 form- und fristgerecht für den Masterstudiengang Maschinenbau beworben hat und
- c) erklärt, dass er nicht bereits mehr als einmal an einer Aufnahmeprüfung am KIT im Masterstudiengang Maschinenbau erfolglos teilgenommen hat.

3.2 Die Teilnahme ist zu versagen, wenn die unter 3.1 genannten Voraussetzungen nicht erfüllt sind.

**4. Durchführung**

4.1 Die genauen Termine sowie der Ort der Aufnahmeprüfung werden spätestens sechs Wochen vor dem Prüfungstermin durch das KIT auf den Internetseiten der KIT-Fakultät für Maschinenbau bekannt gegeben.

4.2 Die Aufnahmeprüfung findet in schriftlicher Form statt und dauert 90 Minuten. Sie besteht aus vier Prüfungsteilen, die Fähigkeiten aus in § 7 Abs. 1 genannten Bereichen ermitteln und zu gleichen Teilen mit 25 Punkten bewertet werden. Die mit der Aufnahmeprüfung maximal erreichbare Punktzahl beträgt 100 Punkte. Die Aufnahmeprüfung kann zu Teilen auch im Wege des Antwort-Wahl-Verfahrens durchgeführt werden. In diesem Fall findet die Satzung zur Durchführung von Antwort-Wahl-Verfahren Anwendung.

4.3 Zur Bewertung der Aufnahmeprüfung setzt die Zugangskommission (§ 4) eine Prüfungskommission ein. Sie besteht aus mindestens zwei stimmberechtigten Mitgliedern, einem/einer Hochschullehrer/in / leitenden/leitender Wissenschaftler/in gemäß § 14 Abs. 3 Ziff. 1 KITG / Privatdozentin bzw. -dozenten, und einer akademischen Mitarbeiterin/ einem aka-

---

demischen Mitarbeiter nach § 52 LHG / wissenschaftlichen Mitarbeiterin/wissenschaftlichen Mitarbeiter gemäß § 14 Abs. 3 Ziff. 2 KITG sowie einer /einem Studierenden mit beratender Stimme. Die Amtszeit der nicht studentischen Kommissionsmitglieder beträgt zwei Jahre, die des studentischen Kommissionsmitgliedes ein Jahr. Eine Wiederbestellung ist möglich.

4.4 Die Aufnahmeprüfung wird mit 0 Punkten bewertet, wenn die/der Bewerber/in zum Prüfungstermin ohne wichtigen Grund nicht erscheint. Tritt die/der Bewerber/in nach Ausgabe der Prüfungsaufgaben von der Aufnahmeprüfung zurück, wird sie/er nach dem bis zu diesem Zeitpunkt erzielten Ergebnis bewertet. Die/der Bewerber/in ist berechtigt, erneut an einer Aufnahmeprüfung teilzunehmen, wenn unverzüglich nach dem Termin der Aufnahmeprüfung dem KIT angezeigt und glaubhaft gemacht wird, dass für das Fehlen am Termin oder den Rücktritt von der Prüfung ein wichtiger Grund vorgelegen hat; bei Krankheit ist ein ärztliches Attest vorzulegen.

4.5 Versucht die/der Bewerber/in das Ergebnis der Aufnahmeprüfung durch Täuschung oder Benutzung nicht zugelassener Hilfsmittel zu beeinflussen, wird die Prüfung mit 0 Punkten bewertet. Ein/e Bewerber/in, die/der den ordnungsgemäßen Ablauf der Prüfung stört, kann von dem jeweiligen Aufsichtsführenden von der Fortsetzung der Prüfung ausgeschlossen werden; in diesem Fall wird die Prüfung mit 0 Punkten bewertet.

4.6 Das KIT übernimmt keine Kosten, die durch die Aufnahmeprüfung für die Bewerber/innen entstehen.

## **5. Ermittlung der Eignung und Mitteilung des Ergebnisses**

5.1 Die Aufnahmeprüfung ist bestanden, wenn die/der Bewerber/in mindestens 75 Punkte, dabei mindestens 15 Punkte in jedem der vier Teilbereiche erreicht.

5.2 Die Zugangskommission (§ 4) stellt die Eignung der Bewerberin/ des Bewerbers auf Vorschlag der Prüfungskommission fest. Das Ergebnis der Aufnahmeprüfung wird den Bewerberinnen/Bewerbern schriftlich durch die KIT-Fakultät für Maschinenbau mitgeteilt. Der Bescheid ist zu begründen und mit einer Rechtsbehelfsbelehrung zu versehen.

## **6. Wiederholung**

Bewerber/innen, die einmal erfolglos an einer Aufnahmeprüfung für den Masterstudiengang Maschinenbau am KIT teilgenommen haben, können sich frühestens im nächsten Bewerbungszeitraum einmalig erneut zur Aufnahmeprüfung für diesen Studiengang anmelden. Eine weitere Wiederholung ist nicht möglich.

<b>Satzung zur Änderung der Satzung für den Zugang zu dem Masterstudiengang Maschinenbau am Karlsruher Institut für Technologie (KIT)</b>	<b>311</b>
---	------------

## **Satzung zur Änderung der Satzung für den Zugang zu dem Masterstudiengang Maschinenbau am Karlsruher Institut für Technologie (KIT)**

vom 28. November 2018

Aufgrund von § 10 Abs. 2 Ziff. 6 und § 20 des KIT-Gesetzes (KITG) in der Fassung vom 14. Juli 2009 (GBl. S. 317 ff), zuletzt geändert durch Artikel 2 des Gesetzes zur Weiterentwicklung des Hochschulrechts (HRWeitEG) vom 13. März 2018 (GBl. S. 85, 94), §§ 59 Abs. 1, 63 Abs. 2 des Landeshochschulgesetzes (LHG) in der Fassung vom 1. Januar 2005 (GBl. S. 1 ff), zuletzt geändert durch Artikel 1 des Gesetzes zur Weiterentwicklung des Hochschulrechts (HRWeitEG) vom 13. März 2018 (GBl. S. 85 ff.), hat der KIT-Senat in seiner Sitzung am 19. November 2018 die nachstehende Satzung beschlossen.

### **Artikel 1**

#### **1. § 3 Abs. 2 Ziff. 3 wird wie folgt geändert:**

Nach dem Wort „Berufspraktikum“ werden die Worte „welches durch das Praktikantenamt der KIT-Fakultät für Maschinenbau anerkannt wurde“ gestrichen.

#### **2. § 5 Abs. 1 Ziff. 3 wird wie folgt geändert:**

Nach dem Wort „notwendige“ werden die Worte „durch den Bachelorabschluss vermittelte“ gestrichen.

#### **3. § 5 Abs. 1 Ziff. 5 Buchst. b) erhält folgende Fassung:**

„b) ausreichenden englischen Sprachkenntnisse, die mindestens dem Niveau B2 des Gemeinsamen Europäischen Referenzrahmens für Sprachen (GER) oder gleichwertig entsprechen, nachgewiesen beispielsweise durch einen der folgenden international anerkannten Tests:

- aa) Test of English as Foreign Language (TOEFL) mit mindestens 550 Punkten im paper-based Test, oder 88 Punkten im internet-based Test oder
- bb) IELTS mit einem Gesamtergebnis von mindestens 6.5 und keiner Section unter 5.5.

Der Nachweis englischer Sprachkenntnisse entfällt für Bewerber/innen, die ihren Bachelorabschluss in einem englischsprachigen Studiengang oder im englischsprachigen Ausland erworben haben. Die offizielle Sprache des Studienprogramms muss auf dem Abschlusszeugnis, dessen Ergänzung, im Transcript of Records oder in einer entsprechenden Bescheinigung der Hochschule vermerkt sein.“

#### **4. § 6 Abs. 5 erhält folgende Fassung:**

„(5) Liegt das Berufspraktikum oder die Anerkennung des Praktikums bis zum Zeitpunkt der Antragsstellung noch nicht vor, kann die/der Bewerber/in im Einzelfall trotzdem unter der Auflage zugelassen werden, dass sie/er das Berufspraktikum bis zum Ende des Prüfungszeitraums des dritten Fachsemesters, spätestens aber bei der Anmeldung der Masterarbeit, nachweist. Eine etwaige Auflage wird von der Zulassungskommission festgesetzt und der/dem Bewerber/in im Rahmen der Zulassung mitgeteilt.“

**5. Anlage 1 Ziff. 5.1 erhält folgende Fassung:**

„5.1 Die Aufnahmeprüfung ist bestanden, wenn die/der Bewerber/in mindestens 50 Punkte, dabei mindestens 12 Punkte in jedem der vier Teilbereiche erreicht.“

**Artikel 2**

Diese Satzung tritt am Tage nach ihrer Bekanntmachung in den Amtlichen Bekanntmachungen des KIT in Kraft. Sie gilt erstmals für das Bewerbungsverfahren zum Sommersemester 2019.

---	-----

**Zweite Satzung zur Änderung der Satzung für den Zugang zu dem  
Masterstudiengang Maschinenbau am Karlsruher Institut für Technologie (KIT)**

vom 29. Juli 2019

Aufgrund von § 10 Abs. 2 Ziff. 6 und § 20 des KIT-Gesetzes (KITG) in der Fassung vom 14. Juli 2009 (GBl. S. 317 ff), zuletzt geändert durch Artikel 2 des Gesetzes zur Weiterentwicklung des Hochschulrechts (HRWeitEG) vom 13. März 2018 (GBl. S. 85, 94), §§ 59 Abs. 1, 63 Abs. 2 des Landeshochschulgesetzes (LHG) in der Fassung vom 1. Januar 2005 (GBl. S. 1 ff), zuletzt geändert durch Artikel 1 des Gesetzes zur Weiterentwicklung des Hochschulrechts (HRWeitEG) vom 13. März 2018 (GBl. S. 85 ff.), hat der KIT-Senat in seiner Sitzung am 15. Juli 2019 die nachstehende Satzung beschlossen.

**Artikel 1**

**Anlage 1 Ziff. 5.1 der Satzung für den Zugang zu dem Masterstudiengang Maschinenbau am Karlsruher Institut für Technologie (KIT) vom 22. November 2017 (Amtliche Bekanntmachung des KIT Nr. 68 vom 24. November 2017), zuletzt geändert durch Satzung vom 28. November 2018 (Amtliche Bekanntmachung des KIT Nr. 63 vom 28. November 2018), erhält folgende Fassung:**

„5.1 Die Aufnahmeprüfung ist bestanden, wenn die/der Bewerber/in mindestens 50 Punkte erreicht.“

**Artikel 2**

Diese Satzung tritt am Tage nach ihrer Bekanntmachung in den Amtlichen Bekanntmachungen des KIT in Kraft. Sie gilt erstmals für das Bewerbungsverfahren zum Wintersemester 2019/20.

M-MACH-102634	Major Field: Fluid Mechanic	16 CR
M-MACH-102619	Major Field: Technical Ceramics and Powder Materials	16 CR
M-MACH-102640	Major Field: Technical Logistics	16 CR
M-MACH-102635	Major Field: Engineering Thermodynamics	16 CR
M-MACH-102637	Major Field: Tribology	16 CR
M-MACH-102650	Major Field: Combustion Engines Based Powertrains	16 CR

**9.3.6 Specialization: Production Technology****Credits**

Part of: Specialization

40

<b>Mandatory</b>		
M-MACH-102742	Fundamentals and Methods of Production Technology	8 CR
<b>Major Field (p) (Election: between 1 and 2 items)</b>		
M-MACH-102629	Major Field: Logistics and Material Flow Theory	16 CR
M-MACH-102600	Major Field: Man - Technology - Organisation	16 CR
M-MACH-102618	Major Field: Production Technology	16 CR
<b>Major Field (Election: between 0 and 1 items)</b>		
M-MACH-102598	Major Field: Advanced Mechatronics	16 CR
M-MACH-102646	Major Field: Applied Mechanics	16 CR
M-MACH-102599	Major Field: Powertrain Systems	16 CR
M-MACH-102601	Major Field: Automation Technology	16 CR
M-MACH-102642	Major Field: Development of Innovative Appliances and Power Tools	16 CR
M-MACH-102605	Major Field: Engineering Design	16 CR
M-MACH-102624	Major Field: Information Technology	16 CR
M-MACH-102625	Major Field: Information Technology of Logistic Systems	16 CR
M-MACH-102626	Major Field: Integrated Product Development	16 CR
M-MACH-102609	Major Field: Cognitive Technical Systems	16 CR
M-MACH-102628	Major Field: Lightweight Construction	16 CR
M-MACH-102611	Major Field: Materials Science and Engineering	16 CR
M-MACH-102614	Major Field: Mechatronics	16 CR
M-MACH-102647	Major Field: Microactuators and Microsensors	16 CR
M-MACH-102616	Major Field: Microsystem Technology	16 CR
M-MACH-102630	Major Field: Mobile Machines	16 CR
M-MACH-104434	Major Field: Modeling and Simulation in Dynamics	16 CR
M-MACH-102632	Major Field: Polymer Engineering	16 CR
M-MACH-102633	Major Field: Robotics	16 CR
M-MACH-104443	Major Field: Vibration Theory	16 CR
M-MACH-102640	Major Field: Technical Logistics	16 CR
M-MACH-102637	Major Field: Tribology	16 CR

**9.3.7 Specialization: Theoretical Mechanical Engineering****Credits**

Part of: Specialization

40

<b>Mandatory</b>		
M-MACH-102743	Fundamentals and Methods of Theoretical Foundations of Mechanical Engineering	8 CR
<b>Major Field (p) (Election: between 1 and 2 items)</b>		
M-MACH-102646	Major Field: Applied Mechanics	16 CR
M-MACH-102604	Major Field: Computational Mechanics	16 CR
M-MACH-104434	Major Field: Modeling and Simulation in Dynamics	16 CR
M-MACH-104443	Major Field: Vibration Theory	16 CR
M-MACH-102634	Major Field: Fluid Mechanic	16 CR
<b>Major Field (Election: between 0 and 1 items)</b>		
M-MACH-105904	Major Field: Advanced Materials Modelling and Data Management <i>First usage possible from Apr 01, 2022.</i>	16 CR
M-MACH-102598	Major Field: Advanced Mechatronics	16 CR
M-MACH-102601	Major Field: Automation Technology	16 CR
M-MACH-102643	Major Field: Fusion Technology	16 CR
M-MACH-102624	Major Field: Information Technology	16 CR
M-MACH-102609	Major Field: Cognitive Technical Systems	16 CR
M-MACH-102611	Major Field: Materials Science and Engineering	16 CR
M-MACH-102614	Major Field: Mechatronics	16 CR
M-MACH-102633	Major Field: Robotics	16 CR
M-MACH-102635	Major Field: Engineering Thermodynamics	16 CR
M-MACH-102636	Major Field: Thermal Turbomachines	16 CR
M-MACH-102637	Major Field: Tribology	16 CR

**9.3.8 Specialization: Materials and Structures for High Performance Systems****Credits**

Part of: Specialization

40

<b>Mandatory</b>		
M-MACH-102744	Fundamentals and Methods of Materials and Structures for High Performance Systems	8 CR
<b>Major Field (p) (Election: between 1 and 2 items)</b>		
M-MACH-102611	Major Field: Materials Science and Engineering	16 CR
<b>Major Field (Election: between 0 and 1 items)</b>		
M-MACH-105904	Major Field: Advanced Materials Modelling and Data Management <i>First usage possible from Apr 01, 2022.</i>	16 CR
M-MACH-102646	Major Field: Applied Mechanics	16 CR
M-MACH-102628	Major Field: Lightweight Construction	16 CR
M-MACH-102632	Major Field: Polymer Engineering	16 CR
M-MACH-102619	Major Field: Technical Ceramics and Powder Materials	16 CR
M-MACH-102635	Major Field: Engineering Thermodynamics	16 CR
M-MACH-102636	Major Field: Thermal Turbomachines	16 CR
M-MACH-102637	Major Field: Tribology	16 CR

**9.4 Additional Examinations**

<b>Additional Examinations (Election: at most 30 credits)</b>		
M-FORUM-106753	Supplementary Studies on Science, Technology and Society <i>First usage possible from Oct 01, 2024.</i>	16 CR

## 10 Modules

**M**

### 10.1 Module: Compulsory Elective Module Mechanical Engineering (MSc-Modul 04, WF) [M-MACH-102597]

**Responsible:** Prof. Dr.-Ing. Bettina Frohnäpfel

**Organisation:** KIT Department of Mechanical Engineering

**Part of:** Advanced Engineering Fundamentals

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
8	Grade to a tenth	Each term	1 term	German/English	4	14

Compulsory Elective Module Mechanical Engineering (Election: 2 items)			
T-MACH-105173	Analysis of Exhaust Gas and Lubricating Oil in Combustion Engines	4 CR	Gohl
T-MACH-105437	Aerothermodynamics	4 CR	Frohnäpfel, Seiler
T-MACH-105215	Applied Tribology in Industrial Product Development	4 CR	Albers, Lorentz, Matthiesen
T-MACH-105527	Applied Materials Simulation	4 CR	Gumbsch, Schneider
T-MACH-110929	Applied Materials Simulation	4 CR	Gumbsch, Schneider
T-MACH-105307	Drive Train of Mobile Machines	4 CR	Geimer
T-MACH-105649	Boosting of Combustion Engines	4 CR	Kech, Kubach
T-MACH-113412	Atomistic Simulations and Particle Dynamics	4 CR	Gumbsch, Schneider, Weygand
T-MACH-102141	Constitution and Properties of Wearresistant Materials	4 CR	Ulrich
T-MACH-105150	Constitution and Properties of Protective Coatings	4 CR	Ulrich
T-MACH-105381	Virtual Engineering (Specific Topics)	4 CR	Ovtcharova
T-MACH-105428	Selected Chapters of the Combustion Fundamentals	4 CR	Maas
T-MACH-105462	Selected Problems of Applied Reactor Physics and Exercises	4 CR	Dagan
T-MACH-105310	Design of Highly Stressed Components	4 CR	Aktaa
T-MACH-105311	Design and Development of Mobile Machines	4 CR	Geimer
T-MACH-110958	Design and Optimization of Conventional and Electrified Automotive Transmissions	4 CR	Faust
T-MACH-106424	Rail System Technology	4 CR	Cichon
T-MACH-113359	Boosting the Modern Energy Landscape via Turbo Machines & Machine Learning	4 CR	Bauer
T-MACH-109933	Business Administration for Engineers and IT Professionals	4 CR	Sebregondi
T-MACH-111623	Fuels and Lubricants for Engine Powertrains	4 CR	Kehrwald, Kubach
T-MACH-105184	Fuels and Lubricants for Combustion Engines	4 CR	Kehrwald, Kubach
T-MACH-112817	Biomedical Engineering for Engineers - Fundamentals of Project Management in Medical Engineering	4 CR	Ahrens, Guber, Rajabi
T-MACH-100966	BioMEMS - Microsystems Technologies for Life-Sciences and Medicine I	4 CR	Guber
T-MACH-100967	BioMEMS - Microsystems Technologies for Life-Sciences and Medicine II	4 CR	Guber
T-MACH-100968	BioMEMS - Microsystems Technologies for Life-Sciences and Medicine III	4 CR	Guber
T-MACH-106877	BioMEMS - Microsystems Technologies for Life-Sciences and Medicine IV	4 CR	Ahrens, Guber
T-MACH-105212	CAE-Workshop	4 CR	Düser
T-MACH-105407	CFD for Power Engineering	4 CR	Otic
T-MACH-105314	Computational Intelligence	4 CR	Meisenbacher, Mikut, Reischl
T-MACH-105694	Data Analytics for Engineers	5 CR	Meisenbacher, Mikut, Reischl

T-MACH-113597	Decision-Making and Motion Planning for Automated Driving	6 CR	Naumann, Werling
T-MACH-108719	Designing with numerical methods in product development	4 CR	Schnack
T-MACH-105540	Railways in the Transportation Market	4 CR	Cichon
T-MACH-108721	Designing with Composites	4 CR	Schnack
T-MACH-113016	Digitization in the Railway System	4 CR	Cichon
T-MACH-105317	Digital Control	4 CR	Knoop
T-MACH-105226	Dynamics of the Automotive Drive Train	4 CR	Fidlin
T-MACH-111807	Introduction to Bionics	4 CR	Hölscher
T-MACH-105320	Introduction to the Finite Element Method	3 CR	Böhlke, Langhoff
T-MACH-108718	Introduction to numerical mechanics	4 CR	Schnack
T-MACH-105525	Introduction to Nuclear Energy	4 CR	Cheng
T-MACH-105321	Introduction to Theory of Materials	4 CR	Kamlah
T-MACH-100535	Introduction into Mechatronics	6 CR	Orth, Reischl
T-MACH-105209	Introduction to Multi-Body Dynamics	5 CR	Fidlin
T-MACH-111814	Introduction to Nanotechnology	4 CR	Hölscher
T-MACH-105439	Introduction to Nonlinear Vibrations	7 CR	Fidlin
T-MACH-105151	Energy Efficient Intralogistic Systems	4 CR	Kramer, Schönung
T-MACH-105952	Energy Storage and Network Integration	4 CR	Schmidt
T-MACH-105408	Energy Systems I: Renewable Energy	4 CR	Dagan
T-MACH-110817	Development of Hybrid Drivetrains	4 CR	Koch
T-MACH-105984	Fatigue of Welded Components and Structures	3 CR	Farajian
T-MACH-105228	Organ Support Systems	4 CR	Pylatiuk
T-MACH-105512	Experimental Fluid Mechanics	4 CR	Kriegseis
T-MACH-106373	Experimental Techniques in Thermo- and Fluid-dynamics	4 CR	Cheng
T-MACH-105152	Handling Characteristics of Motor Vehicles I	4 CR	Unrau
T-MACH-105153	Handling Characteristics of Motor Vehicles II	4 CR	Unrau
T-MACH-107667	Solid State Reactions and Kinetics of Phase	4 CR	Franke, Seifert
T-MACH-105237	Vehicle Lightweight Design - Strategies, Concepts, Materials	4 CR	Henning
T-MACH-102207	Tires and Wheel Development for Passenger Cars	4 CR	Leister
T-MACH-105218	Automotive Vision	6 CR	Lauer, Stiller
T-MACH-113069	Vehicle Systems for Urban Mobility	4 CR	Cichon
T-MACH-105535	Composite Manufacturing - Polymers, Fibers, Semi-Finished Products, Manufacturing Technologies	4 CR	Henning
T-MACH-102166	Fabrication Processes in Microsystem Technology	4 CR	Bade
T-MACH-105474	Fluid-Structure-Interaction	4 CR	Frohnapfel, Mühlhausen
T-MACH-102093	Fluid Power Systems	4 CR	Geimer
T-MACH-105411	Fusion Technology A	4 CR	Perez Martin, Weiss
T-MACH-105433	Fusion Technology B	4 CR	Perez Martin, Rieth
T-MACH-105444	Combined Cycle Power Plants	4 CR	Banuti, Schulenberg
T-MACH-105467	Microstructure Characteristics Relationships	6 CR	Gruber, Kraft
T-MACH-105157	Foundry Technology	4 CR	Günther, Klan
T-MACH-111003	Global Logistics	4 CR	Furmans
T-MACH-110991	Global Production	4 CR	Lanza
T-MACH-110816	Large Diesel and Gas Engines for Ship Propulsions	4 CR	Kubach
T-MACH-102117	Automotive Engineering II	4 CR	Gießler
T-MACH-102111	Principles of Ceramic and Powder Metallurgy Processing	4 CR	Schell
T-MACH-105044	Fundamentals of Catalytic Exhaust Gas Aftertreatment	4 CR	Deutschmann, Grunwaldt, Kubach, Lox
T-MACH-105235	Principles of Medicine for Engineers	4 CR	Pylatiuk
T-MACH-105324	Foundations of Nonlinear Continuum Mechanics	4 CR	Kamlah
T-MACH-105213	Fundamentals of Combustion I	4 CR	Maas

T-MACH-105325	Fundamentals of Combustion II	4 CR	Bykov, Maas
T-MACH-105424	Optical Flow Measurement: Fundamentals and Applications	4 CR	Frohnapfel, Seiler
T-MACH-105398	High Performance Computing	5 CR	Nestler, Selzer
T-MACH-105459	High Temperature Materials	4 CR	Heilmaier
T-MACH-114175	Human Factors Engineering I (Workplace Design)	4 CR	Deml
T-MACH-114176	Human Factors Engineering II (Organizational Design)	4 CR	Deml
T-MACH-106374	Human-oriented Productivity Management: Personnel Management	4 CR	Stock
T-MACH-105425	Hydrodynamic Stability: From Order to Chaos	4 CR	Class
T-MACH-105375	Industrial Aerodynamics	4 CR	Frohnapfel, Kröber
T-MACH-112882	Innovation2Business – Innovation Strategy in the Industrial Corporate Practice	4 CR	Albers
T-MACH-113068	Innovation and Project Management in Rail Vehicle Engineering	4 CR	Cichon
T-MACH-105404	Innovative Nuclear Systems	4 CR	Cheng
T-MACH-110334	International Production Engineering A	4 CR	Fleischer
T-MACH-110335	International Production Engineering B	4 CR	Fleischer
T-MACH-114100	Introduction to Microsystem Technology I	4 CR	Badilita, Korvink
T-MACH-114101	Introduction to Microsystem Technology II	4 CR	Badilita, Korvink
T-MACH-105466	Introduction to Neutron Cross Section Theory and Nuclear Data Generation	4 CR	Dagan
T-MACH-100287	Introduction to Ceramics	6 CR	Schell
T-MACH-102182	Ceramic Processing Technology	4 CR	Binder
T-MACH-105402	Nuclear Power Plant Technology	4 CR	Badea, Cheng
T-MACH-105330	Design with Plastics	4 CR	Liedel
T-MACH-100293	Structural Materials	6 CR	Guth
T-MACH-105221	Lightweight Engineering Design	4 CR	Düser, Ott
T-MACH-110377	Continuum Mechanics of Solids and Fluids	3 CR	Böhlke, Frohnapfel
T-MACH-105786	Contact Mechanics	4 CR	Greiner
T-MACH-112115	Artificial Intelligence in Production	4 CR	Fleischer
T-MACH-105164	Laser in Automotive Engineering	4 CR	Schneider
T-MACH-112763	Laser Material Processing	4 CR	Schneider
T-MACH-105231	Leadership and Management Development	4 CR	Ploch
T-MACH-110954	Lightweight Constructions with Fiber-Reinforced-Polymers – Theory and Practice	4 CR	Kärger, Liebig
T-MACH-113064	Machine Learning for Robotic Systems 1	5 CR	Rayyes
T-MACH-105426	Magnetohydrodynamics	4 CR	Bühler
T-MACH-105434	Magnet Technology of Fusion Reactors	4 CR	Weiss, Wolf
T-MACH-105224	Machine Dynamics II	4 CR	Proppe
T-MACH-108957	Mathematical Fundamentals of Numerical Mechanics	4 CR	Schnack
T-MACH-105293	Mathematical Methods in Dynamics	6 CR	Proppe
T-MACH-105294	Mathematical Methods of Vibration Theory	6 CR	Fidlin
T-MACH-105295	Mathematical Methods in Fluid Mechanics	6 CR	Frohnapfel, Gatti
T-MACH-113942	Mathematical Models and Methods of the Theory of Thermochemical Processes	4 CR	Bykov
T-MACH-105189	Mathematical Models and Methods for Production Systems	6 CR	Baumann, Furmans
T-MACH-114062	Mathematical Models and Methods of the Theory of Thermochemical Processes	4 CR	Bykov
T-MACH-108717	Mechanics of Laminated Composites	4 CR	Schnack
T-MACH-105333	Mechanics and Strength of Polymers	4 CR	von Bernstorff
T-MACH-105334	Mechanics in Microtechnology	4 CR	Greiner, Gruber
T-MACH-105468	Metals	6 CR	Heilmaier, Pundt
T-MACH-105167	Analysis Tools for Combustion Diagnostics	4 CR	Pfeil
T-MACH-105557	Microenergy Technologies	4 CR	Kohl, Xu
T-MACH-101910	Microactuators	4 CR	Kohl

T-MACH-105303	Modelling of Microstructures	5 CR	August, Nestler
T-MACH-111030	Micro- and nanotechnology in implant technology	4 CR	Ahrens, Doll
T-MACH-102199	Model Based Application Methods	4 CR	Kirschbaum
T-MACH-105396	Modeling of Thermodynamical Processes	6 CR	Maas, Schießl
T-MACH-100300	Modelling and Simulation	4 CR	Gumbsch, Nestler
T-MACH-113367	Modeling of Polymer and Suspension Flows for Industrial Manufacturing Processes	4 CR	Kärger, Wittemann
T-MACH-114061	Model Reduction Methods for Modeling and Simulation of Reacting Flows	4 CR	Bykov
T-MACH-105169	Engine Measurement Techniques	4 CR	Bernhardt
T-MACH-111578	Sustainable Vehicle Drivetrains	4 CR	Koch, Toedter
T-MACH-102167	Nanotribology and -Mechanics	4 CR	Dienwiebel, Hölscher
T-MACH-111026	Nonlinear Continuum Mechanics	6 CR	Böhlke
T-MACH-108720	Numerical Mechanics for Industrial Applications	4 CR	Schnack
T-MACH-105420	Numerical Simulation of Multi-Phase Flows	4 CR	Wörner
T-MACH-105339	Numerical Simulation of Reacting Two Phase Flows	4 CR	Koch
T-MACH-105397	Numerical Simulation of Turbulent Flows	4 CR	Grötzbach
T-MACH-105338	Numerical Fluid Mechanics	4 CR	Frohnapfel, Gatti
T-MACH-105442	Intellectual Property Rights and Strategies in Industrial Companies	4 CR	Zacharias
T-MACH-100530	Physics for Engineers	5 CR	Dienwiebel, Gumbsch, Nesterov-Müller, Weygand
T-MACH-102102	Physical Basics of Laser Technology	5 CR	Schneider
T-MACH-105516	Multi-Scale Plasticity	4 CR	Greiner, Schulz
T-MACH-102181	PLM for Product Development in Mechatronics	4 CR	Eigner
T-MACH-102137	Polymer Engineering I	4 CR	Liebig
T-MACH-102138	Polymer Engineering II	4 CR	Liebig
T-MACH-102192	Polymers in MEMS A: Chemistry, Synthesis and Applications	4 CR	Rapp
T-MACH-102191	Polymers in MEMS B: Physics, Microstructuring and Applications	4 CR	Worgull
T-MACH-102200	Polymers in MEMS C: Biopolymers and Bioplastics	4 CR	Rapp, Worgull
T-MACH-113713	Practical Course: Autonomous Driving	6 CR	Frey, Gießler
T-MACH-113873	Probabilistic Measurement and Estimation	4 CR	Stiller
T-MACH-105147	Product Lifecycle Management	4 CR	Ovtcharova
T-MACH-110318	Product- and Production-Concepts for Modern Automobiles	4 CR	Kienzle, Steegmüller
T-MACH-102155	Product, Process and Resource Integration in the Automotive Industry	4 CR	Mbang
T-MACH-110984	Production Technology for E-Mobility	4 CR	Fleischer
T-MACH-105523	Productivity Management in Production Systems	4 CR	Stowasser
T-MACH-102156	Project Workshop: Automotive Engineering	6 CR	Frey, Gießler
T-MACH-105441	Development of Oil-Hydraulic Powertrain Systems	4 CR	Geerling, Geimer
T-MACH-105348	Process Simulation in Forming Operations	4 CR	Helm
T-MACH-102157	High Performance Powder Metallurgy Materials	4 CR	Schell
T-MACH-102107	Quality Management	4 CR	Lanza
T-MACH-105405	Reactor Safety I: Fundamentals	4 CR	Sanchez-Espinoza
T-MACH-105350	Computational Vehicle Dynamics	4 CR	Proppe
T-MACH-105351	Computational Mechanics I	6 CR	Böhlke, Langhoff
T-MACH-105352	Computational Mechanics II	6 CR	Böhlke, Langhoff
T-MACH-114060	Model Reduction Methods for Modeling and Simulation of Reacting Flows	4 CR	Bykov
T-MACH-111888	Re:Invent - Revolutionary Business Models as the Basis for Product Innovations	4 CR	Schneider
T-MACH-109122	X-ray Optics	4 CR	Last
T-MACH-105724	Failure Analysis	4 CR	Greiner, Schneider
T-MACH-105353	Rail Vehicle Technology	4 CR	Cichon

T-MACH-112106	Fatigue of Materials	4 CR	Guth
T-MACH-112121	Seminar Application of Artificial Intelligence in Production	4 CR	Fleischer
T-INFO-109911	Safe Human-Robot-Collaboration	3 CR	Kurth
T-MACH-105171	Safety Engineering	4 CR	Kany
T-MACH-105971	Simulation of the Process Chain of Continuously Fiber Reinforced Composite Structures	4 CR	Kärger
T-MACH-105172	Simulation of Coupled Systems	4 CR	Geimer
T-MACH-105400	Scaling in Fluid Dynamics	4 CR	Bühler
T-MACH-106493	Solar Thermal Energy Systems	4 CR	Dagan
T-MACH-105372	Theory of Stability	6 CR	Fidlin
T-MACH-111821	Control of Mobile Machines	4 CR	Becker, Geimer
T-MACH-105185	Control Technology	4 CR	Gönnheimer
T-MACH-105696	Strategic Product Development - Identification of Potentials of Innovative Products	3 CR	Siebe
T-MACH-105422	Flows with Chemical Reactions	4 CR	Class
T-MACH-105403	Flows and Heat Transfer in Energy Technology	4 CR	Cheng
T-MACH-102170	Structural and Phase Analysis	4 CR	Wagner
T-MACH-105970	Structural Analysis of Composite Laminates	4 CR	Kärger
T-MACH-102103	Superhard Thin Film Materials	4 CR	Ulrich
T-MACH-114033	Sustainable Product Engineering: Sustainable Product Design - Long-term Business Success with Sustainably Developed Products	4 CR	Ziegahn
T-MACH-105555	System Integration in Micro- and Nanotechnology	4 CR	Gengenbach
T-MACH-110272	System Integration in Micro- and Nanotechnology 2	4 CR	Gengenbach
T-MACH-111382	Technical Acoustics	4 CR	Pantle, Walter
T-MACH-105652	Fundamentals of Combustion Engine Technology	5 CR	Bernhardt, Kubach, Pfeil, Toedter, Wagner
T-MACH-102083	Integrated Information Systems for Engineers	4 CR	Ovtcharova
T-MACH-105361	Technical Design in Product Development	4 CR	Albers, Matthiesen, Schmid
T-MACH-105362	Technology of Steel Components	4 CR	Schulze
T-MACH-105456	Ten Lectures on Turbulence	4 CR	Otic
T-MACH-105363	Thermal Turbomachines I	6 CR	Bauer
T-MACH-105364	Thermal Turbomachines II	6 CR	Bauer
T-MACH-107670	Fundamentals in Materials Thermodynamics and Heterogeneous Equilibria	4 CR	Franke, Seifert
T-MACH-106372	Thermal-Fluid-Dynamics	4 CR	Ruck
T-MACH-105423	Tractors	4 CR	Geimer, Kremmer
T-MACH-105366	Turbo Jet Engines	4 CR	Bauer
T-MACH-111591	Turbo Charging of Internal Combustion Engines	4 CR	Kech, Kubach
T-MACH-105177	Metal Forming	4 CR	Herlan
T-MACH-105429	Combustion Diagnostics	4 CR	Maas
T-MACH-102139	Failure of Structural Materials: Fatigue and Creep	4 CR	Gruber, Gumbsch
T-MACH-102140	Failure of Structural Materials: Deformation and Fracture	4 CR	Gumbsch, Weygand
T-MACH-102148	Gear Cutting Technology	4 CR	Klaiber
T-MACH-102123	Virtual Engineering I	4 CR	Ovtcharova
T-MACH-102124	Virtual Engineering II	4 CR	Ovtcharova
T-MACH-105430	Heatpumps	4 CR	Maas, Wirbser
T-MACH-105529	Heat Transfer in Nuclear Reactors	4 CR	Cheng
T-MACH-113362	Heat Transfer and Cooling at Thermally Highly Loaded Components	4 CR	Bauer, Schmid
T-MACH-105416	Hydrogen Technologies	4 CR	Jedicke, Jordan
T-MACH-105211	Materials of Lightweight Construction	4 CR	Liebig
T-MACH-105369	Materials Modelling: Dislocation Based Plasticity	4 CR	Weygand
T-MACH-100532	Scientific Computing for Engineers	4 CR	Gumbsch, Weygand
T-MACH-105985	Ignition Systems	4 CR	Toedter

T-MACH-111840	Reliability and Test Engineering	5 CR	Gwosch
<b>Compulsory Elective Module Mechanical Engineering (Ü) (Election: )</b>			
T-MACH-108887	Design and Development of Mobile Machines - Advance <i>This item will not influence the grade calculation of this parent.</i>	0 CR	Geimer, Siebert
T-MACH-108889	BUS-Controls - Advance <i>This item will not influence the grade calculation of this parent.</i>	0 CR	Geimer
T-MACH-110928	Exercises for Applied Materials Simulation	2 CR	Gumbsch, Schneider
T-MACH-108888	Simulation of Coupled Systems - Advance <i>This item will not influence the grade calculation of this parent.</i>	0 CR	Geimer
T-MACH-110396	Strategic Product Development - Identification of Potentials of Innovative Products - Case Study <i>This item will not influence the grade calculation of this parent.</i>	1 CR	Albers, Matthiesen, Siebe
T-MACH-111820	Control of Mobile Machines – Prerequisites	0 CR	Becker, Geimer
T-MACH-111027	Tutorial Nonlinear Continuum Mechanics	2 CR	Böhlke
T-MACH-109304	Exercices - Fatigue of Welded Components and Structures <i>This item will not influence the grade calculation of this parent.</i>	1 CR	Farajian
T-MACH-107671	Exercises for Applied Materials Simulation <i>This item will not influence the grade calculation of this parent.</i>	2 CR	Gumbsch, Schneider
T-MACH-110330	Tutorial Introduction to the Finite Element Method	1 CR	Böhlke, Langhoff
T-MACH-107632	Exercises for Solid State Reactions and Kinetics of Phase Transformations <i>This item will not influence the grade calculation of this parent.</i>	2 CR	Franke, Seifert
T-MACH-110333	Tutorial Continuum Mechanics of Solids and Fluids	1 CR	Böhlke, Frohnappel
T-MACH-107669	Exercises for Fundamentals in Materials Thermodynamics and Heterogeneous Equilibria <i>This item will not influence the grade calculation of this parent.</i>	2 CR	Seifert

**Competence Certificate**

written or oral exam

**Prerequisites**

none

**Competence Goal**

The students have deepened their knowledge in selected areas of mechanical engineering. Due to the broad variety of eligible courses, they have supplemented / sharpened their own competence profile in mechanical engineering individually and precisely..

The specific learning outcomes are defined by the respective coordinator of the course.

**Content**

see chosen brick courses.

**Module grade calculation**

Average of exams (with equal weight).

**Workload**

The work load is about 240 hours, corresponding to 8 credit points. The work load varies from lecture to lecture, for example a lecture consisting of 4 credit points includes 28 h of presence during the lecture and 92 h preparation and rework time at home, 120 hours in total.

**Learning type**

Lecture, Tutorial, Lab Course

## M

**10.2 Module: Compulsory Elective Module Natural Science/Computer Science/  
Electrical Engineering (MSc-Modul WPF-Modul NIE) [M-MACH-102595]****Responsible:** Prof. Dr. Ulrich Maas**Organisation:** KIT Department of Mechanical Engineering**Part of:** [Advanced Engineering Fundamentals](#)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
6	pass/fail	Each term	1 term	German/English	4	10

**Election notes**

One or more brick courses, with a total of at least 6 CP, must be successfully completed.

Compulsory Elective Module Natural Science/Computer Science/Electrical Engineering (Election: )			
T-CHEMBIO-100302	<a href="#">Applied Chemistry</a> <i>This item will not influence the grade calculation of this parent.</i>	4 CR	Deutschmann, Grunwaldt, Meier, Théato
T-MACH-108847	<a href="#">Applied Mathematics in Natural Science: Flows with chemical reactions</a> <i>This item will not influence the grade calculation of this parent.</i>	6 CR	Class

T-CIWVT-111062	<b>Cell Biology</b> <i>This item will not influence the grade calculation of this parent.</i>	3 CR	Gottwald

**Competence Certificate**

The success is monitored within the framework of academic achievements, it can vary according to the individually choice. The module is not graded, and remains not graded even after the choice of one or several graded brick courses.

**Prerequisites**

none

**Competence Goal**

After completing the elective module "Wahlpflichtmodul" the attendants are able to extend their knowledge in the field of mechanical engineering in the disciplines natural sciences, electrical engineering or the informatics. The attendants are aware of typical approaches in fields, that differ sufficiently from mechanical engineering and know specific methods and fundamentals of these fields. Thus, the attendants are able to solve interdisciplinary problems by applying this knowledge and to adopt specialist skills by themselves later.

**Content**

Please refer to the description of the listed brick courses.

**Workload**

The work load is about 180 hours, corresponding to 6 credit points.

**Learning type**

Lecture

Exercise course (depending on the course)

## M

**10.3 Module: Compulsory Elective Subject Economics/Law (MSc-Modul WPF-Modul WR) [M-MACH-102596]****Responsible:** Prof. Dr.-Ing. Kai Furmans**Organisation:** KIT Department of Mechanical Engineering**Part of:** [Advanced Engineering Fundamentals](#)

<b>Credits</b> 4	<b>Grading scale</b> pass/fail	<b>Recurrence</b> Each term	<b>Duration</b> 1 term	<b>Language</b> German	<b>Level</b> 4	<b>Version</b> 6
---------------------	-----------------------------------	--------------------------------	---------------------------	---------------------------	-------------------	---------------------

<b>Compulsory Elective Module Economics/Law (Election: 1 item)</b>			
T-MACH-112585	<a href="#">Leadership and Management Development</a>	4 CR	Albers, Matthiesen, Ploch
T-INFO-112672	<a href="#">Public Law I &amp; II</a>	6 CR	N.N.
T-MACH-112586	<a href="#">Quality Management</a>	4 CR	Lanza
T-GEISTSOZ-110845	<a href="#">Technical and Environmental Historical Perspectives on Current Innovation Processes</a>	4 CR	Popplow

**Competence Certificate**

The success is monitored within the framework of academic achievements, it can vary according to the individually choice.

**Prerequisites**

none

**Competence Goal**

Students can enlarge their knowledge about law and economics which affect mechanical engineering self-determined. They are able to describe circumstances of the case considering law or economics and apply it to simple cases. Later on in work life, they are able to evaluate, if and which subject specific support is necessary.

**Content**

see chosen brick course

**Module grade calculation**

The module is not graded, and remains not graded even after the choice of one or several graded brick courses.

**Workload**

The work load is about 120 hours, corresponding to 4 credit points.

**Learning type**

Lectures and practices; self-study

## M

**10.4 Module: Fundamentals and Methods of Automotive Engineering (MSc-WPfM-GuM-FzgT) [M-MACH-102739]****Responsible:** Prof. Dr.-Ing. Marcus Geimer**Organisation:** KIT Department of Mechanical Engineering**Part of:** [Specialization / Specialization: Vehicle Technology \(mandatory\)](#)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
8	Grade to a tenth	Each term	2 terms	German/English	4	4

**Competence Certificate**

2 exams:

Oral exams: duration approx. 5 min per credit point

Written exams: duration approx. 20 - 25 min per credit point

Amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

none

**Competence Goal**

"Fundamentals and Methods of Production Technology" serves as a comprehensive, in-depth analysis of fundamentals in selected areas of mechanical engineering

**Content**

Fundamentals and Methods of Production Technology

**Workload**

The work load is about 240 hours, corresponding to 8 credit points.

**Learning type**

Lectures, seminars, workshops, excursions

## M

**Competence Certificate**

2 individual exams: written or oral, graded

**Prerequisites**

None

**Competence Goal**

"Fundamentals and Methods of Theoretical Foundations of Mechanical Engineering" serves as a comprehensive, in-depth analysis of fundamentals in selected areas of mechanical engineering.

**Content**

see chosen course

**Workload**

The work load is about 240 hours, corresponding to 8 credit points.

**Learning type**

Lecture, tutorial

## M

## 10.12 Module: Key Competencies [M-MACH-102824]

**Responsible:** Prof. Dr.-Ing. Bettina Frohnäpfel  
**Organisation:** KIT Department of Mechanical Engineering

**Part of:** [Advanced Engineering Fundamentals](#)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
2	pass/fail	Each term	1 term	German/English	4	5

### Election notes

Interdisciplinary qualifications (IQ) completed at the House of Competence (HoC), at the Zentrum für Angewandte Kulturwissenschaft und Studium Generale at the Forum for Science and Society (FORUM, formerly ZAK), or at the Sprachenzentrum (SpZ), can be assigned in self-service.

First, select a partial accomplishment named "self-assignment" in your study schedule, and second, assign an IQ-achievement via the tab "IQ achievements".

Key Competencies (Election: 1 item)			
T-MACH-105721	<a href="#">Engineer's Field of Work</a>	2 CR	Doppelbauer, Geimer
T-MACH-110961	<a href="#">Steering of a Global Operating Company - The Robert BOSCH GmbH as an Example</a>	2 CR	Grube
T-MACH-111686	<a href="#">Self-Booking-MSc-HOC-SPZ-FORUM-Non-Graded</a>	2 CR	Frohnäpfel
T-MACH-111687	<a href="#">Self-Booking-MSc-HOC-SPZ-FORUM-Graded</a>	2 CR	Frohnäpfel

### Competence Certificate

Success is monitored within the framework of academic achievements.

Amount, type and scope of the success control can vary according to the individually choice.

### Prerequisites

none

### Competence Goal

After completing the module Key Competences students can

- determine and coordinate work steps, projects and goals, proceed systematically and purposefully, set priorities as well as assess the feasibility of a task,
- apply the principles of safeguarding good scientific practice,
- apply methods for the planning of a specific task under given framework conditions in a goal- and resource-oriented way,
- describe methods for scientific research and selection of technical information according to pre-established quality criteria and apply them to given problems,
- discuss empirical methods and apply them to selected examples,
- present technical information in a clear, readable, and convincingly argued manner in various forms of presentation (e.g. poster, exposé, abstract) in writing and appropriately visualize it graphically (e.g. engineering drawings, flowcharts),
- present and stand up for technical content in a convincing and appealing way,
- work as a team in a task-oriented manner, handle any conflicts on their own and take responsibility for themselves and others,
- communicate as a team in an objective, goal-oriented and interpersonal manner, represent their own interests, reflect and take into account the interests of others in their own words, and successfully organize the course of the conversation.

### Content

The module Key Competences consists of freely selectable courses offered by the KIT-House of Competence (HoC), the Sprachenzentrums (SpZ), the Studium Generale at the Forum for Science and Society (FORUM, formerly ZAK), and the brick courses contained in the elective block of key qualifications with a work load corresponding to a total of at least 2 ECTS. Upon request, the examination board may approve further courses as freely selectable subjects in the module "Key Competences".

### Module grade calculation

Certification without grade

### Annotation

Only HoC/SPZ/FORUM courses and courses from the "Compulsory-elective block Key Competences" can be chosen.

**Workload**

The work load is about 60 hours (thereof an attendance time of about 28 hours), corresponding to 2 credit points in the Master of Science program.

**Learning type**

lectures, seminars, tutorials, lab courses.

## M

## 10.13 Module: Laboratory Course (MSc-Modul 07, FP) [M-MACH-102591]

**Responsible:** Prof. Dr.-Ing. Kai Furmans  
Prof. Dr.-Ing. Christoph Stiller

**Organisation:** KIT Department of Mechanical Engineering

**Part of:** Advanced Engineering Fundamentals

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
4	pass/fail	Each term	1 term	German/English	4	5

T-MACH-108796	<a href="#">Flow Measurement Techniques</a> <i>This item will not influence the grade calculation of this parent.</i>	4 CR	Kriegseis

### Competence Certificate

The success is monitored within the framework of academic achievements, it can vary according to the individually choice. The module is not graded, and remains not graded even after the choice of one or several graded brick courses.

### Prerequisites

none

### Competence Goal

Students are able to:

- Model typical problems in the laboratory and use typical methods of mechanical science to inquire,
- Built experiment designs, while choosing appropriate system components and models,
- Accomplish experiments goal-oriented,
- Analyse and evaluate results of experiments.

**Content**

see chosen practical training

**Workload**

The work load is about 120 hours, corresponding to 4 credit points.

**Learning type**

practical training, self-study

## M

**10.14 Module: Major Field: Advanced Materials Modelling and Data Management (SP 56) [M-MACH-105904]****Responsible:** Prof. Dr.-Ing. Thomas Böhlke**Organisation:** KIT Department of Mechanical Engineering

**Part of:** Specialization / Specialization: General Mechanical Engineering (Major Fields) (Usage from 4/1/2022)  
 Specialization / Specialization: Theoretical Mechanical Engineering (Major Field) (Usage from 4/1/2022)  
 Specialization / Specialization: Materials and Structures for High Performance Systems (Major Field) (Usage from 4/1/2022)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
16	Grade to a tenth	Each term	2 terms	German	4	2

Mandatory			
T-MACH-111537	Mathematical Methods in Micro Mechanics	4 CR	Böhlke
T-MACH-111588	Data Science and Scientific Workflows	3 CR	Gumbsch, Weygand
T-MACH-111603	Data Science and Scientific Workflows (Project)	1 CR	Gumbsch, Weygand
Advanced Materials Modelling and Data Management (E) (Election: )

T-MACH-105554	Thin Film and Small-scale Mechanical Behavior	4 CR	Gruber, Kirchlechner, Weygand
T-MACH-110957	Hydrogen in Materials: from Energy Storage to Hydrogen Embrittlement	4 CR	Pundt
T-MACH-113412	Atomistic Simulations and Particle Dynamics	4 CR	Gumbsch, Schneider, Weygand

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point.

However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

After having finished this major field the students can

- list important concepts and models for describing material behaviour
- map different material models or concepts to different length scales
- understand concepts of data management, digital workflows and digital infrastructure

**Content**

The comprehensive topic of the major field is the knowledge of basic scientific methods and concepts for describing the material behaviour of applied materials considering their microstructure. Hereby, methods of data management and digital workflows are combined with concepts of material modelling and microstructure description within a unified approach. Together with standardization processes synergies and increase of efficiency for cooperation of scientists can be realized.

The precise topics refer to the fields of mechanics, computational material science and material science.

**Annotation**

none

**Workload**

The work load is about 480 hours in the Master of Science program, whereof the presence time is 100 h

**Learning type**

Lectures, Tutorials, consultation hours

## M

**10.15 Module: Major Field: Advanced Mechatronics (SP 01) [M-MACH-102598]**

**Responsible:** apl. Prof. Dr. Markus Reischl

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point. However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

Students of the major Advanced Mechatronics know the future-oriented procedures. They are able to creatively solve complex interdisciplinary questions, in particular by applying the latest computer-assisted mathematical methods.

**Content**

The Advanced Mechatronics offers a broad, multidisciplinary body of knowledge. It qualifies graduates to solve essential mechatronic questions. In particular the following disciplines are covered by the major Advanced Mechatronics:

- Control theory
- measurement technology and signal processing,
- modelling and
- mathematical methods.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

The contents of this major field are taught in form of lectures, exercises and practical experiences.

## M

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point. However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

The Automation Engineering offers both theoretical foundations and practical knowledge in the field of automation. Students can select, apply and enhance existing methods. The main focus of the major is on

- Applied control engineering
- Automation
- Examples of field applications

Students of Automation Engineering are qualified to master complex challenges of the future. They are able to apply their profound knowledge and the future-oriented methods independent of a particular application field.

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point. However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

After completion of SP 58 students are able to:

- transfer fundamentals of thermodynamics and technical combustion to applications of combustion engines
- name and describe applications
- describe and explain the working principle of combustion engine and its application in vehicles
- analyze and evaluate propulsion systems

**Content**

Energy converting machines are a key issue of technical engineering. Design and working principle are subject of the core area of SP 58. Fundamentals of thermodynamics are transferred to the application of internal combustion engines. In the supplementary area Measurement techniques to analyze and develop combustion engines as well as Fuels, Lubes and special engine concepts are addressed. The application of engines in drivetrains and production processes are continuative topics.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

Lecture, tutorial.

## M

## 10.20 Module: Major Field: Computational Mechanics (SP 06) [M-MACH-102604]

**Responsible:** Prof. Dr.-Ing. Carsten Proppe  
**Organisation:** KIT Department of Mechanical Engineering

**Part of:** Specialization / Specialization: General Mechanical Engineering (Major Fields)  
 Specialization / Specialization: Vehicle Technology (Major Field)  
 Specialization / Specialization: Mechatronics and Microsystems Technology (Major Field)  
 Specialization / Specialization: Product Development and Engineering Design (Major Field)  
 Specialization / Specialization: Theoretical Mechanical Engineering (Major Field (p))

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
16	Grade to a tenth	Each term	2 terms	German/English	4	2

**Election notes**

In the core area of Major Field at least 8 ECTS have to be chosen.

Computational Mechanics (K) (Election: at least 8 credits)			
T-MACH-105338	Numerical Fluid Mechanics	4 CR	Frohnapfel, Gatti
T-MACH-105349	Computational Dynamics	4 CR	Proppe
T-MACH-105351	Computational Mechanics I	6 CR	Böhlke, Langhoff
Computational Mechanics (E) (Election: at most 8 credits)			
T-MACH-105390	Application of Advanced Programming Languages in Mechanical Engineering	4 CR	Weygand
T-MACH-105391	Finite Difference Methods for Numerical Solution of Thermal and Fluid Dynamical Problems	4 CR	Günther
T-MACH-105394	Finite Volume Methods for Fluid Flow	4 CR	Günther
T-MACH-105396	Modeling of Thermodynamical Processes	6 CR	Maas, Schießl
T-MACH-105420	Numerical Simulation of Multi-Phase Flows	4 CR	Wörner
T-MACH-105339	Numerical Simulation of Reacting Two Phase Flows	4 CR	Koch
T-MACH-105397	Numerical Simulation of Turbulent Flows	4 CR	Grötzbach
T-MACH-105350	Computational Vehicle Dynamics	4 CR	Proppe
T-MACH-105352	Computational Mechanics II	6 CR	Böhlke, Langhoff
T-MACH-113412	Atomistic Simulations and Particle Dynamics	4 CR	Gumbsch, Schneider, Weygand
Computational Mechanics (P) (Election: at most 4 credits)			
T-MACH-105392	FEM Workshop - Constitutive Laws <i>This item will not influence the grade calculation of this parent.</i>	4 CR	Schulz, Weygand

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point. However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

The module offers a wide interdisciplinary education of the students in the areas which are summarized internationally under the concept 'Computational Mechanics':

- \* Continuum modelling (in structural mechanics, material theory, dynamics, fluid mechanics and thermodynamics)
- \* Numerical mathematics
- \* Informatics

Students know the procedures oriented to the future of modern engineering. They have the ability for individual, creative solutions of complicated problems with numerical means and take into account the interaction with neighboring fields.

**Content**

See brick courses.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

Lectures, Tutorials

T-MACH-105696	Strategic Product Development - Identification of Potentials of Innovative Products	3 CR	Siebe
T-MACH-110396	Strategic Product Development - Identification of Potentials of Innovative Products - Case Study	1 CR	Albers, Matthiesen, Siebe
T-MACH-111382	Technical Acoustics	4 CR	Pantle, Walter
T-MACH-113982	Validation of Technical Systems	4 CR	Düser
T-MACH-111840	Reliability and Test Engineering	5 CR	Gwosch
Development of innovative appliances and power tools (P) (Election: at most 4 credits)			
T-MACH-105370	Laboratory Mechatronics <i>This item will not influence the grade calculation of this parent.</i>	4 CR	Hagenmeyer, Stiller

**Competence Certificate**

Performance review see individual partial performance.

**Prerequisites**

Due to organizational reasons, the number of participants is limited. At the beginning of August, a registration form will be available at the IPEK website. In the case of too many applicants, a selection process will be taking place. An early application is advantageous.

**Competence Goal**

Graduates are able to analyze and to synthesize complex technical products under consideration of customer, business and market demands. Specifically, they can address specific boundary conditions of devices and power tool manufacturers in power-tool development. They are able to take into account the resulting effects of complex product development projects: e.g. the production in large quantities, complexity of mechatronic solutions or workflow management of interdisciplinary and distributed development teams. The graduates are able to assess and optimize their work results in terms of quality, costs and user benefits. They have a holistic insight into the processes that are necessary for creating products in this specific context and thus are prepared for the technical and non-technical requirements of responsible positions in the team-oriented product development of devices and power tools.

**Content**

See brick courses.

**Module grade calculation**

When calculating the module grade, the partial performance T-MACH-105229 is weighted with 8 ECTS. All other partial achievements are weighted with the specified ECTS.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

Lecture, exercise.

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point. However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

Die Studierenden erwerben in den grundlagenorientierten Kernfächern des Schwerpunktes breite und fundierte Kenntnisse der wissenschaftlichen Theorien, Prinzipien und Methoden der Kraft- und Arbeitsmaschinen, um diese entwerfen, einsetzen und bewerten zu können.

Darauf aufbauend vertiefen die Studierenden in den Ergänzungsfächern ausgewählte Anwendungsfelder, sodass sie im Anschluss in der Lage sind, Probleme aus diesem Anwendungsfeld selbstständig zu analysieren, zu bewerten und hierauf aufbauend Lösungsansätze zu entwickeln.

Die Studierenden können nach Abschluss des Schwerpunkts insbesondere

- Funktion und Einsatz von Kraft- und Arbeitsmaschinen benennen,
- den Stand der Technik und daraus resultierende Anwendungsfelder der Kraft- und Arbeitsmaschinen beschreiben und am Beispiel anzuwenden,
- grundlegende Theorien, Methoden und Eigenschaften für die verschiedenen Anwendungsfelder der Kraft- und Arbeitsmaschinen benennen und diese einsetzen und bewerten.

**Content**

See brick courses.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point. However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

After completing the courses in SP 55 „Energy technology for buildings“ the students have achieved a comprehensive overview on the energy demand for air-conditioning of buildings (heating, cooling, humidification, dehumidification, ventilation) and the techniques for energy supply of buildings (heat, cold, locally generated electricity). They know the methods for evaluation of technologies regarding ecologic, criteria, primary energy and economic viability and they have the ability to apply these methods to concrete cases. They also have gained knowledge on all renewable energy technologies that are relevant for application in buildings, in particular solar thermal collectors and systems and photovoltaic systems as well as energy storage technologies that are applied in buildings (heat storage, batteries).

**Content**

See brick courses.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

Lecture, exercise.

## M

**10.25 Module: Major Field: Engineering Thermodynamics (SP 45) [M-MACH-102635]****Responsible:** Prof. Dr. Ulrich Maas**Organisation:** KIT Department of Mechanical Engineering

**Part of:** Specialization / Specialization: General Mechanical Engineering (Major Fields)  
 Specialization / Specialization: Energy- and Environment Engineering (Major Field)  
 Specialization / Specialization: Vehicle Technology (Major Field)  
 Specialization / Specialization: Mechatronics and Microsystems Technology (Major Field)  
 Specialization / Specialization: Product Development and Engineering Design (Major Field)  
 Specialization / Specialization: Theoretical Mechanical Engineering (Major Field)  
 Specialization / Specialization: Materials and Structures for High Performance Systems (Major Field)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
16	Grade to a tenth	Each term	2 terms	German/English	4	8

**Election notes**

In the core area of the Major Field at least 8 ECTS have to be chosen.

<b>Engineering Thermodynamics (K) (Election: at least 8 credits)</b>			
T-MACH-105213	Fundamentals of Combustion I	4 CR	Maas
T-MACH-105325	Fundamentals of Combustion II	4 CR	Bykov, Maas
T-MACH-105396	Modeling of Thermodynamical Processes	6 CR	Maas, Schießl
T-MACH-105403	Flows and Heat Transfer in Energy Technology	4 CR	Cheng
<b>Engineering Thermodynamics (E) (Election: at most 9 credits)</b>			
T-MACH-105167	Analysis Tools for Combustion Diagnostics	4 CR	Pfeil
T-MACH-105363	Thermal Turbomachines I	6 CR	Bauer
T-MACH-105364	Thermal Turbomachines II	6 CR	Bauer
T-MACH-105422	Flows with Chemical Reactions	4 CR	Class
T-MACH-105428	Selected Chapters of the Combustion Fundamentals	4 CR	Maas
T-MACH-105429	Combustion Diagnostics	4 CR	Maas
T-MACH-105430	Heatpumps	4 CR	Maas, Wirbser
T-MACH-106373	Experimental Techniques in Thermo- and Fluid-dynamics	4 CR	Cheng
T-MACH-111550	CO <sub>2</sub> -Neutral Combustion Engines and their Fuels I	4 CR	Koch
T-MACH-111560	CO <sub>2</sub> -Neutral Combustion Engines and their Fuels II	5 CR	Koch
T-MACH-111585	Hydrogen and reFuels - Energy Conversion in Combustion Engines	4 CR	Kubach
T-MACH-113942	Mathematical Models and Methods of the Theory of Thermochemical Processes	4 CR	Bykov
T-MACH-114060	Model Reduction Methods for Modeling and Simulation of Reacting Flows	4 CR	Bykov
T-MACH-114061	Model Reduction Methods for Modeling and Simulation of Reacting Flows	4 CR	Bykov
T-MACH-114062	Mathematical Models and Methods of the Theory of Thermochemical Processes	4 CR	Bykov

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point.

However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

After completion of SP 45 students are able to:

- apply the thermodynamic fundamentals of reversible and irreversible processes.
- outline the fundamentals of experimental investigations, modeling and simulation of reacting flows.
- understand the working principle of technical systems applying thermodynamic processes and combustion.

**Content**

Thermodynamics is considered to be the basis of all processes in nature and engineering. The major subject in this SP extends the thermodynamic knowledge of the attendees in irreversible thermodynamic processes and provides insight into the fundamentals of reactive flows.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

Lectures, Tutorials

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point. However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

After completion of SP 15 students are able:

- to describe the elements of an energy system and their complex interactions,
- to list different conventional energy sources and assess their static range,
- to name the fluctuating supply of renewable energies such as wind, solar radiation, ocean currents and tides etc. and describe its effects on the energy system,
- to assess the effects of external and internal economic, ecological and technical boundary conditions of energy systems and to derive approaches for an optimal mix of different energy technologies,
- to explain the operational principle of well-established power plants as well as of power plants based on renewable energies.

**Content**

See brick courses.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

Lectures, tutorials.

T-MACH-105406	<a href="#">Two-Phase Flow and Heat Transfer</a>	4 CR	Schulenberg, Wörner

**Competence Certificate**

see individual courses ("Teilleistungen")

**Prerequisites**

None

**Competence Goal**

Graduate in fusion technology acquire a fundamental knowledge of the fusion process and are enabled to deduce based on the physical boundary conditions technological and scientific engineering solutions to individual problems. Since fusion technology is intrinsically of interdisciplinary nature consisting of physics, mechanics, thermal-hydraulics, material sciences and electrical engineering incorporates, the focus of this topic is mainly devoted to allow for the understanding of the underlying physics and moreover to enable the students of couple the different disciplines. Here, mainly methodologies and solution approaches are communicated to the graduates with the goal to capture critical issues within multi-physics problems, to identify central challenges within the given problem and to enable them to elaborate engineering solution concepts. Aside from the analysis of the relevance/importance of aspects within a complex multi-physics problem graduates are prepared to take decisions based on a solid physics basis and to formulate solution approaches.

The reliable handling of different physical phenomena from different disciplines and the methodological capability to tackle multi-physics questions and to extract from them central core issues qualifies the graduates for a competent and successful career not only in fusion technology but also in neighboring fields such energy engineering as well as process, chemical and environmental engineering both in the research and development context but also in the project management.

**Content**

Actual energy situation and perspectives. Elementary particle physics, principles of nuclear fusion and nuclear fission. What is a plasma and how it can be confined? How stable is a plasma and conditions for an ignition, control of a plasma and transport in plasmas. Plasmas are confined contactless by means of magnetic fields. Hence fundamentals of the magnet technology, superconductivity, materials in super-conductivity, fabrication and design of magnets are elaborated. A fusion reactor breeds its own fuel Tritium, which is radioactive. Tritium poses specific requirements regarding separation, conditioning and the fuel cycle, for which the physical and technological basis are outlined. Fusion plasmas are characterized by a small particle density and hence a vacuum is required. Simultaneously plasmas generate high temperatures and heat loads necessitating dedicated designs of plasma facing components at a considerable neutron irradiation. In both technology fields the tasks, requirements and challenges are formulated and how they translate to the current "state of the art" are illustrated. Moreover, an introduction into design criteria and calculation methods to select adequate vacuum pumps and to design plasma facing components is provided.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Recommendation**

appreciated is knowledge in heat and mass transfer as well as in electrical engineering

Basic knowledge in fluid mechanics, material sciences and physics

**Learning type**

Lecture, presentation (transparencies nearly exclusively in english) complemented by print-outs and exercises

<b>Information Technology (Ü) (Election: )</b>			
T-MACH-108889	BUS-Controls - Advance <i>This item will not influence the grade calculation of this parent.</i>	0 CR	Geimer

**Competence Certificate**

Oral exams: duration approx 5 min. per credit point.

However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

none

**Competence Goal**

Students are able to

- explain fundamentals of information technology for given problems in mechanical engineering an mechatronics.
- explain major methods for acquisition, processing and exploitation of information in technical systems.
- outline and to explain alternative methods to determine and to represent measurement uncertainties and their propagation in technical systems.
- explain information filters and fusion methods and understand their application to given problems.

**Content**

- Techniques of information and data processing in mechanical engineering
- Techniques of sensor data processing
- Concepts of control theory
- Electronic devices for data processing

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

Lectures, tutorials.

**M****10.30 Module: Major Field: Information Technology of Logistic Systems (SP 19) [M-MACH-102625]****Responsible:** Prof. Dr.-Ing. Kai Furmans**Organisation:** KIT Department of Mechanical Engineering

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point. However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

Students are able to:

- Describe and explain soft- and hardware for logistical systems including Supply-Chains,
- Choose control mechanisms and communication systems and describe their basic functions,
- Compare strength and weaknesses of different approaches and evaluate the fundamental suitability.

**Content**

This emphasis module focuses on automation technology in material flow as well as the information technology that has a direct relationship with it. Information systems to support logistic processes are presented. It is shown how requirements of a supply chain can be identified and an appropriate information system can be chosen. Furthermore basic for the main topics of logistics are provided. To gain a deeper understanding, the courses are accompanied by exercises and partly by case studies.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

Lectures and practices; self-study

## M

**10.31 Module: Major Field: Integrated Product Development [M-MACH-102626]**

**Responsible:** Prof. Dr.-Ing. Albert Albers  
**Organisation:** KIT Department of Mechanical Engineering

**Part of:** Specialization / Specialization: General Mechanical Engineering (Major Fields)  
 Specialization / Specialization: Energy- and Environment Engineering (Major Field)  
 Specialization / Specialization: Vehicle Technology (Major Field)  
 Specialization / Specialization: Product Development and Engineering Design (Major Field (p))  
 Specialization / Specialization: Production Technology (Major Field)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
16	Grade to a tenth	Each winter term	1 term	German	4	4

Mandatory			
T-MACH-105401	Integrated Product Development	16 CR	Albers, Düser

**Competence Certificate**  
 See course ("Teilleistung")

**Prerequisites**  
 None

**Competence Goal**

By working practically in experience-based learning arrangements with industrial development tasks, graduates are able to succeed in new and unknown situations when developing innovative products by using methodological and systematic approaches. They can apply and adapt strategies of development and innovation management, technical system analysis and team leadership to the situation. As a result, they are able to foster the development of innovative products in industrial development teams in prominent positions, taking into account social, economic and ethical aspects.

**Content**

Organizational integration: integrated product development model, core team management and simultaneous engineering, informational integration: innovation management, cost management, quality management and knowledge management

Personal integration: team development and leadership

Guest lectures from the industry

**Annotation**

The participation in the course "Integrated Product Development" requires the simultaneous participation in the lecture(2145156), the workshop (2145157) and the product development project (2145300).

For organizational reasons, the number of participants for the product development project is limited. Therefore, a selection process will take place. Registration for the selection process is made by means of a registration form, which is available annually from April to July on the homepage of the IPEK. Afterwards the selection itself will be discussed in personal interviews with Professor Albers.

The rule here is:

- Students within the course of studies will be decided on the basis of their progress (not only with semesters), which will be determined in a personal interview. The personal selection interviews take place in addition, in order to make the students aware of the special project-oriented format and the time required in correlation with the ECTS points of the course before the final registration for the course.
- With the same study progress after waiting period
- With same waiting time by lot.
- The same procedure is used for students from other courses.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

lecture  
 tutorial  
 product development project

## M

T-MACH-108717	Mechanics of Laminated Composites	4 CR	Schnack
T-MACH-112763	Laser Material Processing	4 CR	Schneider

Lightweight Construction (P) (Election: at most 4 credits)			
T-MACH-111431	Programming in CAE-Applications	4 CR	Kärger

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point. However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

Lightweight design is the realization of a development strategy, which aims at fulfilling a required function over the product life under specified boundary conditions by a system of minimal weight.

Therefore, lightweight design can always be described as an optimization problem, that must be solved as efficiently as possible by suitable measures. With regard to the automotive industry, this means reducing the total vehicle weight without negatively affecting important properties such as the bodywork stiffness or crash characteristics.

In order to solve the optimization problem of lightweight design technically and economically efficient, an interdisciplinary approach is required. This means that specific know-how is required in many areas of materials science and engineering, as well as interdisciplinary thinking.

Exploiting the full potential of lightweight design therefore requires the systematic development of materials, the development and adaption of suitable manufacturing and finishing processes, as well as the development of simulation tools and design methods for innovative lightweight constructions.

Students acquire the skill to name the basics of lightweight design and to apply them to problems in various areas of mechanical engineering, in particular materials, methods and production.

As an elementary component of the module, the students can explain and apply the materials relevant for lightweight design. The students are able to describe and compare the materials important for lightweight design and to select the corresponding methods for construction, design and dimensioning under consideration of suitable manufacturing technologies.

Based on examples, which are also used in industry, the students learn to select suitable materials, to describe them with suitable methods and to develop products under consideration of the manufacturing process. The students learn to analyze processes and to assess their efficiency.

**Content**

See brick courses.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Recommendation**

The following **courses** are recommended in the election block for:

1. Focus on methods and simulation
  - T-MACH-105970 Structural Analysis of Composite Laminates
  - T-MACH-105971 Simulation of the process chain of continuously fiber reinforced composite structure
  - T-MACH-110954 Lightweight constructions with fiber-reinforced-polymers – theory and practice
  - T-MACH-105221 Lightweight Engineering Design
2. Focus on materials science
  - T-MACH-105211 Materials of Lightweight Construction
  - T-MACH-102137 Polymer Engineering I
  - T-MACH-110954 Lightweight constructions with fiber-reinforced-polymers – theory and practice
  - T-MACH-110937 Materials Recycling and Sustainability (as of WS 20/21)
3. Focus on production science
  - ◦ T-MACH-110954 Lightweight constructions with fiber-reinforced-polymers – theory and practice

---

The following **major fields** are recommended in combination with SP 25 "Lightweight Construction" for:

1. Focus on methods and simulation
  - SP 30 Applied Mechanics (Böhlke)
  - SP 56 Advanced Materials Modelling (Böhlke)
  - SP 41 Fluid Mechanic (Frohnappel)
2. Focus on materials science
  - SP 36 Polymer Engineering (Elsner)
  - SP 26 Materials Science and Engineering (Heilmaier)
3. Focus on production science
  - SP 39 Production Technology (Schulze)

**Learning type**

Lectures, Tutorials

T-MACH-105317	Digital Control	4 CR	Knoop

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point. However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

Students

- acquire comprehensive and well-founded knowledge on the main topics of logistics, an overview of different logistic questions in practice and knows the functionality of material handling systems,
- are able to illustrate logistic systems with adequate accuracy by using simple models,
- are able to realize coherences within logistic systems,
- are able to evaluate logistic systems by using the learnt methods,
- are able to analyze and explain the phenomena of industrial material and value streams
- are able to plan logistic systems and evaluate their performance,
- can use approaches of Supply Chain Management within the operational practice,
- identify, analyse and evaluate risks within logistic systems.

**Content**

The emphasis module *Material Flow and Logistics* provides comprehensive and well-founded basics for the main topics of logistics. Within the lectures, the interaction between several components of logistic systems will be shown. The module focuses on technical characteristics of material handling systems as well as on methods for illustrating and evaluating logistics systems. Furthermore the main topics of logistics and industrial material and value streams can be focused on by queuing methods to model production systems. Another focus can be set on basic methods for planning and running logistic systems or special issues like supply chain management. To gain a deeper understanding, the courses are accompanied by exercises and partly by case studies.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

Lectures and practices; self-study

**Competence Certificate**

See chosen brick course

**Prerequisites**

None

**Competence Goal**

The students acquire a basic knowledge in the field of 1. ergonomics and 2. work organisation:

1. They are able to consider cognitive, physiological, anthropometric, and safety technical aspects in order to design workplaces ergonomically. Just as well they know physical and psycho-physical fundamentals (e. g. noise, lighting, climate) in the field of work-environmental design. Furthermore the students are able to evaluate workplaces by knowing and being able to apply essential methods of time studies and payment systems. Finally, they get a first, overall insight into the German labour law as well as into the organisation of advocacy groups beyond companies.
2. Within this module the students gain also a fundamental knowledge in the field of structural, process, and production organization. Besides, they get to know basic aspects of industrial teamwork and they know relevant theories in the field of interaction and communication, the management of employees as well as work satisfaction and motivation. Finally, the students get to know also methods in the field of personnel selection, development, and assessment.

Further on they get to know basic methods of behavioral-science data acquisition (e. g. eye-tracking, ECG, dual-task-paradigm) and they gain a first insight into empirical research methods (e. g. experimental design, statistical data evaluation). Selected complementary subjects deepen or extend the above mentioned learning outcomes.

**Content**

### Competence Certificate

Oral exams: duration approx. 5 min. per credit point.

However, amount, type and scope of the success control can vary according to the individually choice.

### Prerequisites

None

### Competence Goal

As part of a major field a specific subdomain of mechanical engineering is made accessible in breadth and depth. Students gain comprehensive knowledge in the core subjects and detailed knowledge in the supplementary subjects of the selected subdomain. They are able to generate new (scientific) solutions within this subdomain.

The specific learning outcomes are defined by the respective coordinator of the major field.

### Content

The comprehensive topic of the major field are the thermodynamical and kinetic basics of materials science that the students acquire within the compulsory parts (8 credit points). Moreover, there is a supplementary area of materials science and engineering which offers different subjects according to the students' interests.

### Annotation

The module Materials Science and Engineering consists of 16 credit points in the master's program. Within the compulsory parts, at least 8 credits are to be chosen. Within the supplementary area, the students can select from a broad variation of courses.

### Workload

The work load is about 480 hours in the Master of Science program, whereof the presence time is 82 h.

**Learning type**

Within the compulsory parts of the major field Materials Science and Engineering the students choose from a small number of lectures and tutorials (obligatory).

Within the supplementary area students can choose not only lectures and tutorials but also lab courses and seminars.

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point. However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

none

**Competence Goal**

The topic mechatronics offers a broad, multidisciplinary body of knowledge. The graduates are qualified to solve essential mechatronic questions. In particular the following disciplines are covered by the major mechatronics:

§ Mechanics and fluidics

§ Electronics

§ Information processing

§ Automation.

Students of the topic mechatronics know the future-oriented procedures. They are able to individually and creatively solve interdisciplinary questions and learn to effectively combine tools from the individual disciplines.

**Content**

See brick courses.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

Lecture, tutorial.

**Competence Certificate**

In the core area of Major Field at least 8 ECTS have to be chosen.

**Prerequisites**

None

**Competence Goal**

The Medical Engineering qualifies students to solve challenges in the field of complex medical and biomedical systems supporting human-centred diagnostics and therapy. Based on the specific requirements for medical products the following topics are taught within the major Medical Engineering:

- Broad basis of relevant medical and biological knowledge
- Measuring technology and signal processing
- Development and Manufacturing of medical products

Graduates of this major know all relevant methods to design modern medical devices and have the ability to efficiently and creatively develop solutions for leading edge medical applications.

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point. However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

none

**Competence Goal**

The Students achieved the following competence goals:

- Knowledge of the principles of actuation and sensing including pros and cons
- Knowledge of the underlying concepts of materials science and technology
- on different lengths scales
- Explanation of layout and function of important actuators and sensors
- Calculation of important properties (time constants, forces, displacements, sensitivity, etc.)
- Development of a layout based on specifications

**Content**

See brick courses.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

Lecture, exercise.

## M

**10.39 Module: Major Field: Microsystem Technology (SP 33) [M-MACH-102616]****Responsible:** Prof. Dr. Jan Gerrit Korvink**Organisation:** KIT Department of Mechanical Engineering

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point. However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

none

**Competence Goal**

In this key area, attendees gain competence in the design, construction, production, and application of **micro and nano systems**. Microsystems comprise the **smallest human-made** components. These include sensors, actuators, and system components working together for form a more powerful whole. Micro and nano systems are the basis for numerous smart products, such as **smart dust**, smart buildings, the **internet of things**, smart consumer-ware, smart mobility, and smart production via **industry 4.0** concepts.

The **increasing control** over morphology at the nano and microscale is enabling the bottom up construction of **passive and active materials** with ideal and unheard-of properties, embedded in the devices that can make use of these, and are therefore **revolutionising** the world of products and scientific instrumentation.

T-MACH-111820	Control of Mobile Machines – Prerequisites	0 CR	Becker, Geimer

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point. However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

The student

- knows and understands the basic structure of the machines,
- masters the basic skills to develop the selected machines

**Content**

- Introduction of the required components and machines
- Basics of the structure of the whole system
- Practical insight in the development techniques

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

- Research-oriented teaching
- lectures
- exercises

## M

**10.41 Module: Major Field: Modeling and Simulation in Dynamics (SP 61) [M-MACH-104434]****Responsible:** Prof. Dr.-Ing. Alexander Fidlin**Organisation:** KIT Department of Mechanical Engineering

**Part of:** Specialization / Specialization: General Mechanical Engineering (Major Fields)  
 Specialization / Specialization: Energy- and Environment Engineering (Major Field)  
 Specialization / Specialization: Vehicle Technology (Major Field)  
 Specialization / Specialization: Mechatronics and Microsystems Technology (Major Field)  
 Specialization / Specialization: Product Development and Engineering Design (Major Field)

<b>Modeling and Simulation in Dynamics (E) (Election: )</b>			
T-MACH-108888	Simulation of Coupled Systems - Advance <i>This item will not influence the grade calculation of this parent.</i>	0 CR	Geimer

**Competence Certificate**

Oral exams: duration approx. 5 minutes per credit point.

Amount, type and scope of the success control can vary according to individual choice.

**Prerequisites**

none

**Competence Goal**

The module provides modeling competences and continues thus the compulsory courses in dynamics. To this end analytical methods for the modeling and examination of dynamical systems are presented. The simulation of the systems enables the students to do simulation studies in typical applications in dynamical systems of mechanical engineering to be able to evaluate and interpret the results.

**Content**

This module deals with procedure, methods and applications for mechanical dynamical systems. Subjects are different methods to describe kinematics of multibody systems and to derive the equations of motion for such systems. Solutions of the equations of motion are obtained analytically by mathematical methods or approximately by numerical integration. Applications range from industrial systems like machines and cars down to atomistic simulation.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points. 1 LP = 30 working hours.

**Learning type**

Lectures, Tutorials

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point. However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

After completing the students can:

- formulate the governing equations for specific systems in energy and fluid mechanics.
- explain the different numerical schemes applied to solve the system of equations.
- use frequently applied simulation tools in a more efficient and successful way.

**Content**

See brick courses.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

Lectures, Tutorials

## M

**10.43 Module: Major Field: Polymer Engineering (SP 36) [M-MACH-102632]****Responsible:** Dr.-Ing. Wilfried Liebig**Organisation:** KIT Department of Mechanical Engineering

T-MACH-110937	Materials Recycling and Sustainability	4 CR	Liebig
<b>Polymer Engineering (P) (Election: at most 1 item)</b>			
T-MACH-111431	Programming in CAE-Applications	4 CR	Kärger

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point.

However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

The students...

- are able to choose polymers for applications in mechanical engineering in target-oriented way and are able to justify their selection.
- are able to describe and compare production processes for polymers and PMCs exemplarily.
- are able to describe the mechanical behaviour of polymers and PMC based on scientific theories, principles and methods.
- are able to solve tasks in the field of polymer engineering and proceed adequate to the situation.
- are able to integrate intra-modular knowledge at the solution of given problems.
- have the ability to develop polymer parts in a constructive way under consideration of technical and economic conditions.

**Content**

The field of Polymer Engineering includes synthesis, material science, processing, construction, design, tool engineering, production technology, surface engineering and recycling. The aim is, that the students gather knowledge and technical skills to use the material "polymer" meeting its requirements in an economical and ecological way.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

Lectures, Tutorials

## M

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point. However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

After completion of SP 23 students are able:

- to name the different types of centralized and distributed power plants,
- to explain the operational principle of well-established power plants as well as of power plants based on renewable energies.
- to predict the electric, respectively thermal efficiency of power plants,
- to assess the economics of power plants,
- to highlight the environmental impact of conventional power plants and of renewable energies,
- to assess the availability, operational safety and flexibility of different types of power plants,
- to develop advanced power plants based on thermodynamic, fluid mechanical and other basics.

**Content**

See brick courses.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

Lectures, tutorials.

 Specialization / Specialization: Product Development and Engineering Design (Major Field)  
 Specialization / Specialization: Production Technology (Major Field (p))

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
16	Grade to a tenth	Each term	2 terms	German/English	4	11

**Election notes**

In the core area of Major Field at least 8 ECTS have to be chosen.

<b>Production Technology (K) (Election: at least 8 credits)</b>			
T-MACH-102105	Manufacturing Technology	8 CR	Schulze
T-MACH-110337	Global Production and Logistics	8 CR	Furmans, Lanza
T-MACH-108849	Integrated Production Planning in the Age of Industry 4.0	8 CR	Lanza
T-MACH-110962	Machine Tools and High-Precision Manufacturing Systems	8 CR	Fleischer
T-MACH-113983	The Circular Factory	8 CR	Lanza
<b>Production Technology (E) (Election: )</b>			
T-MACH-113570	Additive Manufacturing Processes	4 CR	Zanger
T-MACH-113647	Digitalization from Product Concept to Production	4 CR	Wawerla
T-MACH-105151	Energy Efficient Intralogistic Systems	4 CR	Kramer, Schönung
T-MACH-105157	Foundry Technology	4 CR	Günther, Klan
T-MACH-111003	Global Logistics	4 CR	Furmans
T-MACH-110991	Global Production	4 CR	Lanza
T-MACH-106374	Human-oriented Productivity Management: Personnel Management	4 CR	Stock
T-MACH-105188	Integrative Strategies in Production and Development of High Performance Cars	4 CR	Schlichtenmayer
T-MACH-110334	International Production Engineering A	4 CR	Fleischer
T-MACH-110335	International Production Engineering B	4 CR	Fleischer
T-MACH-112115	Artificial Intelligence in Production	4 CR	Fleischer
T-MACH-105174	Warehousing and Distribution Systems	4 CR	Furmans
T-MACH-105231	Leadership and Management Development	4 CR	Ploch
T-MACH-110954	Lightweight Constructions with Fiber-Reinforced-Polymers – Theory and Practice	4 CR	Kärger, Liebig
T-MACH-105783	Learning Factory “Global Production“	6 CR	Lanza
T-MACH-105189	Mathematical Models and Methods for Production Systems	6 CR	Baumann, Furmans
T-MACH-105442	Intellectual Property Rights and Strategies in Industrial Companies	4 CR	Zacharias
T-MACH-110318	Product- and Production-Concepts for Modern Automobiles	4 CR	Kienzle, Steegmüller
T-MACH-110984	Production Technology for E-Mobility	4 CR	Fleischer
T-MACH-105523	Productivity Management in Production Systems	4 CR	Stowasser
T-MACH-105441	Development of Oil-Hydraulic Powertrain Systems	4 CR	Geerling, Geimer
T-MACH-102107	Quality Management	4 CR	Lanza
T-MACH-113031	Rapid Industrialization of Immature Products using the Example of Electric Mobility	4 CR	Bauer
T-MACH-105170	Welding Technology	4 CR	Farajian
T-MACH-112121	Seminar Application of Artificial Intelligence in Production	4 CR	Fleischer
T-MACH-108737	Seminar Data-Mining in Production	3 CR	Lanza
T-MACH-105185	Control Technology	4 CR	Gönnheimer

T-MACH-113372	Strategic Decision-Making in Global Production Network Design: A Seminar on Optimization and Simulation	4 CR	Benfer, Lanza
T-MACH-105362	Technology of Steel Components	4 CR	Schulze
T-MACH-105177	Metal Forming	4 CR	Herlan
T-MACH-102148	Gear Cutting Technology	4 CR	Klaiber
T-MACH-110937	Materials Recycling and Sustainability	4 CR	Liebig
<b>Production Technology (P) (Election: at most 4 credits)</b>			
T-MACH-102099	Experimental Lab Class in Welding Technology, in Groups <i>This item will not influence the grade calculation of this parent.</i>	4 CR	Dietrich
T-MACH-102154	Laboratory Laser Materials Processing <i>This item will not influence the grade calculation of this parent.</i>	4 CR	Schneider
T-MACH-108878	Laboratory Production Metrology	4 CR	Lanza, Stamer
T-MACH-105346	Production Techniques Laboratory <i>This item will not influence the grade calculation of this parent.</i>	4 CR	Deml, Fleischer, Furmans, Ovtcharova
T-MACH-110960	Project Internship Additive Manufacturing: Development and Production of an Additive Component	4 CR	Zanger

**Competence Certificate**

Oral exams: duration approx. 5 min per credit point

Written exams: duration approx. 20 - 25 min per credit point

Amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

The students ...

- are able to analyze new situations and choose methods of production science target-oriented based on the analyses, as well as justifying their selection.
- are able to describe and compare complex production processes exemplarily.
- are able to generate new solutions in the field of production science under consideration of scientific theories, principles and methods.
- are able to solve tasks in the field of production science team oriented and proceed responsible and adequate to the situation.
- are able to integrate the results of others at the solution of given problems.
- have the ability to state results in written form developed in a team, and are able to interpret and present them with self-chosen methods.
- are able to identify, dissect and develop further systems and processes and apply given sets of criteria under consideration of technical, economic and social conditions.

**Content**

Within this module the students will get to know and learn about production science. Manifold lectures and excursions as part of several lectures provide specific insights into the field of production science.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

Lectures, seminars, workshops, excursions

## M

**10.47 Module: Major Field: Rail System Technology (SP 50) [M-MACH-102641]**

**Responsible:** Prof. Dr.-Ing. Martin Cichon  
**Organisation:** KIT Department of Mechanical Engineering

**Part of:** Specialization / Specialization: General Mechanical Engineering (Major Fields)  
 Specialization / Specialization: Vehicle Technology (Major Field (p))  
 Specialization / Specialization: Mechatronics and Microsystems Technology (Major Field)  
 Specialization / Specialization: Product Development and Engineering Design (Major Field)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
16	Grade to a tenth	Each term	2 terms	German/English	4	6

**Election notes**

In the core area of Major Field at least 8 ECTS have to be chosen.

<b>Mandatory</b>			
T-MACH-106424	Rail System Technology	4 CR	Cichon
T-MACH-105353	Rail Vehicle Technology	4 CR	Cichon
<b>Rail System Technology (E) (Election: at most 10 credits)</b>			
T-MACH-105540	Railways in the Transportation Market	4 CR	Cichon
T-MACH-113016	Digitization in the Railway System	4 CR	Cichon
T-MACH-105237	Vehicle Lightweight Design - Strategies, Concepts, Materials	4 CR	Henning
T-MACH-105218	Automotive Vision	6 CR	Lauer, Stiller
T-MACH-113069	Vehicle Systems for Urban Mobility	4 CR	Cichon
T-MACH-105535	Composite Manufacturing - Polymers, Fibers, Semi-Finished Products, Manufacturing Technologies	4 CR	Henning
T-MACH-113068	Innovation and Project Management in Rail Vehicle Engineering	4 CR	Cichon
T-MACH-105350	Computational Vehicle Dynamics	4 CR	Proppe
T-MACH-108692	Seminar for Rail System Technology	3 CR	Cichon

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point.

However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

### Competence Goal

- The students understand relations and interdependencies between rail vehicles, infrastructure and operation in a rail system.
- Based on operating requirements and legal framework they derive the requirements concerning a capable infrastructure and suitable concepts of rail vehicles.
- They recognize the impact of alignment, understand the important function of the wheel-rail-contact and estimate the impact of driving dynamics on the operating program.
- They evaluate the impact of operating concepts on safety and capacity of a rail system.
- They know the infrastructure to provide power supply to rail vehicles with different drive systems.
- The students learn the role of rail vehicles and understand their classification. They understand the basic structure and know the functions of the main systems. They understand the overall tasks of vehicle system technology.
- They learn functions and requirements of car bodies and judge advantages and disadvantages of design principles. They know the functions of the car body's interfaces.
- They know about the basics of running dynamics and bogies.
- The students learn about advantages and disadvantages of different types of traction drives and judge, which one fits best for each application.
- They understand brakes from a vehicular and an operational point of view. They assess the fitness of different brake systems.
- They know the basic setup of train control management system and understand the most important functions.
- They specify and define suitable vehicle concepts based on requirements for modern rail vehicles.
- Supplementary lectures present further major aspects of a rail system.

### Content

1. Railway System: railway as system, subsystems and interdependencies, definitions, laws, rules, railway and environment, economic impact
2. Operation: Transportation, public transport, regional transport, long-distance transport, freight service, scheduling
3. Infrastructure: rail facilities, track alignment, railway stations, clearance diagram
4. Wheel-rail-contact: carrying of vehicle mass, adhesion, wheel guidance, current return
5. Vehicle dynamics: tractive and brake effort, driving resistance, inertial force, load cycles
6. Signaling and Control: operating procedure, succession of trains, European Train Control System, blocking period, automatic train control
7. Traction power supply: power supply of rail vehicles, comparison electric traction and diesel traction, dc and ac networks, system pantograph and contact wire, filling stations
8. Vehicle system technology: structure and main systems of rail vehicles
9. Car body: functions, requirements, design principles, crash elements, coupling, doors and windows
10. Bogies: forces, running gears, bogies, Jakobs-bogies, active components, connection to car body, wheel arrangement
11. Drives: principles, electric drives (main components, asynchronous traction motor, inverter, with DC supply, with AC supply, without line supply, multisystem vehicles, dual mode vehicles, hybrid vehicles), non-electric drives
12. Brakes: basics, principles (wheel brakes, rail brakes, blending), brake control (requirements and operation modes, pneumatic brake, electropneumatic brake, emergency brake, parking brake)
13. Train control management system: definition of TCMS, bus systems, components, network architectures, examples, future trends
14. Vehicle concepts: trams, metros, regional trains, intercity trains, high speed trains, double deck vehicles, locomotives, freight wagons
15. Further contents in supplementary lectures

### Annotation

A bibliography is available for download (Ilias-platform).

### Workload

- Total effort at 16 ECTS (M.Sc.): about 480 hours
- Regular attendance: 84 hours
- Self-study: 84 hours
- Exam and preparation: 312 hours

### Learning type

Lectures in the core part.

Lectures and seminars are offered in the supplementary part.

## M

**10.48 Module: Major Field: Robotics (SP 40) [M-MACH-102633]****Responsible:** apl. Prof. Dr. Ralf Mikut**Organisation:** KIT Department of Mechanical Engineering

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point. However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

The Robotics offers extensive knowledge to develop, design and manufacture future intelligent robots. The following scientific disciplines are covered during the major Robotics:

- Control systems and control theory
- Actuators and sensors
- Mathematical and descriptive methods

The students of the major Robotics have the essential skills necessary to develop future robotic systems for modern applications.

**Content**

See brick courses.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

Lecture, tutorial.

## M

**10.49 Module: Major Field: Technical Ceramics and Powder Materials (SP 43) [M-MACH-102619]****Responsible:** Prof. Dr. Michael Hoffmann**Organisation:** KIT Department of Mechanical Engineering

**Part of:** [Specialization / Specialization: General Mechanical Engineering \(Major Fields\)](#)  
[Specialization / Specialization: Energy- and Environment Engineering \(Major Field\)](#)  
[Specialization / Specialization: Vehicle Technology \(Major Field\)](#)  
[Specialization / Specialization: Product Development and Engineering Design \(Major Field\)](#)  
[Specialization / Specialization: Materials and Structures for High Performance Systems \(Major Field\)](#)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
16	Grade to a tenth	Each term	2 terms	German/English	4	1

**Election notes**

In the core area of Major Field at least 8 ECTS have to be chosen.

<b>Technical Ceramics and Powder Materials (K) (Election: at least 8 credits)</b>			
T-MACH-102111	<a href="#">Principles of Ceramic and Powder Metallurgy Processing</a>	4 CR	Schell
T-MACH-100287	<a href="#">Introduction to Ceramics</a>	6 CR	Schell

T-MACH-113031	<a href="#">Rapid Industrialization of Immature Products using the Example of Electric Mobility</a>	4 CR	Bauer

**Competence Certificate**

see brick courses

**Prerequisites**

None

**Competence Goal**

Students are able to:

- Describe main functional elements of of technical logistics,
- Determine the main parameters necessary for functionality,
- Combines those functional elements to solve material handling tasks appropriate, and
- Evaluate resulting material handling installations.

**Content**

The emphasis module *Technical Logistics* provides in-depth basics on the main topics of technical logistics. The module focuses on technical characteristics of material handling technology. To gain a deeper understanding, the course is accompanied by exercises.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

Lectures and practices; self-study

## M

**10.51 Module: Major Field: Thermal Turbomachines (SP 46) [M-MACH-102636]****Responsible:** Prof. Dr.-Ing. Hans-Jörg Bauer**Organisation:** KIT Department of Mechanical Engineering

T-MACH-105445	Simulator Exercises Combined Cycle Power Plants	2 CR	Banuti, Schulenberg

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point. However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

After completion of SP 46 students are able to:

- identify and quantify the specific requirements of different applications in the fields of energy technology, aeronautics, car and motor technology and process technology on thermal turbo machines,
- apply the basics of thermodynamics, fluid mechanics and of other generic disciplines to analyse and design turbo machines and their components,
- explain the governing processes in turbo machines such as compression, combustion and expansion,
- Recognise and exploit the potentials to further improve the economics and environmental friendliness of turbo machines, their components and in their interaction with the overarching systems, like power plant or airplane,
- Explain the operational principle of turbo machines and the related generics.

**Content**

Thermal turbo machines are driving generators of power plants to generate electric energy. In aeronautics turbofan, turboprop and turboshaft engines are the dominating propulsion systems for airplanes and helicopters due to their high specific power-to-weight ratio and efficiency. Turbochargers are providing increased power and efficiency to internal combustion engines. Turbocompressors are used in multiple applications in chemical and process industry. In the major subject "Thermal Turbo Machines" students learn to apply their basic knowledge in thermodynamics, fluid mechanics, technical mechanics and other generic disciplines to analyse and develop challenging applications.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

Lectures, Tutorials

## M

**10.52 Module: Major Field: Tribology (SP 47) [M-MACH-102637]**

**Responsible:** Prof. Dr. Martin Dienwiebel  
**Organisation:** KIT Department of Mechanical Engineering

T-MACH-105724	Failure Analysis	4 CR	Greiner, Schneider
T-MACH-102103	Superhard Thin Film Materials	4 CR	Ulrich
<b>Tribology (P) (Election: at most 4 credits)</b>			
T-MACH-105813	Practical Course "Tribology" <i>This item will not influence the grade calculation of this parent.</i>	4 CR	Dienwiebel, Schneider

**Competence Certificate**

Oral exams: duration approx. 5 min. per credit point.

However, amount, type and scope of the success control can vary according to the individually choice.

**Prerequisites**

None

**Competence Goal**

After attending the core subject "tribology" ( 2181114) the students have the following skills:

- They can describe the fundamental friction and wear mechanisms, which occur in tribologically stressed systems.
- They can evaluate the friction and wear behavior of tribological systems.
- They can explain the effects of lubricants and their most important additives.
- They can identify suitable approaches to optimize tribological systems.
- They explain the most important experimental methods for the measurement of friction and wear, and is able to use them for the characterisation of tribo pairs.
- They can choose suitable methods for the evaluation of roughness and topography from the nm-scale to the mm-scale and is able to interpret the determined values in respect to their effect on the tribological behavior.
- They can describe the most important surface-analytical methods and their physical principles for the characterization of tribologically stressed sliding surfaces.

The additional learning outcomes depend on which further lectures are selected and are explicitly described there.

**Content**

In addition to the core subject "tribology" (bricks T-MACH-105531 and T-MACH-109303), the student has to choose two more lectures, which deal with specific problems of tribology, e.g. in the field of product development, simulation or materials selection.

For detailed information see the description of the different courses of the module.

**Annotation**

The module Tribology consists of 16 credit points in the master's program. Within that module, the students have to pass bricks T-MACH-105531 and T-MACH-109303 from the core area (8 credit points) and can select from a broad variation of courses within the supplementary area.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points.

**Learning type**

In the core area of the major field Materials Science and Engineering the students have to pass bricks T-MACH-105531 and T-MACH-109303 (obligatory).

Within the supplementary area students can choose not only lectures and tutorials but also lab courses and seminars.

### Competence Certificate

Oral exams: duration approx. 5 min. per credit point. However, amount, type and scope of the success control can vary according to the individually choice.

### Prerequisites

None

### Competence Goal

The student

- knows the most important components of a vehicle,
- knows and understands the functioning and the interaction of the individual components,
- knows the basics of dimensioning the components,
- knows and understands the procedures in automobile development,
- knows and understands the technical specifications at the development procedures,
- is aware of notable boundaries like legislation,
- is ready to analyze and judge vehicle concepts and to participate competently in the development of vehicles.

### Content

See brick courses.

### Workload

The work load is about 480 hours, corresponding to 16 credit points.

### Learning type

Lectures, tutorials.

## M

**10.54 Module: Major Field: Vibration Theory (SP 60) [M-MACH-104443]**

**Responsible:** Prof. Dr.-Ing. Alexander Fidlin  
**Organisation:** KIT Department of Mechanical Engineering

**Part of:** Specialization / Specialization: General Mechanical Engineering (Major Fields)  
 Specialization / Specialization: Energy- and Environment Engineering (Major Field)  
 Specialization / Specialization: Vehicle Technology (Major Field)  
 Specialization / Specialization: Mechatronics and Microsystems Technology (Major Field)  
 Specialization / Specialization: Product Development and Engineering Design (Major Field)  
 Specialization / Specialization: Production Technology (Major Field)  
 Specialization / Specialization: Theoretical Mechanical Engineering (Major Field (p))

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
16	Grade to a tenth	Each term	2 terms	German/English	4	5

**Election notes**

In the core area of Major Field at least 8 ECTS have to be chosen.

<b>Vibration Theory (K) (Election: at least 8 credits)</b>			
T-MACH-105290	Vibration Theory	4 CR	Fidlin
T-MACH-105210	Machine Dynamics	5 CR	Proppe
T-MACH-105294	Mathematical Methods of Vibration Theory	6 CR	Fidlin
T-MACH-105372	Theory of Stability	6 CR	Fidlin
<b>Vibration Theory (E) (Election: at most 9 credits)</b>			
T-MACH-105226	Dynamics of the Automotive Drive Train	4 CR	Fidlin
T-MACH-111260	Dynamics of Electro-Mechanical Systems	5 CR	Altoé, Fidlin
T-MACH-105514	Experimental Dynamics	5 CR	Fidlin
T-MACH-105439	Introduction to Nonlinear Vibrations	7 CR	Fidlin
T-MACH-105224	Machine Dynamics II	4 CR	Proppe
T-MACH-105349	Computational Dynamics	4 CR	Proppe
T-MACH-105373	Practical Training in Measurement of Vibrations	4 CR	Fidlin

**Competence Certificate**

Oral exams: duration approx. 5 minutes per credit point.

Amount, type and scope of the success control can vary according to individual choice.

**Prerequisites**

none

**Competence Goal**

The students know different methods which may be applied for the analysis of investigation of vibrations problems. They are able to treat one or multiple degrees of freedom systems as well as vibrating continua. The goal is to establish a chain from physical modeling via mathematical solution to an interpretation of the results. Based on the courses which are chosen the knowledge has emphasis on theoretical investigations, approximation methods or experimental methods and applications in automotive engineering.

**Workload**

The work load is about 480 hours, corresponding to 16 credit points. 1 LP = 30 working hours

**Learning type**

Lectures, Tutorials

## M

**10.55 Module: Master's Thesis [M-MACH-102858]**

**Responsible:** Prof. Dr.-Ing. Bettina Frohnäpfel  
**Organisation:** KIT Department of Mechanical Engineering

**Part of:** [Master's Thesis](#)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
30	Grade to a tenth	Each term	1 term	German	4	1

Mandatory			
T-MACH-105299	<a href="#">Master's Thesis</a>	30 CR	Heilmaier

**Competence Certificate**

The module Master Thesis consists of a written master thesis and an oral presentation of a scientific subject chosen by the student himself/herself or given by the supervisor. The master thesis is designed to show that the student is able to deal with a problem of his/her subject area in an independent manner and within the given period of time using scientific methods.

The maximal processing time of the master thesis takes six months. With consent of the examiner the thesis can be written in another language than German as well. The date of issue of the subject has to be fixed by the supervisor and the student and to be put on record at the examination board. The subject of the master thesis may be only returned once and only within the first month of processing time.

On a reasoned request of the student, the examination board can extend the processing time by up to three months. If the master thesis is not completed in time, this examination is "failed" (5,0), unless the student is not responsible.

The master thesis is to be evaluated by not less than a professor or a senior scientist according to § 14 Abs. 3 Ziff. 1 KITGor habilitated members of the KIT Faculty of Mechanical Engineering and another examiner. Generally, one of the two examiners is the person who has assigned the thesis. If the examiners do not agree, the master thesis is graded by the examination board within this assessment; another expert can be appointed too. The master thesis has to be graded within a period of six weeks after the submission.

The colloquium presentation must be held within 6 weeks after the submission of the master thesis. The presentation should last around 30 minutes and is followed by a scientific discussion with the present expert audience.

**Prerequisites**

The prerequisite for admission to the master's thesis module is that the student has successfully passed module examinations totaling 74 CP and has met all requirements according to the notification of admission / access statutes (e.g. proof of professional internship).

As to exceptions, the examination board decides on a request of the student (see § 14 (1) SPO).

**Modeled Conditions**

The following conditions have to be fulfilled:

- You need to have earned at least 74 credits in the following fields:
  - Advanced Engineering Fundamentals
  - Specialization

**Competence Goal**

The student is able to work independently on a defined, subject-relevant theme based on scientific criteria within a given period of time. The student is able to do research independently, to analyze information, to abstract as well as collect and recognize basic principles and regularities on the basis of less structured information. He/she overviews the given scientific question, is able to choose sophisticated scientific methods and techniques, and use them to solve this question and to identify further potentials, respectively. In addition, this will be carried out in consideration of social and/or ethical aspects.

The student can interpret, evaluate, and if needed plot the results obtained in a more sophisticated way. He/she is able to clearly structure his scientific work and (a) to communicate it in written form using state-of-the-art technical terminology as well as (b) to present it in oral form and discuss it with experts.

**Content**

The student shall be allowed to make suggestions for the topic of his/her master thesis. The topic is set by the supervisor of the thesis in accordance with § 14 (3) SPO.

**Workload**

The workload for the preparation and presentation of the master thesis is about 900 hours.

**Competence Goal**

Students will deepen and explain mathematical methods and transfer them to a variety of engineering problems. They are able to select suitable methods and transfer them to new problems.

**Content**

see chosen brick course.

**Workload**

The work load is about 180 hours, corresponding to 6 credit points.

**Learning type**

Lectures, Tutorials

## M

**10.57 Module: Modeling and Simulation (MSc-Modul 05, MS) [M-MACH-102592]**

**Responsible:** Prof. Dr.-Ing. Kai Furmans  
 Prof. Dr.-Ing. Marcus Geimer  
 Prof. Dr.-Ing. Luise Kärger

**Organisation:** KIT Department of Mechanical Engineering

**Part of:** [Advanced Engineering Fundamentals](#)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
7	Grade to a tenth	Each winter term	1 term	German/English	4	2

Modeling and Simulation (Election: 7 credits)			
T-MACH-113699	<a href="#">Numerical Methods for Engineering Applications</a>	4 CR	Kärger
T-MACH-113862	<a href="#">Simulation with Lumped Parameters</a>	3 CR	Geimer
T-MACH-105297	<a href="#">Modeling and Simulation</a>	7 CR	Furmans, Geimer, Kärger

#### Competence Certificate

see individual courses/ bricks

#### Prerequisites

none

#### Competence Goal

After completing the module, students will be able to assess when a simulation can be used sensibly and which simulation methods are suitable for a given problem. They can create a model for an initial problem and can explain and implement algorithms for solving a model. They will acquire in-depth knowledge of how a system can be modelled and parameterized. They will be able to carry out simulation studies, evaluate simulation results and detect and avoid errors in the simulation.

#### Content

The basics of discrete-time modeling are taught using the example of simulation with lumped parameters. For this purpose, modeling in the disciplines of mechanics, electrics and hydraulics is shown as an example, and analogies are drawn. Furthermore, possibilities for simulation coupling of the disciplines are shown. The students solve exemplary tasks with the help of simulation and briefly summarize the solutions.

Simulation models with distributed parameters are time- and space-dependent and are used, for example, to calculate the strength and crashworthiness of components or to calculate and design flow processes. Conservation and constitutive equations are formulated for modeling. The resulting partial differential equations (PDE) cannot usually be solved analytically and require numerical methods. The basic assumptions and techniques of important numerical methods (MGR, FDM, FEM, FVM) are taught. In computer exercises, students also learn to implement the methods in software and to evaluate their suitability for solving given problems.

#### Annotation

A total of 7 LP are acquired.

Students choose either T-MACH-113699 together with T-MACH-113862, or T-MACH-105297 in summer semester 25.

#### Workload

Attendance time: 75 hours (equivalent to 5 SWS)

Self-study: 135 hours

#### Learning type

Lecture and Tutorials

**M****10.58 Module: Product Development - Dimensioning of Components (MSc-Modul 06, PE-B) [M-MACH-102593]**

**Responsible:** Prof. Dr.-Ing. Volker Schulze  
**Organisation:** KIT Department of Mechanical Engineering

**Part of:** [Advanced Engineering Fundamentals](#)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
7	Grade to a tenth	Each summer term	1 term	German/English	4	2

Mandatory			
T-MACH-105383	<a href="#">Product Development - Dimensioning of Components</a>	7 CR	Dietrich, Schulze

**Competence Certificate**  
 see course ("Teilleistung")

**Prerequisites**  
 none

**Competence Goal**  
 The students...

- are capable to design and dimension components according to their load.
- can include mechanical material properties from the mechanical material test in the dimensioning process.
- can identify superimposed total loads and critical loads on simple components and to compute them.
- acquire the skill to select materials based on the application area of the components and respective loads.

**Content**

The aim of the lecture is to present the topics of the dimensioning and the material science in their connection and to learn how to deal with corresponding methods and the combination thereof.

For the prospective engineer the most important educational objective is to understand the interaction of these topics while the interplay of the individual material stresses in the component are clarified.

**The topics in detail are**

- Structural dimensioning: basic stresses, superimposed stresses, notch influence, fatigue limit, fatigue strength, assessment of cracked components, operational strength, residual stresses, high temperature stress and corrosion
- Material selection: Basics, material indices, material selection diagrams, Ashby procedure, multiple boundary conditions, target conflicts, shape and efficiency.

**Workload**

The workload for the lecture "Product Development - Dimensioning of Components" is 210 h per semester and consists of the presence during the lectures (50 h) including tutorials, preparation and rework time at home (80 h) and preparation time for the oral exam (80 h).

**Learning type**

Lectures  
 Tutorials

## M

**10.59 Module: Product Development – Methods of Product Engineering [M-MACH-102718]****Responsible:** Prof. Dr.-Ing. Albert Albers**Organisation:** KIT Department of Mechanical Engineering**Part of:** [Advanced Engineering Fundamentals](#)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
6	Grade to a tenth	Each summer term	1 term	German/English	4	3

Mandatory			
T-MACH-109192	<a href="#">Methods and Processes of PGE - Product Generation Engineering</a>	6 CR	Albers, Burkardt, Matthesen

**Competence Certificate**

See course ("Teilleistung")

**Prerequisites**

None

**Competence Goal**

The students are able to ...

- classify product development in companies and differentiate between different types of product development.
- name the relevant influencing factors of a market for product development.
- name, compare and use the central methods and process models of product development within moderate complex technical systems.
- explain problem solving techniques and associated development methods.
- explain product profiles and to differentiate and choose suitable creative techniques of solution/idea generation finding on this basis.
- use design guidelines to create simple technical systems and to explain these guidelines.
- name and compare quality assurance methods; to choose and use suitable methods for particular applications.
- explain the different methods of design of experiment.
- explain the costs in development process.

**Content**

Basics of Product Development: Basic Terms, Classification of the Product

Development into the industrial environment, generation of costs / responsibility for costs

Concept Development: List of demands / Abstraction of the Problem Definition / Creativity Techniques / Evaluation and selection of solutions

Drafting : Prevailing basic rules of Design / Design Principles as a problem oriented accessory

Rationalization within the Product Development: Basics of Development

Management/ Simultaneous Engineering and Integrated Product Development/Development of Product

Lines and Modular Construction Systems

Quality Assurance in early Development Phases : Methods of Quality Assurance in an overview/QFD/FMEA

**Workload**

1. Time of presence lecture: 15 \* 3h = 45 h

2. Prepare/follow-up lecture: 15 \* 4,5 h = 67,5 h

3. Time of presence exercise: 4 \* 1,5h = 6 h

4. Prepare/follow-up exercise: 4 \* 3 h = 12 h

5. Exam preparation and time of presence: 49,5 h

Total: 180 h = 6 LP

**Learning type**

**M****10.60 Module: Supplementary Studies on Science, Technology and Society [M-FORUM-106753]**

**Responsible:** Dr. Christine Mielke  
Christine Myglas

**Organisation:**

**Part of:** [Additional Examinations](#) (Usage from 10/1/2024)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
16	Grade to a tenth	Each term	3 terms	German	4	1

**Election notes**

Students have to self-record the achievements obtained in the Supplementary Studies on Science, Technology and Society in their study plan. FORUM (formerly ZAK) records the achievements as "non-assigned" under "ÜQ/SQ-Leistungen". Further instructions on self-recording of achievements can be found in the FAQ at <https://campus.studium.kit.edu/> and on the FORUM homepage at <https://www.forum.kit.edu/english/>. The title of the examination and the amount of credits override the modules placeholders.

If you want to use FORUM achievements for both your Interdisciplinary Qualifications and for the Supplementary Studies, please record them in the Interdisciplinary Qualifications first. You can then get in contact with the FORUM study services ([stg@forum.kit.edu](mailto:stg@forum.kit.edu)) to also record them in your Supplementary Studies.

In the Advanced Unit you can choose examinations from three subject areas: "About Knowledge and Science", "Science in Society" and "Science in Social Debates". It is advised to complete courses from each of the three subject areas in the Advanced Unit.

To self-record achievements in the Advanced Unit, you have to select a free placeholder partial examination first. The placeholders' title do *not* affect which achievements the placeholder can be used for!

<b>Mandatory</b>			
T-FORUM-113578	<a href="#">Lecture Series Supplementary Studies on Science, Technology and Society - Self Registration</a>	2 CR	Mielke, Myglas
T-FORUM-113579	<a href="#">Basic Seminar Supplementary Studies on Science, Technology and Society - Self Registration</a>	2 CR	Mielke, Myglas
<b>Advanced Unit Supplementary Studies on Science, Technology and Society (Election: at least 12 credits)</b>			
T-FORUM-113580	<a href="#">Elective Specialization Supplementary Studies on Science, Technology and Society / About Knowledge and Science - Self-Registration</a>	3 CR	Mielke, Myglas
T-FORUM-113581	<a href="#">Elective Specialization Supplementary Studies on Science, Technology and Society / Science in Society - Self-Registration</a>	3 CR	Mielke, Myglas
T-FORUM-113582	<a href="#">Elective Specialization Supplementary Studies on Science, Technology and Society / Science in Public Debates - Self Registration</a>	3 CR	Mielke, Myglas
<b>Mandatory</b>			
T-FORUM-113587	<a href="#">Registration for Certificate Issuance - Supplementary Studies on Science, Technology and Society</a>	0 CR	Mielke, Myglas

**Competence Certificate**

The monitoring is explained in the respective partial achievement.

They are composed of:

- Protocols
- Reflection reports
- Presentations
- Preparation of a project work
- An individual term paper
- An oral examination
- A written exam

Upon successful completion of the supplementary studies, graduates receive a graded report and a certificate issued by the FORUM.

**Prerequisites**

The course is offered during the course of study and does not have to be completed within a defined period. Enrollment is required for all assessments of the modules in the supplementary studies.

Participation in the supplementary studies is regulated by § 3 of the statutes. KIT students register for the supplementary studies by selecting this module in the student portal and booking a performance themselves. Registration for courses, assessments, and exams is regulated by § 8 of the statutes and is usually possible shortly before the start of the semester.

The course catalog, module description (module manual), statutes (study regulations), and guidelines for creating the various written performance requirements can be downloaded from the FORUM homepage at <https://www.forum.kit.edu/begleitstudium-wtg.php>.

**Registration and exam modalities****PLEASE NOTE:**

Registration on the FORUM, i.e. additionally via the module selection in the student portal, enables students to receive up-to-date information about courses or study modalities. In addition, registering on the FORUM ensures that you have proof of the credits you have earned. As it is currently (as of winter semester 24-25) not yet possible to continue additional credits acquired in the Bachelor's programme electronically in the Master's programme, we strongly advise you to digitally secure the credits you have earned by archiving the Bachelor's transcript of records yourself and by registering on FORUM.

In the event that a transcript of records of the Bachelor's certificate is no longer available - we can only assign the achievements of registered students and thus take them into account when issuing the certificate.

**Competence Goal**

Graduates of the Supplementary Studies on Science, Technology, and Society gain a solid foundation in understanding the interplay between science, the public, business, and politics. They develop practical skills essential for careers in media, political consulting, or research management. The program prepares them to foster innovation, influence social processes, and engage in dialogue with political and societal entities. Participants are introduced to interdisciplinary perspectives, encompassing social sciences and humanities, to enhance their understanding of science, technology, and society. The teaching objectives of this supplementary degree program include equipping participants with both subject-specific knowledge and insights from epistemological, economic, social, cultural, and psychological perspectives on scientific knowledge and its application in various sectors. Students are trained to critically assess and balance the implications of their actions at the intersection of science and society. This training prepares them for roles as students, researchers, future decision-makers, and active members of society.

Through the program, participants learn to contextualize in-depth content within broader frameworks, independently analyze and evaluate selected course materials, and communicate their findings effectively in both written and oral formats. Graduates are adept at analyzing social issues and problem areas, reflecting on them critically from a socially responsible and sustainable standpoint.

## Content

The Supplementary Studies on Science, Technology and Society can be started in the 1st semester of the enrolled degree programme and is not limited in time. The wide range of courses offered by FORUM makes it possible to complete the program usually within three semesters. The supplementary studies comprises 16 or more credit points (LP). It consists of **two modules: the Basic Module (4 LP) and the Advanced Module (12 LP)**.

The **basic Module** comprises the compulsory courses 'Lecture Series Supplementary Studies on Science, Technology and Society' and a basic seminar with a total of 4 LP.

The **Advanced Module** comprises courses totalling 12 LP in the humanities and social sciences subject areas 'On Knowledge and Science', 'Science in Society' and 'Science in Public Debates'. The allocation of courses to the accompanying study programme can be found on the homepage <https://www.forum.kit.edu/wtg-aktuelland> in the printed FORUM course catalogue.

The 3 thematic subject areas:

### Subject area 1: About Knowledge and Science

This is about the internal perspective of science: students explore the creation of knowledge, distinguishing between scientific and non-scientific statements (e.g., beliefs, pseudo-scientific claims, ideological statements), and examining the prerequisites, goals, and methods of knowledge generation. They investigate how researchers address their own biases, analyze the structure of scientific explanatory and forecasting models in various disciplines, and learn about the mechanisms of scientific quality assurance.

After completing courses in the "Knowledge and Science" area, students can critically reflect on the ideals and realities of contemporary science. They will be able to address questions such as: How robust is scientific knowledge? What are the capabilities and limitations of predictive models? How effective is quality assurance in science, and how can it be improved? What types of questions can science answer, and what questions remain beyond its scope?

### Subject area 2: Science in Society

This focuses on the interactions between science and different areas of society, such as how scientific knowledge influences social decision-making and how social demands impact scientific research. Students learn about the specific functional logics of various societal sectors and, based on this understanding, estimate where conflicts of goals and actions might arise in transfer processes—for example, between science and business, science and politics, or science and journalism. Typical questions in this subject area include: How and under what conditions does an innovation emerge from a scientific discovery? How does scientific policy advice work? How do business and politics influence science, and when is this problematic? According to which criteria do journalists incorporate scientific findings into media reporting? Where does hostility towards science originate, and how can social trust in science be strengthened?

After completing courses in the "Science in Society" area, students can understand and assess the goals and constraints of actors in different societal sectors. This equips them to adopt various perspectives of communication and action partners in transfer processes and to act competently at various social interfaces with research in their professional lives.

### Subject area 3: Science in Public Debates

The courses in this subject area provide insights into current debates on major social issues such as sustainability, digitalization, artificial intelligence, gender equality, social justice, and educational opportunities. Public debates on complex challenges are often polarized, leading to oversimplifications, defamation, or ideological thinking. This can hinder effective social solution-finding processes and alienate people from the political process and from science. Debates about sustainable development are particularly affected, as they involve a wide range of scientific and technological knowledge in both problem diagnosis (e.g., loss of biodiversity, climate change, resource consumption) and solution development (e.g., nature conservation, CCS, circular economy).

By attending courses in "Science in Public Debates," students are trained in an application-oriented way to engage in factual debates—exchanging arguments, addressing their own prejudices, and handling contradictory information. They learn that factual debates can often be conducted more deeply and with more nuance than is often seen in public discourse. This training enables them to handle specific factual issues in their professional lives independently of their own biases and to be open to differentiated, fact-rich arguments.

### Supplementary credits:

Additional LP (supplementary work) totalling a maximum of 12 LP can also be acquired from the complementary study programme (see statutes for the WTG complementary study programme § 7). § 4 and § 5 of the statutes remain unaffected by this. These supplementary credits are not included in the overall grade of the accompanying study programme. At the request of the participant, the supplementary work will be included in the certificate of the accompanying study programme and marked as such. Supplementary coursework is listed with the grades provided for in § 9.

### Module grade calculation

The overall grade of the supplementary course is calculated as a credit-weighted average of the grades that were achieved in the advanced module.

**Annotation**

Climate change, biodiversity crisis, antibiotic resistance, artificial intelligence, carbon capture and storage, and gene editing are just a few areas where science and technology can diagnose and address numerous social and global challenges. The extent to which scientific findings are considered in politics and society depends on various factors, such as public understanding and trust, perceived opportunities and risks, and ethical, social, or legal considerations.

To enable students to use their expertise as future decision-makers in solving social and global challenges, we aim to equip them with the skills to navigate the interfaces between science, business, and politics competently and reflectively. In the Supplementary Studies, they acquire foundational knowledge about the interactions between science, technology, and society.

They learn:

- How reliable scientific knowledge is produced,
- how social expectations and demands influence scientific research, and
- how scientific knowledge is adopted, discussed, and utilized by society.

The program integrates essential insights from psychology, philosophy, economics, social sciences, and cultural studies into these topics. After completing the supplementary studies programme, students can place the content of their specialized studies within a broader social context. This prepares them, as future decision-makers, to navigate competently and reflectively at the intersections between science and various sectors of society, such as politics, business, or journalism, and to contribute effectively to innovation processes, public debates, or political decision-making.

**Workload**

The workload is made up of the number of hours of the individual modules:

- Basic Module approx. 120 hours
- Advanced Module approx. 390 hours
- > Total: approx. 510 hours

In the form of supplementary services, up to approximately 390 hours of work can be added.

**Recommendation**

It is recommended to complete the supplementary study program in three or more semesters, beginning with the lecture series on science, technology, and society in the summer semester. Alternatively, you can start with the basic seminar in the winter semester and then attend the lecture series in the summer semester.

Courses in the Advanced Module can be taken simultaneously. It is also advised to complete courses from each of the three subject areas in the advanced unit.

**Learning type**

- Lectures
- Seminars/Project Seminars
- Workshops

## 11 Courses

**T** 11.1 Course: Actuators and Sensors in Nanotechnology [T-MACH-105238]

## V

**Additive Manufacturing Processes**

2150702, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

The aim is to teach students the fundamentals of additive manufacturing in the context of mechanical engineering. The most important technologies, their possible applications, materials and process parameters, as well as their advantages and disadvantages, will be examined. By the end of the course, students should be able to differentiate between the relevant processes and evaluate them for typical applications in mechanical engineering.

**Learning Outcomes:**

The course “Additive Manufacturing Processes” provides participants with in-depth knowledge of industrially relevant additive manufacturing processes and their process chains. During the course, students learn the theoretical principles and practical application aspects of the following processes:

- FDM: Fused deposition modeling
- MEX: Material extrusion
- SHL: Sheet lamination
- MJT: Material jetting
- PBF: Powder bed fusion
- BJT: Binder jetting
- DED: Directed energy deposition
- VPP: Vat photopolymerization

In addition, the following topics are covered:

- Holistic view of the process chain
- Materials for additive manufacturing processes (production and characterisation)
- Design methods and simulation in additive manufacturing
- Process monitoring and quality assurance
- Future trends and innovative technologies

The acquired knowledge is supplemented by practical lectures from industry, which offer valuable insights into current applications, challenges and innovations in additive manufacturing.

**Workload:**

regular attendance: 21 hours  
self-study: 99 hours

**Organizational issues**

Die Bekanntgabe der konkreten Praxisvorträge erfolgt in der ersten Vorlesung.

**Literature****Medien:**

Skript zur Veranstaltung wird über ilias (<https://ilias.studium.kit.edu/>) bereitgestellt.

**Media:**

Lecture notes will be provided in ilias (<https://ilias.studium.kit.edu/>).

## Advanced CFD with OpenFOAM

2153470, WS 24/25, 2 SWS, Language: English, [Open in study portal](#)

Lecture (V)  
Blended (On-Site/Online)

### Content

OpenFOAM® software toolbox provides a collection of ready-to-go solvers and libraries for application in different fields of fluid mechanics. In spite of the great variety of available tools, research-oriented application of OpenFOAM® is often linked to the necessity of significant modifications in boundary conditions and governing transport equations due to the novelty of the proposed models rarely available "out-of-the-box". In this course we approach the development and extension of numerical models in the framework of OpenFOAM®. The course focuses on:

- modification/implementation of boundary conditions (e.g. time-dependent boundary conditions),
- extension of implemented transport equations (e.g. extension of momentum equation with a source term for representation of a solid body in the fluid domain - porosity or immersed boundary method),
- solver extension with additional transport equations (e.g. solver extension with passive scalar equation for computation of temperature),
- implementation of new models (e.g. modification or implementation of a new turbulence model).

The course is based on lectures, tutorials and assignments, which will have to be independently accomplished by the course participants.

Course content:

- basic OpenFOAM® mathematics (tensorial operations, discretization),
- advanced customization of boundary conditions and pre/post-processing with third-party tools (swak4Foam: groovyBC, funkySetField, funkyDoCalc),
- introduction to C++,
- advanced run-time OpenFOAM® modification with codeStream,
- customizing solvers or developing new solvers in OpenFOAM®,
- git for code development.

## Aerodynamics

2153481, WS 24/25, 3 SWS, Language: German, [Open in study portal](#)

Lecture / Practice (VÜ)  
Blended (On-Site/Online)

### Content

The students are able to derive, understand phenomenologically and apply the basic equation of incompressible aerodynamics based on the potential and boundary layer theory and vortex dynamics. The students are able to calculate the forces and moments occurring on an airfoil or wing with the airfoil theory and the finite wing theory and to justify them physically. The design principles, operation and factors that can limit the performance of airfoils and wings are discussed. The students know the limitations of these theories and know approaches to circumvent them. The students can explain the effects of different unsteady effects on the lift and drag characteristics of wings with the basics of transient aerodynamics and also discuss and describe them using the example of wind turbines.

Students will be able to use their knowledge of the fundamentals of flight mechanics to explain how different manoeuvres are performed for an aircraft and how the available measurement technology from the cockpit perspective can support the correct executions of such manoeuvres. Weather permitting, students will have the opportunity to experience and solidify the fundamentals of aircraft aerodynamics and flight mechanics themselves by flying in a glider.

This lecture is designed and carried out jointly with the student university group "Akaflieg".

<b>V</b>	<b>Applied Cryo-Technology</b> 2190421, SS 2025, 2 SWS, Language: German/English, <a href="#">Open in study portal</a>	<b>Lecture (V)</b> <b>On-Site</b>
----------	---	--------------------------------------

## Content Description

Cryogenic technology is an indispensable part of an industrialized society with continuous growing importance. Until a few decades ago cryo-technology was essentially limited to specific applications in medicine, aerospace, superconducting magnets, and diagnostics, today the spectrum has expanded substantially including food-sector, energy transport, and energy storage, for example LNG (at  $\approx 110$  Kelvin) or liquid hydrogen (at  $\approx 20$  Kelvin). It is foreseeable that the operation of cryogenic infrastructures will be of central importance to society.

The term cryogenics describes the techniques for generating and operating systems with fluids at temperatures below 120 Kelvin and covers a wide range of liquids as well as gaseous cryogens such as helium (4.2 Kelvin), hydrogen (20 Kelvin) up to natural gas (LNG 110 Kelvin).

The operation of cryo-plants requires fundamental knowledge of the heat and phase transition of fluids in order to be able to map energetically efficient processes and plan them technically. This requires basic knowledge from various disciplines of systems engineering, process technology, and metrology with special consideration of low temperatures. The effects of low temperatures not only influence the design and dimensioning of components and piping, but also affect the dynamics of cryogenic systems and must be taken into account accordingly in process measuring and control technology. The safety engineering of cryogenic systems also differs from that of conventional piping or chemical carrier networks. For example, high pressures can build up in cryogenic systems in the event of a thermal collapse, so suitable measures must be taken into account at the planning stage.

Another aspect in the realization of cryogenic plants is the consideration of the specific material properties at low temperatures, which differ from those of conventional engineering. Thermal and mechanical parameters for further design can be derived from the thermodynamic relationships as well as the microstructural properties. In addition to metallic alloys, composite materials are also considered as structural and functional materials.

## Scope

The aim of the lecture is to teach the basics of refrigeration and liquefaction of fluids with a boiling temperature below 120 K. For this purpose, the essentials of thermodynamics, phase transitions and heat transfer mechanisms must be understood and it should be possible to balance the main components of such a cryogenic system.

The relationship of thermal and mechanical material properties at cryogenic temperatures to the physical background is established. Practical examples are used to illustrate the influence on the design.

The basic design of cryostats is explained in detail and illustrated by examples. The essential design principles and standard components of the measurement and control technology, as well as the essential standards and safety devices are explained.

## Content

- Introduction to cryo-technology
- Thermodynamic process and technology of cryogenic generation (Joule-Thompson/Brayton/Claude/Stirling)
- Cryogenic fluids
- Examples of cryogenic applications and their components (bath-, forced-flow-, contact cooling)
- Thermal insulation (vacuum-, super-insulation) and thermal shields
- Storage and transfer of cryogenic fluids (e.g. canister, truck, pipeline, ship)
- Requirements for process measuring and control technology within cryogenic environment
- Specific design features for cryostat systems
- Impact of low temperature on metallic alloys and composite materials
- Requirements and qualification of structural and functional materials for cryogenic temperature regime
- Equipment for material characterization at low temperature

## V

**Applied Materials Simulation**

2182614, SS 2025, 4 SWS, Language: German, [Open in study portal](#)

Lecture / Practice (VÜ)  
Online

**Content**

This lecture should give the students an overview of different simulation methods in the field of materials science and engineering. Numerical methods are presented and their use in different fields of application and size scales shown and discussed. On the basis of theoretical as well as practical aspects, a critical examination of the opportunities and challenges of numerical material simulation shall be carried out.

The student can

- define different numerical methods and distinguish their range of application
- approach issues by applying the finite element method and discuss the processes and results
- understand complex processes of metal forming and crash simulation and discuss the structural and material behavior
- define and apply the physical fundamentals of particle-based simulation techniques to applications of materials science
- illustrate the range of application of atomistic simulation methods and distinguish between different models

preliminary knowledge in mathematics, physics and materials science recommended

regular attendance: 34 hours

exercise: 11 hours

self-study: 165 hours

oral exam ca. 35 minutes

no tools or reference materials

admission to the exam only with successful completion of the exercises

**Organizational issues**

Die Vorlesung wird nur als Aufzeichnung angeboten!

## Flows with chemical reactions

2153406, WS 24/25, 2 SWS, Language: German/English, [Open in study portal](#)

Lecture (V)  
Blended (On-Site/Online)

### Content

The students can describe flow scenarios, where a chemical reaction is confined to a thin layer. They can choose simplifying approaches for the underlying chemistry and discuss the problems with focus on the fluid mechanic aspects. The students are able to solve simple problems analytically. Furthermore, they are qualified to discuss simplifications as relevant for an efficient numerical solution of complex problems.

In the lecture we mainly consider problems, where chemical reaction is confined to a thin layer.

The problems are solved analytically or they are at least simplified allowing for efficient numerical solution procedures. We apply simplified chemistry and focus on the fluid mechanic aspects of the problems.

### Artificial Intelligence in Production

2149921, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

**Content**

The module AI in Production is designed to teach students the practical, holistic integration of machine learning and artificial intelligence methods in production. The course is oriented towards the phases of the CRISP-DM process with the aim of developing a deep understanding of the necessary steps and content-related aspects (methods) within the individual phases. In addition to teaching the practical aspects of integrating the most important machine learning methods, the focus is primarily on the necessary steps for data generation and data preparation as well as the implementation and validation of the methods in an industrial environment.

The lecture "Artificial Intelligence in Production" deals with the theoretical basics in a practical context. Here, the six phases of the CRISP-DM process are run through sequentially and the necessary basics for the implementation of the respective phases are taught. The course first deals with the data sources that are prevalent in the production environment. Subsequently, possibilities for target-oriented data acquisition as well as data transfer and data storage are introduced. Possibilities for data filtering and data preprocessing are discussed and production-relevant aspects are pointed out. The course then covers in detail the necessary algorithms and procedures for implementing AI in production, before techniques and fundamentals for making the models permanent in production (deployment) are discussed.

**Learning Outcomes:**

The students

- understand the relevance for the application of AI in production and know the main drivers and challenges.
- will understand the CRISP-DM process for implementing AI projects in manufacturing. Students will be able to name the main data sources, data ingestion methods, communication architectures, models and methods for data processing.
- will understand the main machine learning techniques and be able to contrast and select them in the context of industrial issues.
- are able to assess whether a specific problem in the context of production can be solved in a target-oriented manner using machine learning methods, as well as what the necessary steps are for implementation.
- are able to assess the most important challenges and name possible approaches to solve them.
- are able to apply the phases of the CRISP-DM to a problem in production. Students will know the steps necessary to build a data pipeline and will be able to do so theoretically in the context of a real-world use case.
- are able to evaluate the results of common deep learning methods and, based on this, to theoretically elaborate and theoretically apply proposed solutions (from the field of machine learning).

**Workload:****MACH:**

regular attendance: 31,5 hours

self-study: 88,5 hours

**Particle Dynamics and Atomistic Simulation**

2181740, SS 2025, 3 SWS, Language: English, [Open in study portal](#)

Lecture / Practice (VÜ)  
On-Site

## Content

Particle-based methods are numerical techniques used to simulate and analyse systems consisting of many discrete particles. They are particularly useful in fields where traditional continuum mechanical approaches are insufficient, such as granular materials, complex fluids, and defects in solids. In the lecture, the Discrete Element Method (DEM) for particles and Molecular Dynamics (MD) for the atomistic description of material behaviour will be covered. These methods span different length and time scales.

1. Introduction to Particle-Based Methods
  - a) origin and application
  - b) classification of particle-based methods
2. Fundamentals of Particle Dynamics
  - a) Newtonian mechanics and conservation laws
  - b) contact mechanics and friction laws
  - c) kinematics and dynamics of particles
3. Discrete Element Method (DEM)
  - a) principles and fundamentals
  - b) numerical implementation: discretizing space and time
  - c) particle detection and contact modelling
  - d) application examples
4. Atomistic Methods: Molecular Dynamics (MD) and Statics (MS)
  - a) fundamentals of atomistic models
  - b) interaction: interatomic potentials
    - i. pair potentials and their limits
    - ii. many-body potentials
  - c) integration methods (e.g., Verlet, Leap-Frog)
  - d) periodic boundary conditions and neighbour lists
  - e) applications in materials science
5. Structural Analysis:
  - a) classification of neighbourhoods, distribution functions
  - b) defect energy
  - c) stresses, strains
6. Statistical Aspects of Atomistic Models
  - a) phase space
  - b) physical ensembles: microcanonical, canonical, grand canonical
  - c) control of temperature, pressure, stresses: thermostats and barostats
  - d) fluctuations and physical properties

The lecture covers both fundamental and advanced aspects of particle-based methods, with a particular focus on simple atomistic approaches. The accompanying computer exercises are designed to deepen and complement the lecture content through practical examples using the freely available particle simulation tool "LAMMPS" and to serve as a forum for detailed questions from students.

**Objective:** The student will be able to

- explain the physical principles of particle-based simulations,
- describe the application areas of particle-based simulation methods,
- apply particle-based simulation methods to address problems in materials science, materials engineering, and process engineering.

Recommended Prerequisites: mathematics, physics, and materials science

Lecture: 22.5 hours

Exercises: 12 hours

Self-study: 85.5 hours

**Oral exam:** approximately 30 minutes

## Organizational issues

Die Vorlesung wird auf Englisch angeboten!

## Literature

1. Understanding Molecular Simulation: From Algorithms to Applications, Daan Frenkel and Berend Smit (Academic Press, 2001) wie alle guten MD Bücher stark aus dem Bereich der physikalischen Chemie motiviert und auch aus diesem Bereich mit Anwendungsbeispielen gefüllt, trotzdem für mich das beste Buch zum Thema!
2. Computer simulation of liquids, M. P. Allen and Dominic J. Tildesley (Clarendon Press, Oxford, 1996) Immer noch der Klassiker zu klassischen MD Anwendungen. Weniger stark im Bereich der Nichtgleichgewichts-MD.
3. Computational Granular Dynamics. T. Pöschel, T. Schwager, Springer, 2005. Diskrete Element Methoden.
4. Lecture Slides and Exercises.

V

### Automated Visual Inspection and Image Processing

2424169, WS 24/25, 4 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

#### Content

##### Topics covered:

- sensors and concepts for image acquisition
- light and colour
- image signals (system theory, Fourier transformation, stochastic processes)
- excursion to wave optics
- pre-processing and image enhancement
- image restoration
- segmentation
- morphological image processing
- texture analysis
- detection
- image pyramids, multi scale analysis and wavelet-transform

##### Educational objective:

- Students have a sound knowledge regarding the basic concepts and methods of image processing (pre-processing and image enhancement, image restoration, image segmentation, morphological filtering, texture analysis, detection, image pyramids, multi-scale analysis and the wavelet transform)
- Students are in the position to work out and to evaluate solution concepts for problems of automated visual inspection
- Students have a sound knowledge of the different sensors and methods for the acquisition of image data as well as of the relevant optical principles
- Students know different concepts to describe image data and they know the essential system theoretical concepts and interrelations

#### Organizational issues

Die Erfolgskontrolle wird in der Modulbeschreibung erläutert.

#### Empfehlungen:

Grundkenntnisse der Optik und der Signalverarbeitung sind hilfreich.

#### Literature

## V

**Automotive Engineering I**

2113805, WS 24/25, 4 SWS, Language: German, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

1. History and future of the automobile
2. Driving mechanics: driving resistances and driving performance, mechanics of longitudinal and lateral forces, active and passive safety
3. Drive systems: combustion engine, hybrid and electric drive systems
4. Transmission: clutches (e.g. friction clutch, visco clutch), transmission (e.g. mechanical transmission, hydraulic fluid transmission)
5. Power transmission and distribution: drive shafts, cardon joints, differentials

**Learning Objectives:**

The students know the movements and the forces at the vehicle and are familiar with active and passive safety. They have proper knowledge about operation of engines and alternative drives, the necessary transmission between engine and drive wheels and the power distribution. They have an overview of the components necessary for the drive and have the basic knowledge, to analyze, to evaluate, and to develop the complex system "vehicle".

**Automotive Engineering II**

2114835, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
On-Site

**Content**

1. Chassis: Wheel suspensions (rear axles, front axles, kinematics of axles), tyres, springs, damping devices
2. Steering elements: Manual steering, servo steering, steer by wire
3. Brakes: Disc brake, drum brake, comparison of designs

Learning Objectives:

The students have an overview of the modules which are necessary for the tracking of a motor vehicle and the power transmission between vehicle bodywork and roadway. They have knowledge of different wheel suspensions, tyres, steering elements, and brakes. They know different design versions, functions and the influence on driving and braking behavior. They are able to correctly develop the appropriate components. They are ready to analyze, to evaluate, and to optimize the complex interaction of the different components under consideration of boundary conditions.

**Lecture (V)**  
**On-Site**

**Content****Lernziele (EN):**

Machine perception and interpretation of the environment for the basis for the generation of intelligent behaviour. Especially visual perception opens the door to novel automotive applications. First driver assistance systems can already improve safety, comfort and efficiency in vehicles. Yet, several decades of research will be required to achieve an automated behaviour with a performance equivalent to a human operator. The lecture addresses students in mechanical engineering and related subjects who intend to get an interdisciplinary knowledge in a state-of-the-art technical domain. Machine vision, vehicle kinematics and advanced information processing techniques are presented to provide a broad overview on 'Seeing vehicles'. Application examples from cutting-edge and future driver assistance systems illustrate the discussed subjects.

**Lehrinhalt (EN):**

1. Driver assistance systems
2. Binocular vision
3. Feature point methods
4. Optical flow/tracking in images
5. Tracking and state estimation
6. Self-localization and mapping
7. Lane recognition
8. Behavior recognition

Nachweis: Written examination 60 minutes

Arbeitsaufwand (EN): 120 hours

## 11.28 Course: Basic Seminar Supplementary Studies on Science, Technology and Society - Self Registration [T-FORUM-113579]

**Responsible:** Dr. Christine Mielke  
Christine Myglas

**Organisation:**

**Part of:** [M-FORUM-106753 - Supplementary Studies on Science, Technology and Society](#)

Type	Credits	Grading scale	Recurrence	Expansion	Version
Completed coursework	2	pass/fail	Each summer term	1 terms	1

### Competence Certificate

Study achievement in the form of a presentation or a term paper or project work in the selected course.

### Prerequisites

None

### Self service assignment of supplementary studies

This course can be used for self service assignment of grade acquired from the following study providers:

- Studium Generale. Forum Wissenschaft und Gesellschaft (FORUM) (ehem. ZAK)
- FORUM (ehem. ZAK) Begleitstudium

### Recommendation

It is recommended that the basic seminar be completed during the same semester as the lecture series "Science in Society". If it is not possible to attend the lecture series and the basic seminar in the same semester, the basic seminar can also be attended in the semesters before the lecture series.

However, attending courses in the advanced unit before attending the basic seminar should be avoided.

**Basics of Technical Logistics I**

2117095, WS 24/25, 4 SWS, Language: German, [Open in study portal](#)

Lecture / Practice (VÜ)  
On-Site

**Content**

- effect model of conveyor machines
- elements for the change of position and orientation
- conveyor processes
- identification systems
- drives
- mechanical behaviour of conveyors
- structure and function of conveyor machines
- elements of intralogistics
- sample applications and calculations in addition to the lectures inside practical lectures

Students are able to:

- Describe processes and machines of technical logistics,
- Model the fundamental structures and the impacts of material handling machines with mathematical models,
- Refer to industrially used machines
- Model real machines applying knowledge from lessons and calculate their dimensions.

**Organizational issues**

Die Erfolgskontrolle erfolgt in Form einer schriftlichen oder mündlichen Prüfung (nach §4 (2), 1 bzw. 2SPO).

The assessment consists of a written or oral exam according to Section 4 (2), 1 or 2 of the examination regulation.

## Beyond Conventional Materials - Metamaterials & Architected Structures

2186100, WS 24/25, 2 SWS, Language: English, [Open in study portal](#)

Lecture (V)  
 Blended (On-Site/Online)

**Content**

Conventional material design focuses on engineering the chemistry and microstructure of solids. Metamaterials go beyond these classical approaches. They are artificial materials that are built from spatially structured building blocks, like lattice-truss architectures. The integration of these rational architectures at the material level grants metamaterials unique unconventional properties which are inaccessible with classical material designs.

The course covers the fundamentals of the mechanics of different metamaterial architectures, discusses design principles and applicable fabrication techniques from the macro- to the nanoscale, as well as their interdependency, and considers emerging application scenarios in medicine, aerospace, microsystem technology, and mobility.

The students learn

- to design beam, shell and plate-based spatial architectures, such as for extreme strength & stiffness, programmable/adaptive behaviors and negative effective properties.
- to mathematically describe and predict the mechanical behavior of such architectural designs.
- the fundamentals of applicable fabrication techniques, including foaming, assembly and 3D-printing, and their design and material implications
- the relationship between architecture & size and how micro- and nanoscale architectures can leverage extreme physical size effects.

preliminary knowledge in mathematics, physics and materials science recommended

regular attendance: 22,5 hours

self-study: 97,5 hours

oral exam: ca. 30 minutes

no tools or reference materials

### Competence Certificate

Oral exam, approximately 30 minutes

### Prerequisites

Successful participation in courses on fluid mechanics and thermodynamics. T-MACH-113976 must not have been started.

### Recommendation

- Profound knowledge on thermodynamics and fluid mechanics is mandatory.
- Machine and processes lecture (LVNr. 3134140) is highly recommended before taking this course.
- The course requires basic knowledge in engineering mathematics and computer programming at an undergraduate level. Basic knowledge in python is strongly recommended.
- We expect students to be interested in applying theoretical knowledge and translate it into real world experiments.

### Annotation

Lectures: 90 min; Lab sessions: 90 minutes (6 weeks)

### Workload

120 hours

Below you will find excerpts from events related to this course:

V

**Boosting the Modern Energy Landscape via Turbo Machines & Machine Learning** ecture (V)  
2169558, WS 24/25, 2 SWS, Language: English, [Open in study portal](#) **On-Site**

## Content

This lecture provides a comprehensive exploration of how small radial flow turbo machines contribute to the modern energy landscape. A typical application of such machines are pressurized fuel cells used as drive train for cars and trucks. From understanding the thermodynamics and flow characteristics of centrifugal compressors and centripetal turbines to practical experiments and the integration of machine learning techniques, students will gain a holistic understanding of the potential of turbo machines for energy conversion efficiency, emissions reduction, and performance optimization. The lecture further provides a hands on sample application of machine learning, with a specific focus on its pivotal role in developing digital twins that utilize sensory data.

During an integrated lab course, learned theoretical A.I. frameworks are applied to a turbo machine test rig for the accurate prediction of the operation and proactive prevention of surge and stall. By engaging in these experimental lab, students explore how sensory data can be leveraged to monitor and optimize the performance of centrifugal compressors. By combining theory and practical lab experience, this course equips students with the knowledge and skills necessary to leverage turbomachinery technology in shaping a sustainable and efficient future energy ecosystem.

The lecture features a distinctive structure consisting of three interconnected layers:

1. **Fundamental Learning:** This initial phase takes place in a traditional classroom setting where students establish a solid understanding of the subject matter.
2. **Hands-On Practical Application:** Students then transition to two dedicated laboratory sessions where they apply the acquired knowledge using real-life equipment, gaining valuable hands-on experience.
3. **Data Analysis and Interpretation:** Following the practical sessions, the lecture moves into two virtual laboratory sessions focused on data-driven techniques. Here, students analyze and interpret the data collected during the hands-on sessions, applying their newfound skills.

This unique approach endows the lecture with a marathon-like nature, requiring students to progress through these phases in sync with their peers. Collaboration is key, as lab sessions are conducted in groups, and students will consolidate and utilize data from all groups. Effective in-group and between-group communication becomes essential for the overall success of the learning experience.

The lecture duration is 21 hours, divided into theory and practical sessions.

pon completing this lecture, students will:

- Gain a comprehensive understanding of radial flow turbo machinery technology and its significance in the modern energy landscape.
- Learn the characteristics of centrifugal compressors and centripetal turbines and how they contribute to energy conversion efficiency, emissions reduction, and performance optimization.
- Engage in practical experiments to explore compressor characteristics, radial flow compressors and turbines, and surge and stall phenomena in radial compressors.
- Be introduced to machine learning principles and applications in turbomachinery technology.
- Gain hands-on experience in building digital twins from sensory data to monitor and optimize centrifugal compressor performance.
- Understand the importance of data-driven predictive maintenance and outlier detection in radial flow turbo machines.
- Learn how to use machine learning techniques to predict and prevent surge and stall issues in centrifugal compressor applications.
- Develop the knowledge and skills necessary to leverage turbomachinery technology in shaping a sustainable and efficient future energy ecosystem.

## Organizational issues

Vorlesung ersetzt Vorlesung-Nr. 2169462 (Turbinen und Verdichterkonstruktionen) ab WS 2023/24

Number of participants are limited due to physical constraints of the integrated lab sessions. To enroll in the lecture, kindly complete the form below. Registration is open from **16.10.2023 (00:00:00)** to **23.10.2023 (23:59:00)** (**Note: The registration period will be extended until 25.10.2023 (23:59:00)**). Following the closure of the registration period, applicants will receive notifications regarding their selection, considering the limited number of available spots.

- Only master level students can be admitted to the course.
- Profound knowledge on thermodynamics and fluid mechanics is mandatory.
- Basic knowledge in python is strongly recommended.
- Machine and processes lecture is highly recommended before taking this course.
- We expect students to be interested in applying theoretical knowledge and translate it into real world experiments.
- Lecture is offered in English.

The lecture is part of the "Research Infrastructures in Research-Oriented Teaching (RIRO)" initiative at KIT.

## V

**Business Administration for Engineers and IT professionals**2122303, WS 24/25, 2 SWS, Language: German/English, [Open in study portal](#)**Seminar (S)  
On-Site****Content**

Learning content

- Competitive strategies, customer value, corporate cultures, lifecycles (technology, business, product), market leadership dynamics.
- Continuum commoditization/differentiation.
- Value chain, core and support functions.
- A company's business portfolio.
- Profit margin sensitivity.
- Profitable and non-profitable products, customers and businesses.
- Drivers of a company's value (McKinsey model), return on invested capital (ROIC), ROIC value driver tree.
- Strategic planning
- Capital investments, discounted cash flow analysis, quantifying of and dealing with risks, cost-estimating methodologies per planning stage.
- Sales, procurement/purchasing, negotiation strategies

Learning objectives

- better understand a company's business, financials and their executives/decision makers
- use the language and metrics of senior executives and hold effective conversations with them
- more effectively sell a solution's or project's operational and financial value to executives and decision makers

**Organizational issues**

Teilnehmerzahl ist begrenzt. Zeit und Ort siehe ILIAS / Number of participants is limited. Time and place see ILIAS.

## CAE-Workshop

2147175, WS 24/25, 3 SWS, Language: German, [Open in study portal](#)

**Block (B)**  
**On-Site**

**Content**

Content:

- Introduction to the finite element analysis (FEA)
- Stress and modal analysis of finite element models using Abaqus/CAE as a preprocessor and Abaqus solver
- Introduction to topology and shape optimization
- Creation and calculation of various optimization models with the Abaqus optimization package

The students are able to:

- name the purposes and limits of numerical simulation and optimization of the virtual product development.
- solve simple realistic tasks in the field of finite element analysis and structure optimization with industrial common software.
- evaluate and to question the results of a simulation.
- identify and improve the mistakes of a simulation or optimization.

Regular attendance: 31.5 h

Self-study: 88.5 h

Exam: 1h written

**Organizational issues**

Wir empfehlen den Workshop ab dem 5. Semester.

Anmeldung erforderlich. Weitere Informationen siehe IPEK-Homepage.

Anwesenheitspflicht

V

**CFD for Power Engineering**

2130910, SS 2025, 2 SWS, Language: English, [Open in study portal](#)

**Lecture (V)**  
**Blended (On-Site/Online)**

**Content****Contents:**

The course is aimed of giving the fundamental of Computational Fluid Dynamics (CFD) for energy technologies. Starting from the basic physical phenomena equations an overview on computational methods and turbulence modeling is given.

The course consists of both, a theoretical and a numerical component. The former will deal with the derivations and properties of the methods and models for CFD. The numerical part will make use of open source CFD computer program OpenFOAM to give a "hands on" insight into the simulation of turbulent flows. After completing the course you should be able to establish a connection between theory and CFD modeling and simulation for energy applications.

**Tentative Course Outline:**

The weekly coverage might change as it depends on the progress of the class.

**Content**

- 1 Introduction: What is Computational Fluid Dynamics?
- 2 Governing Equations
- 3 Numerical Methods: Introduction
- 4 Numerical Methods: Finite Volume
- 5 Numerical Methods: Solution of ordinary differential equations
- 6 Numerical Methods: Convergence and numerical stability
- 7 Turbulence and Turbulence Modelling
- 8 Reynolds Averaged Navier-Stokes Simulation Approach
- 9 Heat Transfer

**CFD Project:**

- Part of this class is performing CFD simulations of turbulent heat and mass transfer using open-source CFD software OpenFOAM
- After CFD analysis is completed students have to write a technical report
- Projects are to be performed individually or in teams of two but every student writes his own report
- The CFD analysis technical report is part of the final examination.

**Objectives:**

After completing the course students:

- are able to understand fundamentals of non-linear partial differential equations
- will get working knowledge of computational techniques that can be used for solving engineering heat and mass transfer problems
- are able to understand fundamentals of statistical fluid mechanics and to derive RANS transport equations
- have learned how to computationally solve turbulent heat and mass transfer problems using OpenFOAM software
- are able to present their results in form of technical report.

ST 2025	2138341	<a href="#">Cognitive Automobiles - Laboratory</a>	3 SWS	/	Stiller, Lauer, Blumberg

Legend: Online, Blended (On-Site/Online), On-Site, Cancelled

**Competence Certificate**

oral exam  
30 minutes

**Prerequisites**

none

**Annotation**

The number of participants is limited. A registration is mandatory, the details are announced on the webpages of the institute of measurement and control systems (mrt). In case of too many interested students a subset will be selected (see website).

**Workload**

180 hours

*Below you will find excerpts from events related to this course:*

**Cognitive Automobiles - Laboratory**

2138341, SS 2025, 3 SWS, Language: German, [Open in study portal](#)

**On-Site**

**Content****Lehrinhalt (EN):**

1. Lane recognition
2. Object detection
3. Vehicle lateral control
4. Vehicle longitudinal control
5. Collision avoidance

**Lernziele (EN):**

The laboratory accompanies the lectures "Automotive Vision" and "Behaviour Generation for Vehicles". It will provide the opportunity of turning theoretical skills taught in the lecture to practice. The laboratory is divided into four groups with a maximum number of five students in each group. During the lessons you will be supervised by scientific staff.

The lecture addresses students in mechanical engineering and related subjects who intend to get an interdisciplinary knowledge in a state-of-the-art technical domain. Machine vision, vehicle kinematics and advanced information processing techniques are presented to provide a broad overview on "seeing vehicles". Each group is given the task to extract lane markings from video images and generate a suitable trajectory which the vehicle should follow. Apart from technical aspects in a highly innovative field of automotive technology, participants have the opportunity of gathering important qualifications as i.e. implementation skills, acquisition and comprehension of suitable literature, project and team work.

**Nachweis:** Colloquia, final race

V

**Combined Cycle Power Plants**

2170490, SS 2025, 2 SWS, Language: English, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

The training objective of the course is the qualification for a research-related professional activity in power plant engineering. The participants can name the most important components of the combined cycle power plant and describe their function. They can design or modify combined cycle power plants independently and creatively. They have acquired a broad knowledge of this power plant technology, including specific knowledge of gas turbine design, steam turbine design and boiler design. On this basis, they can describe and analyze the specific behavior of the power plant components as well as the entire power plant in the grid. Participants in the lecture have a trained analytical thinking and judgment in power plant design.

Layout of a combined cycle power plant, design and operation of gas turbines, of the heat recovery steam generator, of the feedwater system and cooling systems. Design and operation of steam turbines, of the generator and its electrical systems. System response to challenging grids, protection systems, water make-up and water chemistry. Design concepts of different power plant manufacturers, innovative power plant concepts.

## Composite Manufacturing – Polymers, Fibers, Semi-Finished Products, Manufacturing Technologies

2114053, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

**Content**Physical connections of fiber reinforcementUse and examples

- Automotive construction
- Transport
- Energy and construction
- Sport and recreation

Resins

- Thermoplastics
- Duromeres

Mechanisms of reinforcements

- Glas fibers
- Carbon fibers
- Aramid fibers
- Natural fibers

Semi-finished products - textilesProcess technologies - prepregsRecycling of composites**Aim of this lecture:**

Students know different polymer resin materials and fiber materials and can deduce their character and use.

They understand the reinforcing effect of fibers in a matrix surrounding as well as the tasks of the single components in a compound. They know about the influence of the length of fibers, their mechanical characters and performance in a polymer matrix compound.

Student know the important industrial production processes for continuous and discontinuous reinforced polymer matrix compounds.

**Lecture (V)  
Online**

**Content**

This course serves as an introduction into the computational modelling and simulation of technical system road/ vehicle. A method based perspective is taken which allows for a unified treatment of various kinds of vehicles. The vehicle model is obtained by dividing the system into functional subsystems and defining interfaces between these subsystems.

In the first part of the course, vehicle models will be developed based on models of the suspensions, the road, and the contact forces between road and vehicle. The focus of the second part of the course is on computational methods for linear and non-linear models of vehicle systems. The third part of the course discusses design criteria for stability, safety and ride comfort. Multibody dynamics simulations will be carried out using Matlab/ Simulink.

1. Introduction
2. Models of load bearing systems
3. Contact forces between wheels and roadway
4. Simulation of roadways
5. Vehicle models
6. Methods of calculation
7. Performance indicators

## Computational Vehicle Dynamics

2162256, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

### Content

This course serves as an introduction into the computational modelling and simulation of the road/ vehicle system. A method based perspective is taken which allows for a unified treatment of various kinds of vehicles. The vehicle model is obtained by dividing the system into functional subsystems and defining interfaces between these subsystems.

In the first part of the course, vehicle models will be developed based on models of the suspensions, the road, and the contact forces between road and vehicle. The focus of the second part of the course is on computational methods for linear and non-linear models of vehicle systems. The third part of the course discusses design criteria for stability, safety and ride comfort.

1. Introduction
2. Models of load bearing systems
3. Contact forces between wheels and roadway
4. Simulation of roadways
5. Vehicle models
6. Methods of calculation
7. Performance indicators

## Constitution and Properties of Protective Coatings

2177601, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

### Content

oral examination (about 30 min); no tools or reference materials

Teaching Content:

introduction and overview

concepts of surface modification

coating concepts

coating materials

methods of surface modification

coating methods

characterization methods

state of the art of industrial coating of tools and components

new developments of coating technology

regular attendance: 22 hours

self-study: 98 hours

Transfer of the basic knowledge of surface engineering, of the relations between constitution, properties and performance, of the manifold methods of modification, coating and characterization of surfaces.

Recommendations: none

**Organizational issues**

Falls die Vorlesung online stattfinden muss, bitte um Anmeldung unter [sven.ulrich@kit.edu](mailto:sven.ulrich@kit.edu) bis zum 22.10.24.

Den entsprechenden MS Teams Link erhalten Sie dann per E-Mail am 23.10.24.

## Constitution and Properties of Wear resistant materials

2194643, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

**Content**

The assessment consists of an oral exam (ca. 30 min) taking place at the agreed date (according to Section 4(2), 2 of the examination regulation). The re-examination is offered upon agreement.

Teaching Content:

introduction

materials and wear

unalloyed and alloyed tool steels

high speed steels

stellites and hard alloys

hard materials

hard metals

ceramic tool materials

superhard materials

new developments

regular attendance: 22 hours

self-study: 98 hours

Basic understanding of constitution of wear-resistant materials, of the relations between constitution, properties and performance, of principles of increasing of hardness and toughness of materials as well as of the characteristics of the various groups of wear-resistant materials.

Recommendations: none

**Organizational issues**

Die Blockveranstaltung findet in folgendem Zeitraum statt:

11.06.-13.06.2025: jeweils von 8:00-17:15 Uhr;

Ort: KIT-CN, Geb. 681, Raum 214

Anmeldung verbindlich bis zum 04.06.2025 unter [svен.ulrich@kit.edu](mailto:svен.ulrich@kit.edu).

Nach der Anmeldung wird Ihnen im Falle einer Online-Veranstaltung der Link zur Vorlesung per E-Mail am 10.06.2025 mitgeteilt.

V

**Contact Mechanics**

2181220, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

The course introduces contact mechanics of smooth and rough surface for non-adhesive and adhesive interfacial conditions. There will a computer lab held in parallel to the lecture that teaches numerical approaches to contact mechanical problems.

1. Introduction: contact area and stiffness
2. Theory of the elastic half-space
3. Contact of nonadhesive spheres: Hertz theory
4. Physics and chemistry of adhesive interactions at interfaces
5. Contact of adhesive spheres: theories of Johnson-Kendall-Roberts, Derjaguin-Muller-Toporov and Maugis-Dugdale
6. Surface roughness: topography, power spectral density, structure of real surfaces, fractal surfaces as a model, metrology
7. Contact of nonadhesive rough surfaces: theories of Greenwood-Williamson, Persson, Hyun-Pei-Robbins-Molinari
8. Contact of adhesive rough surface: theories of Fuller-Tabor, Persson and recent numerical results
9. Contact of rough spheres: theory of Greenwood-Tripp and recent numerical results
10. Lateral and sliding contact: theories of Cattaneo-Mindlin, Savkoor, Persson
11. Applications of contact mechanics

**The student**

- knows models for smooth and rough surfaces under non-adhesive and adhesive conditions and understands their strengths and limits
- knows fundamental scaling relations for the functional dependency between contact area, stiffness and normal force
- can apply numerical methods to study questions from materials science

preliminary knowledge in mathematics, physics and materials science recommended

regular attendance: 22,5 hours

self-study: 97,5 hours

oral exam ca. 30 minutes

V

**Control Technology**

2150683, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

The lecture control technology gives an integral overview of available control components within the field of industrial production systems.

The first part of the lecture deals with the fundamentals of signal processing and with control peripherals in the form of sensors and actors which are used in production systems for the detection and manipulation of process states.

The second part handles with the function of electric control systems in the production environment. The main focus in this chapter is laid on programmable logic controls, computerized numerical controls and robot controls. Finally the course ends with the topic of cross-linking and decentralization with the help of bus systems.

The lecture is very practice-oriented and illustrated with numerous examples from different branches.

The following topics will be covered:

- Signal processing
- Control peripherals
- Programmable logic controls
- Numerical controls
- Controls for industrial robots
- Distributed control systems
- Field bus
- Trends in the area of control technology

**Learning Outcomes:**

The students ...

- are able to name the electrical controls which occur in the industrial environment and explain their function.
- can explain fundamental methods of signal processing. This involves in particular several coding methods, error protection methods and analog to digital conversion.
- are able to choose and to dimension control components, including sensors and actors, for an industrial application, particularly in the field of plant engineering and machine tools. Thereby, they can consider both, technical and economical issues.
- can describe the approach for projecting and writing software programs for a programmable logic control named Simatic S7 from Siemens. Thereby they can name several programming languages of the IEC 1131.

**Workload:**

regular attendance: 21 hours

self-study: 99 hours

**Organizational issues**

Zur Vertiefung des im Rahmen der Lehrveranstaltung erworbenen Wissens werden die theoretischen Vorlesungseinheiten durch Praxiseinheiten im Umfeld der Karlsruher Forschungsfabrik (<https://www.karlsruher-forschungsfabrik.de>) unterstützt.

The theoretical lectures are complemented by practical lectures in the Karlsruhe Research Factory (<https://www.karlsruher-forschungsfabrik.de/en.html>) to deepen the acquired knowledge.

**Data Analytics for Engineers**

2106014, SS 2025, 3 SWS, Language: German, [Open in study portal](#)

Lecture / Practice (VÜ)  
Blended (On-Site/Online)

**Content****Content:**

- Introduction and motivation
- Terms and definitions (types of multidimensional features - time series and images, problem classes)
- Scenario: Problem formulation, feature extraction, evaluation, selection and transformation, distance measures, Bayes classifiers, Support-Vector-Machines, decision trees, clustering, regression, validation
- Biweekly computer exercises (Software practice with SciXMiner and Python): Data import, benchmark datasets, control of hand prostheses, energy prediction
- 2 hours per week lectures, 1 hour per week computer training

**Learning objectives:**

The students are able to apply the methods of data analysis efficiently. They know the basic mathematical data mining foundations for the analysis of single features and time series using classifiers, clustering and regression approaches. They are able to use various relevant methods as Bayes classifiers, Support Vector Machines, decision trees, fuzzy rulebases and they can adapt application scenarios (with data preprocessing and validation techniques) to real-world applications.

**Workload**

90 hours

*Below you will find excerpts from events related to this course:*

V

**Data Science and Scientific Workflows**

2182741, SS 2025, 3 SWS, Language: German, [Open in study portal](#)

**Lecture / Practice (VÜ)  
On-Site**

**Content**

The amount of data generated in scientific projects is increasing rapidly. The increase is partly due to the fact that new data-based evaluation methods allow a better and more precise analysis of scientific data. In addition, the linking of data provides new insights. This requires a systematic organization of data. The necessary knowledge of data science and computer science is equally required for both computer simulations and experimental investigations. The preparation/classification (e.g. electronic laboratory notebook) and structuring of data is a necessary step for their reuse. The lecture introduces the principles and software tools for the corresponding scientific workflows: Python and libraries, Jupyter notebook, shell scripts and documentation with git-tools. Furthermore, an overview is given of database systems in materials research and the FAIR data principle (findability, accessibility, interoperability and reusability).

**Objective:****Students will be able to**

- organize and document data electronically
- handle data formats: simple, hierarchical ones
- deal with software management tools (git, gitlab)
- record scientific workflows in detail and ensure traceability
- use python-based libraries for data handling and analyses

**Detailed lecture content:**

1. Introduction: the need for data science and computer science basics.
2. Programming and programming paradigms using Python
3. Software and data management: local and central management (git, gitlab)
4. Automating tasks: from scripts to workflow (with many examples from simulation and experiment)
5. Data processing
6. Electronic lab book
7. Data management requirements for publicly funded projects

**Exercise:**

The lecture material will be deepened in the exercises (exercise 1SWS).

**Mode of examination:**

- Project: Project topics from the areas
  - Material simulation and workflow
  - Data organization and analysis: from experiment or simulation
  - Presentation of the project in a 15 minute lecture + questions
- Preliminary examination performance: successful start to project work

**Literature****Literatur:**

- Handbuch Data Science, Hanser Verlag
- Effective Computation in Physics, Scopatz & Huff, O'Reilly 2015

**Data Science and Scientific Workflows**

2182741, SS 2025, 3 SWS, Language: German, [Open in study portal](#)

Lecture / Practice (VÜ)  
On-Site

**Content**

The amount of data generated in scientific projects is increasing rapidly. The increase is partly due to the fact that new data-based evaluation methods allow a better and more precise analysis of scientific data. In addition, the linking of data provides new insights. This requires a systematic organization of data. The necessary knowledge of data science and computer science is equally required for both computer simulations and experimental investigations. The preparation/classification (e.g. electronic laboratory notebook) and structuring of data is a necessary step for their reuse. The lecture introduces the principles and software tools for the corresponding scientific workflows: Python and libraries, Jupyter notebook, shell scripts and documentation with git-tools. Furthermore, an overview is given of database systems in materials research and the FAIR data principle (findability, accessibility, interoperability and reusability).

**Objective:****Students will be able to**

- organize and document data electronically
- handle data formats: simple, hierarchical ones
- deal with software management tools (git, gitlab)
- record scientific workflows in detail and ensure traceability
- use python-based libraries for data handling and analyses

**Detailed lecture content:**

1. Introduction: the need for data science and computer science basics.
2. Programming and programming paradigms using Python
3. Software and data management: local and central management (git, gitlab)
4. Automating tasks: from scripts to workflow (with many examples from simulation and experiment)
5. Data processing
6. Electronic lab book
7. Data management requirements for publicly funded projects

**Exercise:**

The lecture material will be deepened in the exercises (exercise 1SWS).

**Mode of examination:**

- Project: Project topics from the areas
  - Material simulation and workflow
  - Data organization and analysis: from experiment or simulation
  - Presentation of the project in a 15 minute lecture + questions
- Preliminary examination performance: successful start to project work

**Data-Driven Algorithms in Vehicle Technology**2113840, WS 24/25, 2 SWS, Language: English, [Open in study portal](#)Lecture (V)  
Blended (On-Site/Online)**Content**

Course Syllabus: Data-Driven Algorithms in Vehicle Technology

Motivation for the Course: Nowadays, engineers often develop technical systems using a combination of hard- and software. This is true especially for modern passenger vehicle development. In a digitalized world, such developments are built on knowledge gained from relevant data sources, e.g. the vehicle sensors. Therefore, engineers in automobile technology need qualifications from data science to successfully create new functionalities in the cars. To prevent remaining purely theoretical, the algorithms in this course are explained using a real-world problem of "EV Routing". Students have the opportunity to test methods in Python with frequent exercises presented.

Goal of the Course: Students have a basic understanding of data-driven algorithms such as Markov Models, Machine Learning or Monte-Carlo Methods. The approach for building data-driven models in automobile technology are known to students and they are able to test algorithms in the programming language "Python". Furthermore, students have learnt how to analyse the algorithm performance.

Content:

1. Introduction to function development as well as the prerequisites for the course (e.g. Fundamentals for running Python code)
2. Fundamentals for EV Routing and relevant data sources
3. Parameter estimation and state classification algorithms to determine the current situation of the vehicle
4. Learning methods for driver behaviour
5. Forecast algorithms to predict future energy consumption of an electric vehicle

### Decision-Making and Motion Planning for Automated Driving

2137401, WS 24/25, 3 SWS, Language: English, [Open in study portal](#)

Lecture (V)  
Blended (On-Site/Online)

**Content****Kurzfassung (EN):**

Driver assistance is on its way to evolve from pure driving dynamics control systems, such as ABS or ESP, to full automation. To realize new, customer-value safety and comfort systems, the primary task of active driving interventions in steering, accelerator and braking is shifting from the so-called vehicle stabilization level to the so-called vehicle guidance level, the new subject area of modern assistance systems. The challenge here is to provide optimum support for the driver without patronizing him. The next step is driving automation, in which the driving task is completely taken over, at least in certain situations. For highly and fully automated vehicles, the challenge is to produce pleasant, safe and predictable driving behavior under given uncertainties in the perception of the environment and the behavior of other road users.

**Lernziele (EN):**

The lecture is aimed at students of mechanical engineering and related courses who wish to acquire interdisciplinary qualifications in a future-oriented subject area. It covers control engineering, information technology and vehicle technology aspects and provides a holistic overview of the field of automated vehicle control. Practical application examples from innovative driver assistance and driving automation systems deepen and illustrate the lecture content.

**Contents:***Part 1: Driver Assistance:*

- 1) Introduction to driver assistance
- 2) System description and modeling
- 3) Assistance systems of the stabilization level
- 4) Assistance systems of the command level

*Part 2: Driving Automation:*

- 5) Introduction Maneuver Planning
- 6) Dynamic Programming
- 7) Linear-quadratic optimization problems
- 8) Model predictive control
- 9) Decision making under uncertainty (MDPs, reinforcement learning, imitation learning).

**Prerequisites:**

Basic knowledge of control engineering and systems theory should be available from "Measurement and Control Systems" or from lectures of other departments.

Legend: 📺 Online, 🔄 Blended (On-Site/Online), 🗣️ On-Site, ✖ Canceled

### Competence Certificate

The assessment consists of an oral exam (20 min) taking place in the recess period. The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

A registration is mandatory, the details will be announced on the webpages of the *Institute of Vehicle System Technology / Institute of Mobile Machines*. In case of too many applications, attendance will be granted based on pre-qualification.

The course will be replenished by interesting lectures of professionals from leading hydraulic companies.

### Prerequisites

Required for the participation in the examination is the preparation of a report during the semester. T-MACH-108887 must have been passed.

### Modeled Conditions

The following conditions have to be fulfilled:

1. The course [T-MACH-108887 - Design and Development of Mobile Machines - Advance](#) must have been passed.

### Recommendation

Knowledge in Fluid Power Systems

### Annotation

After completion of the lecture, students can:

- design working and travel drive train hydraulics of mobile machines and can derive characteristic key factors.
- choose and apply suitable state of the art designing methods successfully
- analyse a mobile machines and break its structure down from a complex system to subsystems with reduced complexity
- identify and describe interactions and links between subsystems of a mobile machine
- present and document solutions of a technical problem according to R&D standards

The number of participants is limited.

### Content:

The working scenario of a mobile machine depends strongly on the machine itself. Highly specialised machines, e.g. pavers are also as common as universal machines with a wide range of applications, e.g. hydraulic excavators. In general, all mobile machines are required to do their intended work in an optimal way and satisfy various criteria at the same time. This makes designing mobile machines to a great and interesting challenge. Nevertheless, usually key factors can be derived for every mobile machine, which affect all other machine parameters. During this lecture, those key factors and designing mobile machines accordingly will be addressed. To do so, an exemplary mobile machine will be discussed and designed in the lecture as a semester project.

### Literature:

**Workload**

120 hours

Below you will find excerpts from events related to this course:

V

**Design and Development of Mobile Machines**2113079, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)**Lecture (V)  
On-Site****Content**

Wheel loaders and excavators are highly specialized mobile machines. Their function is to detach, pick up and deposit materials near by. Significant size for dimensioning of the machines is the content of their standard shovel. In this lecture the main steps in dimensioning a wheel loader or excavator are being thought. This includes among others:

- Defining the size and dimensions,
- the dimensioning of the electric drive train,
- the dimensioning of the primary energy supply,
- Determining the kinematics of the equipment,
- the dimension of the working hydraulics and
- Calculations of strength

The entire design process of these machines is strongly influenced by the use of standards and guidelines (ISO/DIN-EN). Even this aspect is dealt with.

The lecture is based on the knowledge from the fields of mechanics, strength of materials, machine elements, propulsion and fluid technique. The lecture requires active participation and continued collaboration.

**Recommendations:**

Knowledge in Fluid Technology (SoSe, LV 21093)

- regular attendance: 21 hours
- self-study: 99 hours

**On-Site**  
 2145200, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

### Content

Within the interactive lecture "Design of fuel cell systems" knowledge, methods and procedures are taught on how fuel cell systems for various applications have to be designed. Starting from the general principles of electrochemical converters the design of the fuel cell and the system components with respect to dimension, geometry and material are discussed. Especially, the lecture will focus on the PEM fuel cell which is highly relevant for mobile applications such as trucks, ships or airplanes. Due to the industry experience of the lecturer in the automotive sector the design of the different components of the fuel cell system can be explained by present use cases.

The students have the opportunity within the lecture to design a complete fuel cell system for a specific application on their own. Starting from the dimensions of a single cell the fuel cell stack and the complete fuel cell system will be designed with respect to the power demand of the application. The relevant criteria power density, efficiency, lifetime and costs will be considered for the design. In detail, the single subsystems such as the hydrogen path, the air path and the cooling system as well as its single components will be engineered. Additionally, hybrid concepts of fuel cell and battery as well as operating strategies for different drive systems with respect to the application will be discussed.

The presented topics are as follows:

- Layout of a fuel cell drive system, hybridization of battery and fuel cell
- Layout of fuel cell systems (fuel cell and system components)
- Design of fuel cells with respect to medium flow, heat transport and electrical conduction
- Measurement techniques to analyze fuel cells and control of system components
- Layout and design of fuel cell components and related manufacturing techniques
- Design of fuel cell systems with respect to power and efficiency
- Degradation of fuel cell components and their influence on lifetime of the fuel cell system

### Learning objectives:

The students...

- can differentiate between various system topologies of drive trains and fuel cell systems as well as assign it to possible applications
- can name the function of the system components and can relate their influence on the overall design of the fuel cell system
- can illustrate the layout of a PEM fuel cell and alternative fuel cell types and can relate and name the function of the different components
- can design the fuel cell size and geometry with respect to electric power, heat dissipation and mass flow qualitatively and quantitatively

**Design of highly stressed components**

2181745, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
On-Site

**Content**

Contents of the lecture:

rules of common design codes

classical models for elasto-plasticity and creep

lifetime rules for creep, fatigue and creep-fatigue interaction

unified constitutive models for thermo-elasto-viscoplasticity

continuum mechanical models for damage at high temperatures

application of advanced material models in FE-codes

The students know about the rules of established design codes for the assessment of components which under operation are subjected to high thermo-mechanical and/or irradiation loadings. They understand which constitutive equations are used according to state-of-the-art of technology and research to estimate deformation and damage appearing under these loadings and to predict expected lifetime. They gained insight into the application of these generally non-linear constitutive equations in finite element codes and can judge the major issues which shall be thereby taken into account.

**Design with Plastics**

2174571, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Block (B)**  
**On-Site**

**Content**

Structure and properties of plastics materials,  
Processing of plastics,  
Behavior of plastics under environmental impacts,  
Classic strength dimensioning,  
Geometric dimensioning,  
Plastic appropriate design,  
Failure examples,  
Joining of plastic parts,  
Supporting simulation tools,  
Structural foams,  
Plastics Technology trends.

**learning objectives:**

Students will be able to

- distinguish polymer compounds from other construction materials regarding chemical differences, thermal behavior and solid conditions.
- discuss main plastics processes regarding advantages and disadvantages of materials selection and part geometry design and to make appropriate selections.
- analyze complex application requirements concerning material impacts on strength and to use the classic dimensioning method specific to the application to evaluate the lifetime part strength limit.
- evaluate part tolerances and geometry by appropriate methods considering molding shrinkage, production tolerances, post shrinkage, heat expansion, swelling, elastic and creep deformation.
- design plastic specific joining geometries like snap fits, screw bosses, weld seams and film hinges.
- detect classic molding failures and understand potential causes as well as to reduce the probability of molding failures by defining an optimized design.
- understand benefits and limits of selected simulation tools in the plastic technology discipline (strength, deformation, filling, warpage).
- assess polymer classes and plastic part designs with respect to suitable recycling concepts and ecological consequences.

**requirements:**

none,

recommendation: Polymerengineering I

**workload:**

The workload for the lecture Design with Plastics is 120 h per semester and consists of the presence during the lecture (21 h) as well as preparation and rework time at home (99 h).

### Designing with numerical methods in product development

2161229, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

### Content

Overview of the numeric process: finite difference methods, finite volume methods. Finite element methods. Boundary element method (BEM). Thermodynamic processes. Flow dynamic processes. Solid dynamics. Non-linear field behaviour. These methods are summarised at the end of the course, and a holistic concept for design processes is developed.

### Content

The bloc course offered by the Chair of Mobile Machines (Mobima) conveys the basics of planning and development of mobile and industrial hydrostatic systems. The lecturer works for a market leading company producing fluid power drives and controls and gives a deep view into the process of planning and development using real life examples. The contents of the course are:

- marketing, project planning
- hydrostatic circuits
- heat balance, hydraulic accumulators
- filtration, noise lowering
- development exercises + laboratory tutorial

knowledge in the fluidics

- regular attendance: 19 hours
- self-study: 90 hours

**Digital Control**2137309, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)Lecture (V)  
On-Site**Content****Lehrinhalt (EN):**

1. Introduction into digital control:  
Motivation for digital implementation of controllers Structure of digital feedback control loops Sample and hold units
2. State space analysis and design:  
Discretisation of continuous-time systems Discrete-time state space equations Stability - definition and criteria State feedback design by eigenvalue assignment PI state feedback controller Luenberger observer, separation theorem Systems with dead-time Deadbeat design
3. Analysis and design based on z-transform: z-transform - definition and theorems Control loop description in the z domain Stability criteria Root locus controller design Transfer of continuous-time controllers into discrete-time controllers

**Voraussetzungen (EN):**

Basic studies and preliminary examination; basic lectures in automatic control

**Lernziele (EN):**

The lecture introduces key methods for the analysis and design of digital feedback control systems. Starting point is the discretisation of linear, continuous-time models. State space based and z-transform based controller design techniques are presented for discrete-time, single-input single-output systems. Furthermore, plants with dead-time and deadbeat design are covered.

**Competence Certificate**

oral exam (approx. 30 min)

The exam is offered in German only!

**Recommendation**

- Previous knowledge of work and production systems as well as industrial engineering recommended
- Knowledge of labor and economics advantageous

**Annotation**

The course is capacity-limited, therefore the allocation of places is based on § 5 para. 4 in the module handbook: **Registration and admission to module examinations and courses** . This results in the following selection criteria:

- Students of the degree program have priority over students from outside the degree program
- Among students within the degree program, a decision may be made based on academic progress (not just with subject semesters)
- In the case of equal academic progress according to waiting time
- In the case of equal waiting time by lot

The exact procedure is explained on **ILIAS**.

"Successful participation requires active and continuous participation in the course."

**Workload**

120 hours

V

**Digital Transformation of Industrial Companies**

2109050, WS 24/25, 3 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

**Content****Learning objectives:**

The ongoing digital Transformation fundamentally changes the conditions and the environment of the industry worldwide. Industrial companies are facing massive socio-technical challenges with the target shaping and implementing the digital Transformation considering individual, holistic, practical and economic aspects. In this course the students especially learn:

Basic knowledge regarding Industrial Engineering, economic design of modern work- and production-systems, applicable Industry 4.0 technologies and their corresponding chances and challenges in a modern work environment (brown- & greenfield)

Keen knowledge regarding industrial companies and their elementary business & process types as a base for a benefit orientated derivation of measures

Ability of maturity estimation for an industrial company, requirements derivation and identification of corresponding potentials for the digital Transformation

Ability of a holistic, individual and economic planning & implementation of the digital Transformation for industrial companies including necessary steps,, corresponding methods and guidelines, as well target measurement to ensure value contribution of implemented solutions (e.g. information technology)

**Content:**

Theoretical background and basics regarding Industrial Engineering, industrial history and existing structures of globally operating industrial companies

Digital Transformation of industrial companies and effects on the work environment

Analysis status quo of corresponding work- and production-systems of industrial companies

Planning of the digital Transformation

Implementation of the digital Transformation incl. Industry 4.0

Target measurement and conclusions in practice

**Organizational:**

Compulsory attendance in one week course

Limited number of participants. Registration in ILIAS

The slides and corresponding literature (e.g. ISBN 978-3-662-62822-5 ) can be downloaded in ILIAS

The corresponding workload of the course is 120 hours (= 4 ECTS)

Type of examination: oral test (about 30 minutes)

**Organizational issues**

Prüfung am 20.01.2025

**Digital Transformation of Industrial Companies**

2109050, SS 2025, 2 SWS, Language: English, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content****Learning objectives:**

As digital transformation progresses, the world and corresponding framework and industrial environment are fundamentally changing. Industrial companies face significant socio-technical challenges to design and implement the dual transformation in a digital, holistic, practical, sustainable, and economical manner.

In this lecture, students will learn:

- **Industrial Engineering Basics:** Understanding the economic design of modern work and production systems, and the technologies used in Industry 4.0 and 5.0, including their opportunities and challenges.
- **Types of Industrial Enterprises:** Understanding fundamental industrial business and process types to derive value-oriented measures.
- **Environment of Industry in today's times:** Understanding how business and work environment changes (e.g. BANI).
- **Management Approaches:** Applying different management approaches to achieve digital and circular production.
- **Maturity Level Assessment:** Determining a company's maturity level, deriving requirements, and identifying potentials for digital and circular transformation.
- **Holistic Planning and Implementation:** Planning and implementing transformation in industrial enterprises holistically and economically, including necessary steps, methods, and guidelines.
- **Up- and Reskilling:** Developing strategies for continuous learning and target-oriented skill development to adapt organizations to new technologies and processes.
- **Case Studies:** Possibility to deep dive in real industrial case studies learning to identify, plan and execute success oriented measures in a industrial company.

**Content:****ORGANIZATION:**

- **Fundamentals of Industrial Engineering:** Structure and history of industrial enterprises in a global context.
- **Status Quo Analysis:** Analyzing current work and production systems.
- **Strategic Planning:** Aligning digital and sustainability goals with business strategy.
- **Process Optimization:** Streamlining processes for efficiency and sustainability.
- **Project Management:** Applying classical and agile methodologies for transformation projects.

**TECHNOLOGY:**

- **Digital Transformation:** Impact on the workplace.
- **Digital Tools and Systems:** Implementing AI, IoT, and smart systems.
- **Data Analytics:** Leveraging data for informed decision-making.
- **Implementing Digital Transformation:** Steps to implement Industry 4.0 and 5.0.
- **Sustainability and Circular Economy:** Integrating sustainability into industrial transformation.

**HUMAN:**

- **Up- and Reskilling:** Target-oriented learning and adaptive skill development.
- **Change Management:** Engaging employees in the transformation process.
- **Leadership:** Developing leaders who can drive digital and sustainable transformation.

**Organizational:**

- Mandatory attendance in the introductory lecture and block lecture (one week full-time).
- Lecture slides and a reading list are available for download on ILIAS.
- The lecture has a workload of 120 hours (= 4 ECTS credits).
- **Examination type:** Oral test (approximately 20 minutes).

### Digitalization from Product Concept to Production

2149702, WS 24/25, 2 SWS, Language: English, [Open in study portal](#)

Lecture (V)  
On-Site

**Content**

The lecture deals with Digitalization along the entire value chain end-to-end, with a focus on production and supply chain. Within this context, concepts, tools, methods, technologies and concrete applications in the industry are presented. Furthermore, the students get the opportunity to get first-hand insights into the digitalization journey of a German technology company.

Main topics of the lecture:

- Concepts and methods such as disruptive innovation and agile project management
- Overview on technologies at disposal
- Practical approaches in innovation
- Applications in industry
- Field trip to ZEISS

**Learning Outcomes:**

The students ...

- are capable to comment on the content covered by the lecture.
- are able to analyze and evaluate the suitability of digitalization technologies in the optical industry.
- are able to assess the applicability of methods such as disruptive innovation and agile project management.
- are able to appreciate the practical challenges to digitalization in industry.

**Workload:**

regular attendance: 21 hours

self-study: 99 hours

**Organizational issues**

Aus organisatorischen Gründen ist die Teilnehmeranzahl für die Lehrveranstaltung begrenzt. Infolgedessen wird ein Auswahlprozess stattfinden. Weitere Informationen zur Bewerbung sind unter <https://www.wbk.kit.edu/studium-und-lehre.php> zu finden.

For organisational reasons, the number of participants for the course is limited. As a result, a selection process will take place. Further information for application can be found via:

### Drive System Engineering A: Automotive Systems

2146231, SS 2025, 3 SWS, Language: English, [Open in study portal](#)

Lecture / Practice (VÜ)  
On-Site

### Content

Students acquire the basic skills needed to develop future energy-efficient and at the same time comfortably drivable powertrains. This includes holistic development methods and evaluations of powertrain systems. The main topics can be divided into the following chapters:

- Powertrain System
- Driver System
- Environment System
- System Components
- Development Process

**Competence Certificate**

The final assessment will be an oral examination (20 min) taking place during the recess period. The examination will be offered in every semester and can be repeated at any regular examination date.

**Prerequisites**

none

**Recommendation**

- General principles of mechanicals engineering
- Basic knowledge of hydraulics
- Interest in mobile machinery

**Annotation**

At the end of the lecture, participants can explain the structure and function of all discussed drive trains of mobile machines. They can analyze complex gearbox schematics and synthesize simple transmission functions using rough calculations.

**Content:**

In this course the different drive trains of mobile machinery will be discussed. The focus of this course is:

- mechanical gears
- torque converter
- hydrostatic drives
- power split drives
- electrical drives
- hybrid drives
- axles
- terra mechanics

**Media:** projector presentation

**Literature:** Download of lecture slides from ILIAS. Further literature recommendations during lectures.

**Workload**

120 hours

Legend:  Online,  Blended (On-Site/Online),  On-Site,  Cancelled

### Competence Certificate

Presentation of performed project and defense (30min) according to §4 (2), No. 3 of the examination regulation

### Prerequisites

T-MACH-112113 (Dynamic Systems of Technical Logistics) must have been started.

### Modeled Conditions

The following conditions have to be fulfilled:

1. The course [T-MACH-112113 - Dynamic Systems of Technical Logistics](#) must have been started.

### Workload

120 hours

Below you will find excerpts from events related to this course:

V

## Dynamic Systems of Technical Logistics - Project

2148606, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Project (PRO)  
On-Site**

### Content

Conveyor technology = motion = dynamics

Course content:

The knowledge acquired in the lecture DSTL will be extended and deepened together with the previous knowledge from GTL I/II in the context of an independent project work based on an application case from the current research and project work at IFL. Analyses, research, design work, calculations and simulations are used.

### Organizational issues

DSTL und DSTL-P sind zeitlich so gegliedert, dass zunächst unter Hinzunahme des Mittwochs-Zeitslots für die Vorlesung ausschließlich der Vorlesungs- und Übungsteil bis ca. Ende Juni gehalten wird. Der anschließende Zeitraum ist ausschließlich für die (optionale) Projektarbeit vorgesehen.

**Competence Certificate**

The assessment is carried out as a written examination (§ 4 Abs. 2 No. 1 SPO) lasting 120 minutes.

**Prerequisites**

Basic studies in computer science

**Recommendation**

Knowledge of e.g. cognitive systems, software engineering, algorithms, computer networks &amp; structures, low-power design is helpful.

*Below you will find excerpts from events related to this course:***EdgeAI in Software and Sensor Applications**2400124, WS 24/25, 2 SWS, Language: English, [Open in study portal](#)**Lecture (V)**  
**Online****Content**

Just imagine a world, where every thing you touch is intelligent and ready to assist you. Where everyday devices learn with you autonomously all the time, augmenting your senses and providing immediate feedback for your decisions. EdgeAI is the next frontier in artificial intelligence that enables such capabilities in the smallest imaginable devices and sensors even when there is no cloud connectivity.

Edge Computing includes applications, data, services at the periphery of networks that are close to real-world sensors. Edge systems are typically constrained in their available energy budget, CPUs, memory, and connectivity. Fog computing further combines these aspects with cloud architectures in order to add enhanced local pre-processing and intelligence that extends the capabilities of classical clouds.

Modern sensor applications - for instance in industrial monitoring and logistics, Internet-of-Things, Ubiquitous Computing, mobile devices, wearables & hearables, health & fitness, drones, or augmented reality - increasingly rely on Edge and Fog Computing to better handle Big Data, always-on applications, continuous fusion of data streams, and new kinds of use cases that were unimaginable before.

In this context, Edge Artificial Intelligence methods (Edge-AI) become key to the realization of continuously learning systems that provide more autonomy and instant feedback. In contrast to mainstream AI, EdgeAI techniques have to cope with significant resource constraints and be fault-tolerant. This course therefore picks up on this exciting topic to provide an overview of state-of-the-art, further dive into current research works, show demonstrations, and discuss open problems.

**Energy and Indoor Climate Concepts**

1720970, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

The students will become familiar with concepts and technologies of energy-efficient building. Topics like heat protection, passive solar energy use, ventilation systems and passive cooling are addressed. New ways of renewable energy supply show the path towards climate-neutral buildings. On the basis of examples from practice, energy and indoor climate concepts for different buildings types are investigated in detail and analyzed with regard to presented performance criteria. For qualification targets see module handbook.

V

**Energy Storage and Grid Integration**

2189487, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

The lecture provides an overview of the different storage types and their fundamental integration into the power supply grid.

Thereby, within the scope of this lecture, the necessity and the motivation for converting and storing energy will be given. Starting from the definition of fundamental terms different physical and chemical storage types along with their theoretical and practical basis are described. In particular, the decoupling of energy production and energy consumption, and the provision of different energy scales (time, power, density) will be discussed. Furthermore, the challenge of energy transport and re-integration into the different grid types is considered.

Students understand the different types of energy storage and apply their knowledge for the selection and principal dimensioning of relevant energy storage tasks.

Furthermore, students can reflect the state-of-the-art of most important energy storage types, their fundamental characteristics and viability at given boundary conditions and they are enabled to elaborate and apply basic integration issues dependent on the grid structure for the different network types.

Oral exam, duration approximately 30 min, tools: none

**Energy Systems I - Renewable Energy**

2129901, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
On-Site

**Content**

The course deals with fundamental aspects of renewable energies.

1. The first part deals with the basic concepts of absorbing solar beams, in an efficient manner accounting for the minimization of heat losses. In this context, selective topics on thermodynamics as well as fluid dynamics are introduced. In the second part few applications are discussed and optimizations techniques of solar collectors construction and their heat transfer are presented.
2. The use of solar energy as a source for heat generation is followed by the idea of electricity generation. Introductory aspects of Photovoltaic technologies are illuminated.
3. The last part presents additional regenerative energy sources such as wind and geothermal energy.

The student knows the principles of the feasibility of energy gain by means of renewable energies, in particular the solar energy.

regular attendance: 30 hours

self-study: 90hours

**Energy Topology and Resilience**2153446, SS 2025, 2 SWS, Language: English, [Open in study portal](#)**Lecture (V)  
On-Site****Content**

The topic of energy security is becoming increasingly relevant in the context of the energy transition, especially against the backdrop of primary energy shortages, new vulnerabilities of smart and complex networked energy systems (cyber attacks), new threats (e.g., consequences of climate change).

Against the background of new risks and uncertainties, the question arises to what extent the design of cyber-physical systems such as smart grids can minimize systemic risks despite large uncertainties and which topological degrees of freedom play a special role for this.

After an introduction to resilience research, this lecture addresses current questions on the impact of utility grid design on supply security from a mathematical-physical perspective in the context of the energy transition and smart grids. With the addition of socio-economic constraints, solution approaches lead to hard optimization problems, since there are, e.g., many degrees of freedom in spatial-topological planning in addition to questions about the grid-intrinsic design. Resilience metrics are derived from an analytical understanding on systemic vulnerability and on systemic risks related to utility networks, which are then used in the formulation of optimization problems to identify resilient and techno-economically feasible utility networks.

Key topics:

- Resilient utility networks
- Topology: Degrees of Freedom
- Systemic risks: sys. Vulnerability
- Resilience metrics for networks and microgrid-based power systems
- Topological Optimization and Simulation: Optimization Problems and Solvers

V

**Tribology**

2181114, WS 24/25, 5 SWS, Language: German, [Open in study portal](#)

Lecture / Practice (VÜ)  
On-Site

## Content

- Chapter 1: Friction  
adhesion, geometrical and real area of contact, Friction experiments, friction powder, tribological stressing, environmental influences, tribological age, contact models, Simulation of contacts, roughness.
- Chapter 2: Wear  
plastic deformation at the asperity level, dissipation modes, mechanical mixing, Dynamics of the third body, running-in, running- in dynamics, shear stress.
- Chapter 3: Lubrication  
base oils, Stribeck plot, lubrication regimes (HD, EHD, mixed lubrication), additives, oil characterization, solid lubrication.
- Chapter 4: Measurement Techniques  
friction measurement, tribometer, dissipated frictional power, conventional wear measurement, continuous wear measurement(RNT)
- Chapter 5: Roughness  
profilometry, surface roughness parameters, evaluation length and filters, bearing ratio curve, measurement error
- Chapter 6: Accompanying Analysis  
multi-scale topography measurement, chemical surface analysis, structural analysis, mechanical analysis

Exercises are used for complementing and deepening the contents of the lecture as well as for answering more extensive questions raised by the students.

The student can

- describe the fundamental friction and wear mechanisms, which occur in tribologically stressed systems
- evaluate the friction and wear behavior of tribological systems
- explain the effects of lubricants and their most important additives
- identify suitable approaches to optimize tribological systems
- explain the most important experimental methods for the measurement of friction and wear, and is able to use them for the characterisation of tribo pairs
- choose suitable methods for the evaluation of roughness and topography from the nm-scale to the mm-scale and is able to interpret the determined values in respect to their effect on the tribological behavior
- describe the most important surface-analytical methods and their physical principles for the characterization of tribologically stressed sliding surfaces

preliminary knowlegde in mathematics, mechanics and materials science recommended

regular attendance: 45 hours

self-study: 195 hours

oral examination (ca. 40 min)

no tools or reference materials

admission to the exam only with successful completion of the exercises

V

**Applied Materials Simulation**

2182614, SS 2025, 4 SWS, Language: German, [Open in study portal](#)

Lecture / Practice (VÜ)  
Online

**Content**

This lecture should give the students an overview of different simulation methods in the field of materials science and engineering. Numerical methods are presented and their use in different fields of application and size scales shown and discussed. On the basis of theoretical as well as practical aspects, a critical examination of the opportunities and challenges of numerical material simulation shall be carried out.

The student can

- define different numerical methods and distinguish their range of application
- approach issues by applying the finite element method and discuss the processes and results
- understand complex processes of metal forming and crash simulation and discuss the structural and material behavior
- define and apply the physical fundamentals of particle-based simulation techniques to applications of materials science
- illustrate the range of application of atomistic simulation methods and distinguish between different models

preliminary knowlegde in mathematics, physics and materials science recommended

regular attendance: 34 hours

exercise: 11 hours

self-study: 165 hours

oral exam ca. 35 minutes

no tools or reference materials

admission to the exam only with successful completion of the exercises

## Exercises for Fundamentals in Materials Thermodynamics and Heterogeneous Equilibria

Practice (Ü)  
On-Site

2193005, WS 24/25, 1 SWS, Language: German, [Open in study portal](#)

### Content

- Ternary phase diagrams
  - Complete solubility
  - Eutectic systems
- Thermodynamics of solution phases
- Materials reactions involving pure condensed phases and a gaseous phase
- Reaction equilibria in systems containing components in condensed solutions

This exercise deals with the construction of isothermal sections and isopleths in ternary materials systems. The thermodynamic properties of multiphase engineering materials are calculated.

Recommendations:

- Lecture in Fundamentals in Materials Thermodynamics and Heterogeneous Equilibria
- Basic course in materials science and engineering
- physical chemistry

regular attendance: 14 hours

self-study: 46 hours

### Organizational issues

Die genauen Termine werden in der ersten Vorlesung (23.10.24) bekannt gegeben.

Die Übungen finden ab der zweiten Vorlesungswoche montags, 09:45-11:15 Uhr in Geb. 10.50, HS 102 statt.

**Literature**

## V

**Materials Characterization**

2174586, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

The following methods will be introduced within this lecture:

- microscopic methods: optical microscopy, electron microscopy (SEM/TEM), atomic force microscopy
- material and microstructure analyses by means of X-ray, neutron and electron beams
- analysis methods at SEM/TEM (e.g. EELS)
- spectroscopic methods (e.g. EDS / WDS)

**learning objectives:**

The students have fundamental knowledge about methods of material analysis. They have a basic understanding to transfer this fundamental knowledge on problems in engineering science. Furthermore, the students have the ability to describe technical material by its microscopic and submicroscopic structure.

**Experimental Fluid Mechanics**

2153530, WS 24/25, 2 SWS, Language: English, [Open in study portal](#)

**Lecture (V)**  
**Blended (On-Site/Online)**

**Content**

The students can describe the relevant physical principles of experimental fluid mechanics. They are qualified to comparatively discuss the introduced measurement techniques. Furthermore, they are able to distinguish (dis-)advantages of the respective approaches. The students can evaluate and discuss measurement signal and data obtained with the common fluid mechanical measuring techniques.

This lecture focuses on experimental methods of fluid mechanics and their application to solve flow problems of practical relevance. In addition, measurement signals and data, obtained with the discussed measuring techniques, are evaluated, presented and discussed.

The lecture covers a selection of the following topics:

- measuring techniques and measurable quantities
- measurements in turbulent flows
- pressure measurements
- hot wire measurements
- optical measuring techniques
- error analysis
- scaling laws
- signal and data evaluation

### Welding Lab Course, in groupes

2173560, WS 24/25, 3 SWS, Language: German, [Open in study portal](#)

**Practical course (P)  
On-Site**

### Content

The lab takes place at the beginning of the winter semester break once a year. The registration is possible during the lecture period in the secretariat of the Institute of Applied Materials (IAM – WK). The lab is carried out in the Handwerkskammer Karlsruhe.

**learning objectives:** The students are capable to name a survey of current welding processes and their suitability for joining different metals. The students can evaluate the advantages and disadvantages of the individual procedures. The students have weld with different welding processes.

### requirements:

You need sturdy shoes and long clothes!

### workload:

regular attendance: 31,5 hours

preparation: 8,5 hours

lab report: 80 hours

**Organizational issues**

Die Anmeldung erfolgt durch den Beitritt in den ILIAS-Kurs.

Die Lehrveranstaltung "Experimentelles schweißtechnisches Praktikum" findet dieses Jahr wieder in der Woche vom 03.-07. März 2025 statt. Der Veranstaltungsort ist die

Bildungsakademie Handwerkskammer Karlsruhe  
Hertzstr. 177  
76187 Karlsruhe

Die Gruppeneinteilung in die beiden Gruppen findet Anfang Februar statt!

- Gruppe 1. Montag 7.30 Uhr bis Mittwoch 12.00 Uhr
- Gruppe 2. Mittwoch 13.00 Uhr bis Freitag 15.00 Uhr

Sollte aufgrund anderer LV oder Prüfungen für Sie nur eine der beiden Gruppen in Frage kommen, melden Sie sich bitte rechtzeitig unter [iam-wk-lehre@iam.kit.edu](mailto:iam-wk-lehre@iam.kit.edu)

Bitte bringen Sie festes und geschlossenes Schuhwerk (optimalerweise Arbeitsschuhe) und lange und entbehrliche Hosen sowie Oberteile mit, da wir uns die Hände schmutzig machen und mit flüssigem, umherfliegendem Metall konfrontiert sein werden. Für die Mittagspause können Sie sich selbst versorgen oder auch in der Mensa der Bildungsakademie essen.

**Literature**

wird im Praktikum ausgegeben

### Fabrication Processes in Microsystem Technology

2143882, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

### Content

The lecture offers an advanced understanding of manufacturing processes in microsystem technology. Basic aspects of microtechnological processing will be introduced. With examples from semiconductor microfabrication and microsystem technology the base processing steps for conditioning and finishing, patterning, removal are imparted. Nano-patterning is covered is also included and the micro-nano interface is discussed. By the help of typical processing steps elementary mechanisms, process execution, and equipment are explained. Additionally quality control, process control and environmental topics are included

**Failure Analysis**

2182572, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

Aim, procedure and content of examining failure

Examination methods

Types of failure:

Failure due to mechanical loads

Failure due to corrosion in electrolytes

Failure due to thermal loads

Failure due to tribological loads

Damage systematics

The students are able to discuss damage evaluation and to perform damage investigations. They know the common necessary investigation

methods and can regard failures considering load and material resistance. Furthermore they can describe and discuss the most important types of failure and damage appearance.

basic knowledge in materials science (e.g. lecture materials science I and II) recommended

regular attendance: 21 hours

self-study: 99 hours

oral exam, duration: ca. 30 minutes

no notes

### Failure of structural materials: deformation and fracture

2181711, WS 24/25, 3 SWS, Language: German, [Open in study portal](#)

Lecture / Practice (VÜ)  
On-Site

## Content

1. Introduction
2. linear elasticity
3. classification of stresses
4. Failure due to plasticity
  - tensile test
  - dislocations
  - hardening mechanisms
  - guidelines for dimensioning
5. composite materials
6. fracture mechanics
  - hypotheses for failure
  - linear elastic fracture mechanics
  - crack resistance
  - experimental measurement of fracture toughness
  - defect measurement
  - crack propagation
  - application of fracture mechanics
  - atomistics of fracture

## The student

- has the basic understanding of mechanical processes to explain the relationship between externally applied load and materials strength.
- can explain the foundation of linear elastic fracture mechanics and is able to determine if this concept can be applied to a failure by fracture.
- can describe the main empirical materials models for deformation and fracture and can apply them.
- has the physical understanding to describe and explain phenomena of failure.

preliminary knowledge in mathematics, mechanics and materials science recommended

regular attendance: 22,5 hours

self-study: 97,5 hours

The assessment consists of an oral examination (ca. 30 min) according to Section 4(2), 2 of the examination regulation.

## Organizational issues

Übungstermine werden in der Vorlesung bekannt gegeben!

Die Veranstaltung wird letztmals im Wintersemester 2025/2026 angeboten!

## Literature

- Engineering Materials, M. Ashby and D.R. Jones (2nd Edition, Butterworth-Heinemann, Oxford, 1998); sehr lesenswert, relativ einfach aber dennoch umfassend, verständlich

### Failure of Structural Materials: Fatigue and Creep

2181715, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

**Content**

## 1 Fatigue

## 1.1 Introduction

## 1.2 Lifetime

## 1.3 Fatigue Mechanisms

## 1.4 Material Selection

## 1.5 Notches and Shape Optimization

## 1.6 Case Studies: ICE-Accidents

## 2 Creep

## 2.1 Introduction

## 2.2 High Temperature Plasticity

## 2.3 Phänomenological Description of Creep

## 2.4 Creep Mechanisms

## 2.5 Alloying Effects

## The student

- has the basic understanding of mechanical processes to explain the relationships between externally applied load and materials strength.
- can describe the main empirical materials models for fatigue and creep and can apply them.
- has the physical understanding to describe and explain phenomena of failure.
- can use statistical approaches for reliability predictions.
- can use its acquired skills, to select and develop materials for specific applications.

preliminary knowledge in mathematics, mechanics and materials science recommended

regular attendance: 22,5 hours

self-study: 97,5 hours

The assessment consists of an oral examination (ca. 30 min) according to Section 4(2), 2 of the examination regulation.

## V

**Fatigue of Materials**

2173586, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

- Introduction: historical review and some fatigue damage cases
- Cyclic Stress Strain Behaviour
- Crack Initiation
- Crack Propagation
- Lifetime Behaviour under Cyclic Loading
- Fatigue of Notched Components
- Structural Durability
- Fatigue of composites and compound materials

**learning objectives:**

The students are able to recognise the deformation and the failure behaviour of materials under cyclic loading and to assign it to the basic microstructural processes. They know the sequence and the development of fatigue damages and can evaluate the initiation and the growth of fatigue cracks.

The students can evaluate the cyclic strength behaviour of materials and components both qualitatively and quantitatively and know the procedures for the assessment of single-stage, multistage and stochastic cyclical loadings.

**requirements:**

none, basic knowledge in Material Science will be helpful

**workload:**

regular attendance: 21 hours

self-study: 99 hours

**Literature**

Ein Manuskript, das auch aktuelle Literaturhinweise enthält, wird in der Vorlesung verteilt.

V

**FEM Workshop -- constitutive laws**

2183716, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Block (B)  
On-Site**

**Content**

The course repeats the fundamentals of the theory of materials. It leads to the characterization and classification of material behavior as well as the specification by adequate material models. Here we focus on elastic, viscoelastic, plastic, and viscoplastic deformation behavior. Introducing the finite element program ABAQUS, the students learn how to analyze the material models numerically. Therefore ABAQUS-own and continuative constitutive equations are chosen.

The student

- has the basic understanding of the materials theory and the classification of materials
- is able to independently generate numerical models using ABAQUS and can choose and apply adequate constitutive equations

Engineering Mechanics; Advanced Mathematics; Introduction to Theory of Materials recommended

regular attendance: 28 hours

self-study: 92 hours

Oral examination (ca. 20 min) in the elective module MSc, otherwise no grading

solving of a FEM problem

**Practical course (P)  
On-Site**

**Content**

The following flow measurement techniques are considered:

- wind tunnel techniques and estimation of turbulence intensity
- hot wire calibration an measzrement
- pressure measurements in air (around bodies)
- pressure measurements in water (Nikuradse diagram)
- Schlieren techniques
- Mach-Zehnder interferometry
- laser Doppler anemometry
- particle image velocimetry
- uncertainty estimation

The students can apply various flow measurements. They are capable to obtain, (post-)process and analyze flow data. Furthermore, the students can contrast advantages and disadvantages of the respective experimental approaches.

regular attendance: 30 hours

self-study: 90 hours

**Organizational issues**

Im Wintersemester findet die Veranstaltung auf Englisch statt, im Sommersemester auf Deutsch.

The course will be held in English in the winter semester and in German in the summer semester

## V

**Flows and Heat Transfer in Energy Technology**

2189910, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
On-Site

**Content**

This lecture is dedicated to students of mechanical engineering and other engineering Bachelor or Master degree courses. Goal of the lecture is the understanding of major processes in fluid dynamics and heat transfer in energy engineering. Through this lecture the students are capable of understanding the important physical processes and the selection of suitable methods for the analysis of the processes. With the discussion of some practical examples, the students can analyze the pressure drop and heat transfer in energy engineering systems.

1. collection of sample applications
2. heat transfer and its application
3. convective fluid dynamics and heat transfer
4. thermal radiation and its application
5. special cases

2153406, WS 24/25, 2 SWS, Language: German/English, [Open in study portal](#)

**Lecture (V)**  
**Blended (On-Site/Online)**

**Content**

The students can describe flow scenarios, where a chemical reaction is confined to a thin layer. They can choose simplifying approaches for the underlying chemistry and discuss the problems with focus on the fluid mechanic aspects. The students are able to solve simple problems analytically. Furthermore, they are qualified to discuss simplifications as relevant for an efficient numerical solution of complex problems.

In the lecture we mainly consider problems, where chemical reaction is confined to a thin layer.

The problems are solved analytically or they are at least simplified allowing for efficient numerical

sollution procedures. We apply simplified chemistry and focus on the fluid mechanic aspects of the problems.

**Competence Certificate**

The assessment consists of a oral exam taking place in the recess period. The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

**Prerequisites**

none

**Annotation****Learning Objectives:**

The student is able to

- apply and evaluate the physical principles of fluid technology,
- name common components and explain how they work,
- demonstrate the advantages and disadvantages of different components,
- dimension components for a given purpose
- and to calculate simple systems.

**Contents:**

In the area of hydrostatics, the following topics are covered

- Pressurized fluids,
- pumps and motors,
- valves,
- accessories and hydraulic circuits.

In the field of pneumatics, the following topics are covered

- Compressors,
- drives,
- valves and control systems.

**Literature:**

Lecture notes for the fluid technology lecture, downloadable via the ILIAS learning platform.

**Workload**

120 hours

**Fluid-Structure-Interaction with Python**

2154453, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Blended (On-Site/Online)**

**Content**

„The lecture provides the basics for the description and modeling of flows, structures and their interaction. In the practical part, the covered methods and procedures are deepened with various exercises and examples with Python and Ansys Fluent.

- Brief introduction to Python and Ansys Fluent
- Basic equations of continuum mechanics
- Smoothing and remeshing algorithms for mesh deformation
- Finite volume and finite element method
- Methods of fluid-structure interaction
- coupling conditions
- Monolithic and partitioned coupling methods
- Coupling algorithms for partitioned methods
- Stability and convergence of coupled systems”

### Foundations of nonlinear continuum mechanics

2181720, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

### Content

The lecture is organized in three parts. In the first part, the mathematical foundations of tensor algebra and tensor analysis are introduced, usually in cartesian representation. In the second part of the lecture, the kinematics, i.e. the geometry of deformation is presented. Besides finite deformation, geometric linearization is discussed. The third part of the lecture deals with the physical balance laws of thermomechanics. It is shown, how a special classical theory of continuum mechanics can be derived by adding a corresponding constitutive model. For the illustration of the theory, elementary examples are discussed repeatedly.

The students understand the fundamental structure of a continuum theory consisting of kinematics, balance laws and constitutive model. In particular, they recognize non-linear continuum mechanics as a common structure including all continuum theories of thermomechanics, which are obtained by adding a corresponding constitutive model. The students understand in detail the kinematics of finite deformation and know the transition to the geometrically linear theory they are familiar with. The students know the spatial and material representation of the theory and the different related tensors. The students take the balance laws as physical postulates and understand their respective physical motivation.

Qualification: Engineering Mechanics - Advanced Mathematics

regular attendance: 22,5 hours

self-study: 97,5 hours

## Fundamentals for Design of Motor-Vehicles Bodies I

2113814, WS 24/25, 1 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

### Content

1. History and design
2. Aerodynamics
3. Design methods (CAD/CAM, FEM)
4. Manufacturing methods of body parts
5. Fastening technologie
6. Body in white / body production, body surface

Learning Objectives:

The students have an overview of the fundamental possibilities for design and manufacture of motor-vehicle bodies. They know the complete process, from the first idea, through the concept to the dimensioned drawings (e.g. with FE-methods). They have knowledge about the fundamentals and their correlations, to be able to analyze and to judge relating components as well as to develop them accordingly.

V

## Fundamentals for Design of Motor-Vehicles Bodies II

2114840, SS 2025, 1 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

### Content

1. Body properties/testing procedures
2. External body-parts
3. Interior trim
4. Compartment air conditioning
5. Electric and electronic features
6. Crash tests
7. Project management aspects, future prospects

Learning Objectives:

The students know that, often the design of seemingly simple detail components can result in the solution of complex problems. They have knowledge in testing procedures of body properties. They have an overview of body parts such as bumpers, window lift mechanism and seats. They understand, as well as, parallel to the normal electrical system, about the electronic side of a motor vehicle. Based on this they are ready to analyze and to judge the relation of these single components. They are also able to contribute competently to complex development tasks by imparted knowledge in project management.

Legend:  Online,  Blended (On-Site/Online),  On-Site,  Cancelled

### Competence Certificate

Oral examination (about 30 min)

### Prerequisites

The successful participation in Übungen zu Thermodynamische Grundlagen / Heterogene Gleichgewichte is the condition for the admittance to the oral exam in Thermodynamische Grundlagen / Heterogene Gleichgewicht.

T-MACH-110924 – Exercises for Fundamentals in Materials Thermodynamics and Heterogeneous Equilibria has not been started.

T-MACH-110925 – Fundamentals in Materials Thermodynamics and Heterogeneous Equilibria has not been started.

### Modeled Conditions

The following conditions have to be fulfilled:

1. The course [T-MACH-107669 - Exercises for Fundamentals in Materials Thermodynamics and Heterogeneous Equilibria](#) must have been passed.

### Recommendation

Basic course in materials science and engineering

Basic course in mathematics

physics or physical chemistry

### Workload

120 hours

Below you will find excerpts from events related to this course:

V

## Fundamentals in Materials Thermodynamics and Heterogeneous Equilibria

2193002, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

**Content**

Oral examination (about 30 min)

Teaching Content:

1. Binary phase diagrams
2. Ternary phase diagrams
  - Complete solubility
  - Eutectic systems
  - Peritectic systems
  - Systems with transition reactions
  - Systems with intermetallic phases
3. Thermodynamics of solution phases
4. Materials reactions involving pure condensed phases and a gaseous phase
5. Reaction equilibria in systems containing components in condensed solutions
6. Thermodynamics of multicomponent multiphase materials systems
7. Calculation of Phase Diagrams (CALPHAD)

**Recommendations:**

Knowledge of the course "Solid State Reactions and Kinetics of Phase Transformations" (Franke); basic course in materials science and Engineering; basic course in mathematics; physics or physical chemistry

regular attendance: 22 hours

self-study: 98 hours

The students know the heterogeneous phase equilibria of binary, ternary and multicomponent materials systems. They can analyze the thermodynamic properties of multiphase engineering materials and their reactions with gas and liquid phases.

**Literature**

1. Phase Equilibria, Phase Diagrams and Phase Transformations, Their Thermodynamic Basis; M. Hillert, University Press, Cambridge (2007)
2. Introduction to the Thermodynamics of Materials; D.R. Gaskell, Taylor & Francis (2008)

## Fundamentals in the Development of Commercial Vehicles I

2113812, WS 24/25, 1 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

**Content**

1. Introduction, definitions, history
2. Development tools
3. Complete vehicle
4. Cab, bodyshell work
5. Cab, interior fitting
6. Alternative drive systems
7. Drive train
8. Drive system diesel engine
9. Intercooled diesel engines

**Learning Objectives:**

The students have proper knowledge about the process of commercial vehicle development starting from the concept and the underlying original idea to the real design. They know that the customer requirements, the technical realisability, the functionality and the economy are important drivers.

The students are able to develop parts and components. Furthermore they have knowledge about different cab concepts, the interior and the interior design process. Consequently they are ready to analyze and to judge concepts of commercial vehicles as well as to participate competently in the commercial vehicle development.

**Organizational issues**

Das Vorlesungsmaterial wird auf ILIAS bereitgestellt. Das ILIAS-Passwort erhalten Sie unter <https://fast-web-01.fast.kit.edu/Passwoerterliias/>

Termine und Nähere Informationen: siehe ILIAS oder Institutshomepage

Dates and further information will be published on the homepage of the institute.

**Fundamentals in the Development of Commercial Vehicles II**

2114844, SS 2025, 1 SWS, Language: German, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

1. Gear boxes of commercial vehicles
2. Intermediate elements of the drive train
3. Axle systems
4. Front axles and driving dynamics
5. Chassis and axle suspension
6. Braking System
7. Systems
8. Excursion

**Learning Objectives:**

The students know the advantages and disadvantages of different drives. Furthermore they are familiar with components, such as transfer box, propeller shaft, powered and non-powered frontaxle etc. Beside other mechanical components, such as chassis, axle suspension and braking system, also electric and electronic systems are known. Consequently the student are able to analyze and to judge the general concepts as well as to adjust them precisely with the area of application.

## V

**Fundamentals of Energy Technology**

2130927, SS 2025, 3 SWS, Language: German, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

The objective of the course is to train the students on state of the art knowledge about the challenging fields of energy industry and the permanent competition between the economical profitability and the long-term sustainability. The students obtain basic knowledge on thermodynamics relevant to the energy sector and comprehensive knowledge on the energy sector: demand, energy types, energy mix, installations for energy production (conventional, nuclear and renewable), transport and energy storage, environmental impact and future tendencies. Students are able to use methods of economic efficiency optimization for the energy sector in a creative way, practice oriented, also specifically trained during the corresponding tutorial. The students are qualified for further training in energy engineering related fields and for (also research-related) professional activity in the energy sector.

The following relevant fields of the energy industry are covered:

- Energy demand and energy situation
- Energy types and energy mix
- Basics. Thermodynamics relevant to the energy sector
- Conventional fossil-fired power plants
- Combined Cycle Power Plants
- Cogeneration
- Nuclear energy
- Regenerative energies: hydropower, wind energy, solar energy, other energy systems
- Energy demand structures. Basics of economic efficiency and calculus. Optimization
- Energy storage
- Transport of energy
- Power generation and environment. Future of the energy industry

V

**Fusion Technology A**

2169483, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

Lecture / Practice (VÜ)  
On-Site

**Content**

To transfer the basic physical concepts of particle physics, fusion and nuclear fission; this includes fundamental questions such as how: What is a plasma? How can it be ignited? What is the difference between magnetic and inertial fusion? Based on this, aspects of the stability of plasmas, their control and particle transport are discussed. After characterizing the plasma, the "fire" of fusion, the confinement in magnetic fields is sketched, which are built up with the help of magnetic technology. Here, knowledge of superconductivity, production and design of magnets is imparted. A reactor operation with a plasma as energy source requires a continuous operation of a tritium and fuel cycle, which is generated by the fusion reactor itself. Since fusion plasmas require small material densities, vacuum technology plays a central role. Finally, the heat generated in the fusion power plant must be converted into a power plant process and the reaction products removed. The functional basics and the structure of these fusion-typical in-vessel components are presented and the current challenges and the state of the art are demonstrated.

The course describes the essential functional principles of a fusion reactor, beginning with plasma, magnet technology, the tritium and fuel cycle, vacuum technology and the associated material sciences. The physical basics will be taught and the engineering laws of scaling will be demonstrated. Special importance is attached to the understanding of the interfaces between the different subject areas, which essentially determine the engineering technical interpretations. Methods for identifying and evaluating the central parameters will be demonstrated. Based on the acquired perception skills, methods for the design of solution strategies will be taught and technical solutions will be identified, their weak points discussed and evaluated.

**Recommendations/Pre-knowledge:**

Basic knowledge of fluid mechanics, materials engineering and physics. Knowledge of heat and mass transfer and electrical engineering is helpful.

Presence time: 21 h

Self-study: 90 h

Oral examination:

Duration: approx. 30 minutes, aids: none

**Literature**

Innerhalb jedes Teilblockes wird eine Literaturliste der jeweiligen Fachliteratur angegeben. Zusätzlich erhalten die Studenten/-innen das Studienmaterial in gedruckter und elektronischer Version.

V

**Fusion Technology B**

2190492, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

Fusion Technology B is a continuation of Fusion Technology A lecture and includes the following topics:

Fusion neutronics, materials science of thermally and neutronicly highly loaded components, reactor scaling and safety as well as plasma heating and current drive. The section fusion neutronics develops the basics of fusion neutronics and its calculation methods, the nuclear physical design of a fusion reactor and the corresponding components (blankets, shielding, activation, tritium breeding ratio and dose rate). Since both neutron fluxes and area power density in a fusion power plant are significantly higher than those of other power plants, they require special materials. After an extension of existing material knowledge by fundamentals and methods for the calculation of radiation damage in materials, strategies for the material selection of functional and structural materials are shown and deepened by examples. The arrangement of components close to the plasma in a fusion power plant means changed requirements for system integration and energy conversion; these questions are the subject of the block reactor scaling and safety. In addition to the explanation of the safety objectives, the methods for achieving the objectives and the computational tools required to achieve them are dealt with in particular. To ignite the plasma, extreme temperatures of several million degrees are required. Special plasma heating methods are used for this purpose, such as electron cyclotron resonance heating (ECRH), ion cyclotron resonance heating (ICRH), current drive at the lower hybrid frequency and neutral particle injection. Their basic mode of action, design criteria, transmission options and performance are presented and discussed. In addition, the heating processes can also be used for plasma stabilization. Some considerations and limitations are presented.

The lecture, which runs over 2 semesters, is aimed at students of engineering sciences and physics after the bachelor. The aim is an introduction to the current research and development on fusion and its long-term goal of a promising energy source. After a short insight into fusion physics, the lecture focuses on key technologies for a future fusion reactor. The lecture will be accompanied by exercises at Campus Nord (block event, 2-3 afternoons per topic).

**Recommendations/Prerequisites:**

Knowledge of physics, heat and mass transfer, and design theory taught in the bachelor's degree. Attendance of the lecture Fusion technology A

Presence time: 21 h

Self-study: 49 h

Oral proof of participation in the exercises

Duration: approx. 25 minutes, aids: none

<b>V</b>	<p><b>Gear Technology</b>                  2149655, WS 24/25, 2 SWS, Language: German, <a href="#">Open in study portal</a></p>	<p><b>Lecture (V)</b>  <b>On-Site</b></p>
----------	---	---

**Content**

Based on the gearing theory, manufacturing processes and machine technologies for producing gears, the needs of modern gear manufacturing will be discussed in the lecture. For this purpose, various processes for various gear types are taught which represent the state of the art in practice today. A classification in soft and hard machining and furthermore in cutting and non-cutting technologies will be made. For comprehensive understanding the processes, machine technologies, tools and applications of the manufacturing of gears will be introduced and the current developments presented. For assessment and classification of the applications and the performance of the technologies, the methods of mass production and manufacturing defects will be discussed. Sample parts, reports from current developments in the field of research and an excursion to a gear manufacturing company round out the lecture.

**Learning Outcomes:**

The students ...

- can describe the basic terms of gears and are able to explain the imparted basics of the gearwheel and gearing theory.
- are able to specify the different manufacturing processes and machine technologies for producing gears. Furthermore they are able to explain the functional principles and the dis-/advantages of these manufacturing processes.
- can apply the basics of the gearing theory and manufacturing processes on new problems.
- are able to read and interpret measuring records for gears. are able to make an appropriate selection of a process based on a given application
- can describe the entire process chain for the production of toothed components and their respective influence on the resulting workpiece properties.

**Workload:**

regular attendance: 21 hours

self-study: 99 hours

**Lecture (V)**  
**On-Site**

**Content****Content:**

Characteristics of global trade

- Incoterms
- Customs clearance, documents and export control

Global transport and shipping

- Maritime transport, esp. container handling
- Air transport

Modeling of supply chains

- SCOR model
- Value stream analysis

Location planning in cross-border-networks

- Application of the Warehouse Location Problem
- Transport Planning

Inventory Management in global supply chains

- Stock keeping policies
- Inventory management considering lead time and shipping costs

**Media:**

presentations, black board

**Workload:**

regular attendance: 21 hours

self-study: 99 hours

**Students are able to:**

- assign basic problems of planning and operation of global supply chains and plan them with appropriate methods,
- describe requirements and characteristics of global trade and transport, and
- evaluate characteristics of the design from logistic chains regarding their suitability.

**Exam:**

The exam consists of a 60 minutes written examination (according to §4(2), 1 of the examination regulation).

The main exam is offered every summer semester. A second date for the exam is offered in winter semester only for students that did not pass the main exam.

V

**Global Production**

2149613, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**Blended (On-Site/Online)**

**Content**

The lecture examines the management of global production networks of manufacturing companies. It gives an overview of the influencing factors and challenges of global production. In-depth knowledge of common methods and procedures for planning, designing and managing global production networks is imparted.

Therefore, the lecture first of all discusses the connections and interdependencies between the business strategy and the production strategy and illustrates necessary tasks for the definition of a production strategy. Methods for site selection, for the site-specific adaptation of product design and production technology as well as for the establishment of new production sites and for the adaptation of existing production networks to changing framework conditions are subsequently taught within the context of the design of the network footprint. With regard to the management of global production networks, the lecture addresses challenges associated with coordination, procurement and order management in global networks. The lecture is complemented by a discussion on the use of industry 4.0 applications in global production and current trends in planning, designing and managing global production networks.

The topics include:

- Basic conditions and influencing factors of global production (historical development, targets, chances and threats)
- Framework for planning, designing and managing global production networks
- Production strategies for global production networks
  - From business strategy to production strategy
  - Tasks of the production strategy (product portfolio management, circular economy, planning of production depth, production-related research and development)
- Design of global production networks
  - Basic types of network structures
  - Planning process for the design of the network footprint
  - Adaptation of the network footprint
  - Site selection
  - Location-specific adaptation of production technology and product design
- Management of global production networks
  - Network coordination
  - Procurement process
  - Order management
- Trends in planning, designing and managing global production networks

**Learning Outcomes:**

The students ...

- can explain the general conditions and influencing factors of global production
- are capable to apply defined procedures for site selection and to evaluate site decisions with the help of different methods
- are able to select the adequate scope of design for siteappropriate production and product construction casespecifically
- can state the central elements in the planning process of establishing a new production site.
- are capable to make use of the methods to design and scale global production networks for company-individual problems
- are able to show up the challenges and potentials of the departments sales, procurement as well as research and development on global basis.

V

**Handling Characteristics of Motor Vehicles I**

2113807, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)  
Online**

**Content**

1. Problem definition: Control loop driver - vehicle - environment (e.g. coordinate systems, modes of motion of the car body and the wheels)
2. Simulation models: Creation from motion equations (method according to D'Alembert, method according to Lagrange, programme packages for automatically producing of simulation equations), model for handling characteristics (task, motion equations)
3. Tyre behavior: Basics, dry, wet and winter-smooth roadway

Learning Objectives:

The students know the basic connections between drivers, vehicles and environment. They can build up a vehicle simulation model, with which forces of inertia, aerodynamic forces and tyre forces as well as the appropriate moments are considered. They have proper knowledge in the area of tyre characteristics, since a special meaning comes to the tire behavior during driving dynamics simulation. Consequently they are ready to analyze the most important influencing factors on the driving behaviour and to contribute to the optimization of the handling characteristics.

120 hours

Below you will find excerpts from events related to this course:

V

**Handling Characteristics of Motor Vehicles II**

2114838, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
Online

**Content**

1. Vehicle handling: Bases, steady state cornering, steering input step, single sine, double track switching, slalom, cross-wind behavior, uneven roadway

2. stability behavior: Basics, stability conditions for single vehicles and for vehicles with trailer

Learning Objectives:

The students have an overview of common test methods, with which the handling of vehicles is gauged. They are able to interpret results of different stationary and transient testing methods. Apart from the methods, with which e.g. the driveability in curves or the transient behaviour from vehicles can be registered, also the influences from cross-wind and from uneven roadways on the handling characteristics are well known. They are familiar with the stability behavior from single vehicles and from vehicles with trailer. Consequently they are ready to judge the driving behaviour of vehicles and to change it by specific vehicle modifications.

### Heat Transfer and Cooling at Thermally Highly Loaded Components

2170466, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

**Content***Teaching Content:*

Thermally highly loaded components can be found in several fields of application: The hot gas temperatures of **modern gas turbines** and **jet engines** exceed the maximum tolerable temperatures by several hundreds of Kelvin. By increasing the power density of electric motors and the related power electronics in the field of **e-mobility**, the surface, available for lost heat rejection, is reduced. Furthermore, the temperature of the **battery** must be kept within a tight range to achieve an efficient operation. To ensure reliability of lifetime and operational safety, complex cooling technology must be applied.

First, the basics of forced convection and thermal radiation will be introduced in this lesson. Based on that various cooling methods will be presented. Specific pros and cons will be identified and new concepts for further improvement of cooling will be discussed. Subsequently, the capability of the introduced cooling methods is supported by practical applications. Finally, experimental and numerical methods for the characterization of heat transfer will be presented.

*Workload:*

regular attendance: 30 h

self-study: 90 h

*Learning Objectives:*

The students are able to:

- outline the basics of forced convection, thermal radiation and film cooling
- name, analyse and differentiate between different cooling methods
- judge the advantages and disadvantages of cooling methods and discuss approaches for the improvement of complex cooling methods
- design cooling concepts for thermally highly loaded components in a simplified manner
- name and rate the experimental and numerical methods for the characterisation of heat transfer

*Exam:*

oral exam, approximately 30 minutes, no tools or reference materials may be used during the exam

*Language:* German

**Flow and heat transfer in nuclear reactors**

2189907, WS 24/25, 2 SWS, Language: English, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

This lecture is designed for students of mechanical engineering and other engineering disciplines in their Bachelor or Master studies. The students will understand the most important heat transfer processes and learn the methods for the analysis of flow and heat transfer in nuclear reactors. Students are capable of explaining the thermal-hydraulic processes occurring in nuclear reactors and of selecting suitable models or simulation codes for thermal-hydraulic design and analysis.

1. Reactor types and thermal-hydraulic design criteria
2. Heat transfer processes and modeling
3. Pressure drop calculation
4. Temperature distribution in nuclear reactor
5. Numerical analysis methods for nuclear reactor thermal-hydraulics

**Organizational issues**

This compact English lecture will be given on February 10 - 12, 2025, 09:00-17:00.

in seminar room of the Institute IATF, Building 07.08, Room 331

**Literature**

### Heatpumps

2166534, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

### Content

The aim of this lecture is to promote heat pumps as heating systems for small and medium scale facilities and to discuss their advantages as well as their drawbacks. After considering the actual energy situation and the political requirements the different aspects of heat pumps are elucidated. The requirements concerning heat sources, the different components and the various types of heat pumps are discussed. In addition ecological and economical aspects are taken into consideration. The coupling of heat pumps with heat accumulators in heating systems will also be part of the lecture.

**Competence Certificate**

At the end of the semester, there will be a written exam (90 min).

**Prerequisites**

none

**Recommendation**

preliminary knowlegde in mathematics, physics and materials science  
regular participation in the additionally offered computer exercises

**Workload**

150 hours

*Below you will find excerpts from events related to this course:*

<b>V</b>	<p><b>High Performance Computing</b></p> <p>2183721, WS 24/25, 2 SWS, Language: German, <a href="#">Open in study portal</a></p>	<p><b>Lecture / Practice (VÜ)</b> <b>Cancelled</b></p>
----------	--	--

**Content**

**PLEASE NOTE: This lecture is only offered in the winter semester!**

Topics of the high performance computing course are:

- architectures of parallel platforms
- parallel programming models
- performance analysis of concurrent programs
- parallelization models
- MPI and OpenMP
- monte-Carlo method
- 1D & 2D heat diffusion
- raycasting
- n-body problem
- simple phase-field models

The student

- can explain the foundations and strategies of parallel programming
- can efficiently apply high performance computers for simulations by elaborating respective parallelisation techniques.
- has an overview of typical applications and the specific requirements for parallelization.
- knows the concepts of parallelisation and is capable to apply these to efficiently use high performance computing resources and the growing performance of multi core processors in science and industry.
- has experiences in programming of parallel algorithms through integrated computer exercises.

preliminary knowledge in mathematics, physics and materials science recommended

regular attendance: 22,5 hours lecture, 11,5 hours exercises

self-study: 116 hours

We regularly discuss exercises at the computer.

At the end of the semester, there will be a written exam.

**Organizational issues**

Dieser Kurs findet im Wintersemester 2024/2025 nicht statt.

**Lecture (V)**  
**On-Site**

**Content**

Oral examination (about 30 min)

Teaching content:

- High temperature functional and structural materials
- Thermodynamic fundamentals
- Kinetics and oxidation rate laws
- Defects in oxides
- Carl Wagner oxidation theory
- Oxidation of alloys
- Internal corrosion
- Protective coatings

Qualification targets:

The students gain fundamental understanding about underlying oxidation mechanisms of pure metals and complex alloys and acquire knowledge about ways to intrinsically protect high temperature materials by changing their chemical composition or/and atmospheric conditions as well as by applying protective coatings.

Recommendations:

Basic course in materials science and engineering and the course *Introduction to high temperature materials* (Gorr)

**Lecture (V)**  
On-Site

**Content**

- Phenomenology of High Temperature Deformation
- Deformation Mechanisms
- High Temperature Structural Materials

**learning objectives:**

Students are able to

- Define properly the term "high temperature" with respect to materials
- Describe the shape of the creep curve based on underlying deformation mechanisms
- Rationalize the influence of relevant parameters such as temperature, stress, microstructure on the high temperature deformation behavior
- Develop strategies for improving creep resistance of alloys via modifying their composition
- Select properly industrially relevant high temperature structural materials for various applications

**Holistic approach of managing power plant operation under uncertainty and volatility**

2189405, WS 24/25, 2 SWS, Language: English, [Open in study portal](#)

**Lecture (V)**  
**Online**

## **Content**

Main Contents:

The structure of electricity markets

Requirements from network operators

The basics of commodity markets

The impact of regulation on power plant operation

The role of behavioral economics in power plant decision making

Integration of renewable energy sources into the electricity market

Calibration of power plant operation and maintenance to market requirements

Asset management for power plant fleets

Applying financial engineering to optimize asset utilization

Day-to-day decision making for power plant operation

The lecture provides an overview of the many practical aspects of power plant operation. For this purpose, the knowledge of the energy and commodity markets, the regulatory boundary conditions, the energy trading instruments, the principles of fleet management and the requirements of power plant maintenance are required.

For the purpose of an efficient management of a power plant fleet it is explained how a variety of statistical models can be used to determine the optimal combination of resource purchases, outage management, load availability and ask prices.

Each credit point equals to 25-30 h working time of a student. Thereby, the time is based on an average student finishing with an average score. The working time can be split into: 1 attendance of the lectures, 2. pre- and post-processing of the lecture, 3 preparations for examination.

Students understand the many aspects of power plant operation: the structure of the energy and commodity markets, the regulatory boundary conditions, the energy trading instruments, the principles of fleet management and the requirements of power plant maintenance.

Furthermore, students can develop on their own a suitable strategy for the management of a power plant fleet.

Oral exam of about 25 min.

V

**Human Factors Engineering I: Ergonomics**

2109035, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

The course "Human Factors Engineering I: Ergonomics" takes place in the first half of the semester on Wednesday and Thursday.

In the second half of the semester the course "Human Factors Engineering II: Work Organisation" takes place on Wednesday and Thursday.

Content of teaching:

1. Principles of human work
2. Behavioural-science data acquisition
3. workplace design
4. work environment design
5. work management
6. labour law and advocacy groups

Learning target:

The students acquire a basic knowledge in the field of ergonomics:

- They are able to consider cognitive, physiological, anthropometric, and safety technical aspects in order to design workplaces ergonomically.
- Just as well they know physical and psycho-physical fundamentals (e. g. noise, lighting, climate) in the field of work-environmental design.
- Furthermore the students are able to evaluate workplaces by knowing and being able to apply essential methods of time studies and payment systems.
- Finally, they get a first, overall insight into the German labour law as well as into the organisation of advocacy groups beyond companies.

Further on the participants get to know basic methods of behavioral-science data acquisition (e. g. eye-tracking, ECG, dual-task-paradigm).

**Organizational issues**

**Die Veranstaltungen „Arbeitswissenschaft I: Ergonomie“ und „Arbeitswissenschaft II: Arbeitsorganisation“ wurden im Wintersemester 2024/2025 zum letzten Mal in dieser Form angeboten. Die Klausuren im März 2025 bzw. die zugehörige Nachholklausur im Sommer werden wie vorgesehen angeboten. Sollten Sie bereits in dem Schwerpunkt „Mensch - Technik - Organisation“ eingeschrieben sein, so können Sie im Wintersemester 2025/26 als Ersatz für die beiden Kernfächer die englischen Veranstaltungen "Human Factors Engineering I (workplace design)" und „Human Factors Engineering II (organizational design)“ hören. Sollten Sie diese Veranstaltungen im Rahmen Ihres Bachelorstudiums belegen, ist natürlich eine erneute Wahl im Masterstudium ausgeschlossen. Eine Neueinschreibung in der Schwerpunkt ist ab sofort nicht mehr möglich.**

**Human Factors Engineering II: Work Organisation**

2109036, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

### Content

The course "Human Factors Engineering I: Ergonomics" takes place in the first half of the semester on Wednesday and Thursday.

In the second half of the semester the course "Human Factors Engineering II: Work Organisation" takes place on Wednesday and Thursday.

Content of teaching:

1. Fundamentals of work organization
2. Empirical research methods
3. Individual level
  - personnel selection
  - personnel development
  - personnel assessment
  - work satisfaction/motivation
4. Group level
  - interaction and communication
  - management of employees
  - team work
5. Organizational level
  - structural organization
  - process organization
  - production organization

Learning target:

The students gain a first insight into empirical research methods (e. g. experimental design, statistical data evaluation). Particularly, they acquire a basic knowledge in the field of work organisation:

- *Organizational level.* Within this module the students gain also a fundamental knowledge in the field of structural, process, and production organization.
- *Group level.* Besides, they get to know basic aspects of industrial teamwork and they know relevant theories in the field of interaction and communication, the management of employees as well as work satisfaction and motivation.
- *individual level.* Finally, the students get to know also methods in the field of personnel selection, development, and assessment.

V

**Humanoid Robotics Laboratory**

2424890, WS 24/25, 4 SWS, Language: German/English, [Open in study portal](#)

**Practical course (P)  
On-Site**

**Content**

In this practical course, a is worked on alone or in small teams with up to 3 students. Questions of humanoid robotics are dealt with, such as semantic scene interpretation, active perception, planning of grasping and manipulation tasks, action representation with motion primitives, and programming by demonstration.

The project work (alone or in groups) is performed largely independently but supported by scientific staff of the H2T. At the end of the practical course, the work has to be documented and presented in a scientific talk.

**Learning Objectives:**

- Students will be able to independently understand, structure, analyze, and solve a complex humanoid robotics problem using existing programming skills, alone or in a small team.
- Students can convey complex technical content in a presentation.

**Recommendation:**

- Very good programming skills in at least one high-level programming language are strongly recommended.
- Attendance of the lectures Robotics 1, Robotics 2, Robotics 3, as well as the robotics practical course are recommended.
- Project-specific recommendations (knowledge of C++, Python, ...) will be announced in the individual project descriptions

**Organizational issues**

Die Erfolgskontrolle erfolgt in Form einer mündlichen Prüfung nach § 4 Abs. 2 Nr. 2 SPO.

Die Modulnote ist die Note der mündlichen Prüfung.

Zielgruppe: Das Praktikum richtet sich an Studierende der Informatik, Elektrotechnik, Maschinenbau, Mechatronik im Masterstudium sowie alle Interessenten an der Robotik.

**Arbeitsaufwand:**

6 LP entspricht ca. 180h, davon

1. 10h Präsenzzeit in Praktikumsbesprechungen
2. 10h Vor- und Nachbereitung derselben
3. 150h Selbststudium zur Bearbeitung des Themas

ca. 10h Vorbereitung und Halten eines wissenschaftlichen Vortrags

### Competence Certificate

oral exam (approx. 20 min)

The exam is offered in German only!

### Annotation

The course is capacity-limited, therefore the allocation of places is based on § 5 para. 4 in the module handbook: **Registration and admission to module examinations and courses**. This results in the following selection criteria:

- Students of the degree program have priority over students from outside the degree program
- Among students within the degree program, a decision may be made based on academic progress (not just with subject semesters)
- In the case of equal academic progress according to waiting time
- In the case of equal waiting time by lot

The exact procedure is explained on **ILIAS**.

"Successful participation requires active and continuous participation in the course."

### Workload

120 hours

Below you will find excerpts from events related to this course:

V

## Human-oriented Productivity Management: Personnel Management

2109021, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

Block (B)  
Blended (On-Site/Online)

**Content**

1. Introduction: change of the working world, work organisation of successful companies, requirements for Industrial Engineering
  2. Human-oriented Productivity Management
  3. Organisation of enterprises:
    - Process-oriented work organisation
    - Operational and organisational structure
    - Holistic production systems
  4. Basics of personnel management:
    - Identification of available capacity & capacity requirements
    - Management of working time
    - Types of mobile working
  5. Systematic design of the human-resource allocation
  6. Case study (group work)
  7. Presentation of the solutions developed
- Knowledge in Production Management/Industrial Engineering is required
  - Knowledge of Work Science and Economics is helpful

Learning target:

The student is capable ...

- to describe and explain the current megatrends, resulting challenges for enterprises as well as operational success factors
- to explain tasks and methods of human-oriented productivity management
- to analyse an existing working system
- to determine the available capacity and the capacity needed of a work system
- to use basic methods and tools of personnel management and to evaluate existing solutions
- to systematically design and organise the employment of staff

**Organizational issues**

- Die Lehrveranstaltung ist kapazitätsbegrenzt, daher richtet sich die Platzvergabe nach § 5 Abs. 4 im Modulhandbuch: Anmeldung und Zulassung zu den Modulprüfungen und Lehrveranstaltungen. (genauer auf ILIAS)
- Anwesenheitspflicht für die gesamte Vorlesung
- nur für Studierende im Master-Studium

**Literature**

Das Skript und Literaturhinweise stehen auf ILIAS zum Download zur Verfügung.

<b>V</b>	<b>Hydraulic Fluid Machinery</b> 2157432, SS 2025, 4 SWS, Language: German, <a href="#">Open in study portal</a>	<b>Lecture (V)</b> <b>On-Site</b>
----------	---	--------------------------------------

**Content**

1. Introduction
2. Basic equations
3. System analysis
4. Elementary Theory (Euler's equation of Fluid Machinery)
5. Operation and Performance Characteristics
6. Similarities, Specific Values
7. Control technics
8. Wind Turbines, Propellers
9. Cavitation

**Recommendations:**

3154510 – Fluid Mechanics I

3153511 – Fluid Mechanics II

Students get to know the basics of hydraulic fluid machinery (pumps, fans, hydroturbines, windturbines, hydrodynamic transmissions) in general. Application of the knowledge in different fields of engineering.

The lecture introduces the basics of Hydraulic Fluid Machinery. The different types and shapes are presented. The basic equations for the preservation of mass, momentum and energy are discussed. Velocity schemes in typical cascades are shown, the Euler equation of fluid machinery and performance characteristics are deduced.

Similarities and dimensionless parameters are discussed. Fundamental aspects of operation and cavitation are shown.

Students are able to understand the working principle of Hydraulic Fluid Machinery as well as the interaction with typical systems, in which they are integrated.

regular attendance: 56 hours

self-study: 150 hours

preparation for exam: 40 hours

Oral or written examination (see announcement)

No tools or reference materials may be used during the exam.

V

**Hydrodynamic Stability: From Order to Chaos**

2154437, SS 2025, 2 SWS, Language: German/English, [Open in study portal](#)

**Lecture (V)**  
**Blended (On-Site/Online)**

**Content**

The students can apply the analytic and numerical methods for an evaluation of stability properties of hydrodynamic systems. They are qualified to discuss the characteristic influence of parameter changes (e.g. Reynolds number) on the calculated results with respect to the flow character and properties (e.g. transition laminar/turbulent flow).

Increasing a control parameter of a thermohydraulic system, e.g. the Reynolds number, the initial flow pattern (e.g. stationary flow) can be replaced by a different pattern (e.g. turbulent flow).

Typical hydrodynamic instabilities are summarized in the lecture.

The systematic analysis of thermohydraulic stability problems is developed for the case of Rayleigh-Bernard convection (fluid layer heated from below) and selected examples from fluid dynamics.

Covered is:

- linear stability analysis: determine limiting control parameter value up to which the basic flow pattern is stable against small perturbations.
- nonlinear reduced order modeling, capable to characterize more complex flow patterns
- Lorenz system: a generic system exhibiting chaotic behavior

## Hydrogen and reFuels - Energy Conversion in Combustion Engines

2134155, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

### Content

New types of CO<sub>2</sub>-neutral fuels such as gaseous hydrogen but also liquid synthetic fuels often place specific requirements on engine systems that differ significantly from operation with conventional fuels. These special aspects of engine energy conversion are dealt with in this lecture.

Introduction

Thermodynamics of combustion engines

Fundamentals

gas exchange

Flow field

Wall heat losses

Combustion in gasoline engines

Pressure Trace Analysis

Combustion in Diesel engines

Specific Topics of Hydrogen Combsution

Waste heat recovery

## Hydrogen in Materials – Exercises and Lab Course

2173584, SS 2025, 2 SWS, Language: English, [Open in study portal](#)

Practice (Ü)  
On-Site

### Content

In this exercise with lab course the contents of the lecture “Hydrogen in Materials: from Energy Storage to Hydrogen Embrittlement” are deepened. The students know the differences in thermodynamics and kinetics of the hydrogen interaction with storage materials and construction materials. The students can describe the hydrogen interaction with microstructural defects in materials, and they know the resulting effects on the materials’ mechanical integrity. Based on this, the students can express the requirements of the respective materials classes and transfer them to engineering applications.

Utilizing proper experimental setups, the students can measure hydrogen induced stresses in materials as well as the hydrogens’ diffusivity and its chemical potential. From the measurement data, the students can construct metal-hydrogen phase diagrams, and they can qualitatively assess the defect density in the metal.

## Hydrogen in Materials: from Energy Storage to Hydrogen Embrittlement

2173588, SS 2025, 2 SWS, Language: English, [Open in study portal](#)

Lecture (V)  
On-Site

**Content**

This lecture teaches physical and chemical basics of hydrogen adsorption and absorption of different materials. It trains the understanding of the specific lattice positions that hydrogen occupies within solids, and its impact on material properties. A thermodynamical approach yields Sievert's law, allowing the students to describe the different solubilities of hydrogen (and other gases) in solid materials. Further thermodynamic data can be obtained using van't Hoff plots of phase transformation pressures. The impact of ternary alloy components, as described by semi-empirical models, will be recognized. The specific mobility of hydrogen in materials will be understood, which divides into classical diffusion and quantum mechanical tunneling processes. The students can describe the interaction of hydrogen with defects in crystal lattices, which is of special interest for properties of nano-scale materials or for the hydrogen embrittlement of steels. Basic embrittlement models can be explained by the students. Actual hydrogen storage systems can be summarized.

learning objectives:

- o Hydrogen as energy storage – the hydrogen cycle and safety issues
- o methods for hydrogen charging of materials and hydrogen detection
- o Hydrogen adsorption at and absorption in different solids, Sievert's law
- o interstitial lattice sites and lattice expansion
- o Hydrides, van't Hoff plots, phase transitions, M-H binary phase diagrams
- o ternary alloy effects
- o hydrogen mobility in materials: interstitial diffusion and quantum mechanical tunneling
- o interaction of hydrogen with defects
- o hydrogen embrittlement of steels, different embrittlement models
- o hydrogen in nano-scale systems and new storage materials

**Lecture (V)**  
**On-Site**

**Content**

The course content is the cross-cutting issue of hydrogen as energy carrier. After successful participation the students may reflect on the fundamental technological basis of an energy system using predominantly hydrogen as an energy carrier or energy storage. Based on this knowledge they may objectify the principle idea of an hydrogen economy.

The students know the fundamental physical and chemical properties of hydrogen and may apply their knowledge on thermodynamics to compare efficiencies of different solutions with hydrogen. They can list, compare and evaluate established and future solutions for production, storage and distribution of hydrogen. They can explain advantages and disadvantages of using hydrogen in conventional combustion processes versus using hydrogen in different fuel cells. In particular the can describe the specific safety aspects related to hydrogen, compare them with other energy vectors and evaluate different measures for risk mitigation.

- Basic concepts
- Production
- Transport and storage
- Application
- Safety aspects

**Industrial aerodynamics**

2153425, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Blended (On-Site/Online)**

**Content**

This compact lecture deals with flows and aeroacoustics with significance in vehicle development. A special focus is set on the optimization of external vehicle aerodynamics and the presentation of modern industrial wind tunnel technology. The second major thematic block includes both, aeroacoustic basics principles and practical examples of aeroacoustics, especially in the field of automotive technology. These fields are explained in their phenomenology, the corresponding theories are discussed and the tools for measurement and simulation are introduced and demonstrated. This lecture focusses on industry relevant methods for analyses and descriptions of forces, aeroacoustic sound fields, flow structures and turbulence. In addition, an overview of numerical methods for industrial applications is given. The integration and interconnection of the methods in the development processes are discussed exemplarily.

An excursion to the Mercedes-Benz AG wind tunnel and the research and development centers is planned.

- Introduction
- Aerodynamics of bluff bodies
- Industrial flow measurement techniques and modern wind tunnel technology
- Overview of flow simulation in automotive industry
- Vehicle aerodynamics
- Passenger comfort of roadsters and cabriolets
- Soiling of road vehicles
- Aeroacoustics: basic principles and practical examples of aeroacoustics, especially in the field of automotive technology including aeroacoustic measurement techniques and numerical methods

Students can describe the different properties of aerodynamics and aeroacoustics of vehicles flows. They are qualified to analyze external flows around the vehicles and aeroacoustic sound fields of vehicles.

**Practical course (P)  
On-Site**

**Content**

This course is designed to teach students how to operate and control mobile robotic systems. Mobile robots have become a standard in the industry. This course will give students their first practical experience in this area.

For self-study, videos on the various relevant topics will be made available before the start of the course. Together with the University of Stuttgart, we will form teams at each location to implement either a vehicle control system or a control system for assigning jobs to different vehicles. The implementation will be based on a standardized communication interface - the VDA 5050 - which enables a uniform data exchange between the system participants. The teams will get to know each other at a kick-off event in Stuttgart. For the implementation, the teams will have to exchange information in order to jointly control a fleet of real mobile industrial robots in the final event at KIT. A simulation environment will also be provided for the development process, allowing testing without hardware in the early phases of the project.

**Organizational issues**

Das Praktikum findet in Kooperation mit der Universität Stuttgart statt. Es gibt zwei verpflichtende Präsenztage, das Kickoff findet an der Universität Stuttgart am 07.01.2025 statt, die Abschlussveranstaltung mit Live-Demo findet am KIT am 04.02.2025 statt.

Es werden an beiden Standorten Teams betreut, die sich während des Praktikums hybride austauschen und für die Abschlussveranstaltung eine gemeinsame Live-Demo vorbereiten. Während des Praktikums arbeiten die Teams selbständig an der Aufgabenstellung. Es werden dabei regelmäßige Sprechstunden, sowie weitere Input-Session angeboten. Der Fortschritt wird in zwei Zwischenmeilensteinen präsentiert.

Die Teilnehmerzahl ist beschränkt. Die Auswahl erfolgt nach einem Auswahlverfahren.

Um sich für die Teilnahme zu bewerben stellen Sie bitte einen Aufnahmeantrag für den aktuellen Ilias-Kurs mit einem kurzen Bewerbungstext. Dieser sollte ihre bisherigen Erfahrungen sowie ihre Motivation für das Praktikum beinhalten.

Voraussetzung sind Grundkenntnisse im Programmieren (bspw. mit Python, C++, ...).

Geplanter Termin: 07.01.2025 - 04.02.2025

## Innovation2Business – Innovation Strategy in the Industrial Corporate Practice Lecture (V) On-Site

2145182, WS 24/25, 2 SWS, Language: German/English, [Open in study portal](#)

### Content

lecture block at the Bühl & Herzogenaurach locations with plant tours & fireside evenings + exam-preparatory Q&A.

Exam: written, limited to 30 seats (recommended for: Master's degree; mechanical engineering, industrial engineering, electrical engineering, computer science) → see module manual for details.

In this lecture series, use Schaeffler as an example to learn how global companies continuously transform themselves to grow sustainably and become

maintain a leading position in the global market in the long term through business-oriented innovation.

Together we will go through the most important elements of the innovation and development process and learn about the successes and learnings based on

vivid examples from practice.

Join the fireside evenings with the speakers to discuss the lecture content and beyond in a relaxed atmosphere.

The event is limited to 30 students and is free for you (meals, bus transfers & accommodations).

### Organizational issues

Vorlesung findet an Schaeffler-Standorten (Herzogenaurach und Bühl) statt.

**Innovative Nuclear Systems**

2130973, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**On-Site**

**Content**

This lecture is addressed to students of mechanical engineering, chemical engineering and physics. Goal of the lecture is the explanation of state-of-the-art development of nuclear systems. Nuclear systems, that are from today's point of view promising will be presented and explained. The main characteristics of such systems and the associated challenges are also part of the lecture.

1. state of the art and development tendencies in nuclear systems
2. advanced concepts in light water cooled systems
3. new developments in fast reactors
4. development tendencies in gas-cooled plants
5. transmutation systems for waste management
6. fusion systems

**On-Site**

**Content**

Registration required in the previous summer semester. The lecture starts in first week of October.

**Prerequisites:**

The participation in "Integrated Product Development" requires the concurrent participation in lectures (2145156), tutorials (2145157) and project work (2145300).

Due to organizational reasons, the number of participants is limited. Thus a selection has to be made. For registration to the selection process a standard form has to be used, that can be downloaded from IPEK homepage from april to july. The selection itself is made by Prof. Albers in personal interviews.

**Recommendations:**

none

**Workload:**

regular attendance: 84 h

self-study: 288 h

**Examination:**

oral examination (60 minutes)

combined examination of lectures, tutorials and project work

**Course content:**

organizational integration: integrated product engineering model, core team management and simultaneous engineering

informational integration: innovation management, cost management, quality management and knowledge management

personal integration: team coaching and leadership management

invited lectures

**Learning objectives:**

The Students are able to ...

- analyze and evaluate product development processes based on examples and their own experiences.
- plan, control and evaluate the working process systematically.
- choose and use suitable methods of product development, system analysis and innovation management under consideration of the particular situation.
- prove their results.
- develop complex technical solutions in a team and to present them to qualified persons as well as non-qualified persons
- to design overall product development processes under consideration of market-, customer- and company- aspects

**Others (sonst.)  
On-Site**

**Content**

Participation only possible in combination with the lecture 2145156 'Integrated Product Development'.

**Prerequisites:**

The participation in "Integrated Product Development" requires the concurrent participation in lectures (2145156), tutorials (2145157) and project work (2145300).

Due to organizational reasons, the number of participants is limited to 42 persons. Thus a selection has to be made. For registration to the selection process a standard form has to be used, that can be downloaded from IPEK homepage from april to july. The selection itself is made by Prof. Albers in personal interviews.

**Recommendations:**

none

**Workload:**

regular attendance: 21 h

self-study: 99 h

**Examination:**

oral examination (60 minutes)

combined examination of lectures, tutorials and project work

**Course content:**

The project work begins with the early stages of product development, i.e. the identification of market trends and needs. Based on this information the students develop scenarios for future markets and create product profiles, which describe the customers and their demands without anticipating possible product solutions. After having passed several following milestones for ideas, concepts and designs, virtual prototypes and function prototypes are presented to an audience.

The project work is supported by coaching through skilled faculty staff. Additionally weekly tutorials, respectively workshops are given. For doing the project the teams gain access to team workspaces featuring IT-infrastructure and relevant software, such as office, CAD or FEA. Further on the teams learn how team cooperation and knowledge management can be supported in design project by using a wiki system.s

**Learning objectives:**

The center of "Integrated Product Development" constitutes itself in the development of a technical product within independent working student teams on the basis of the market situation up to virtual and real prototypes. Thereby the integrate treatment of the product development process is of importance. The project teams hereby represent development departments of medium sized companies, in which the presented methods and tools are field - experienced applied and ideas are transformed into concrete product models.

For the preparation of this development project the basics of 3D-CAD-modelling (Pro/ENGINEER) as well as different tools and methods of creative designing, of sketching and solution finding are mediated in workshops. Special events impart an insight of presentation techniques and the meaning of technical design.

### Integrated Production Planning in the Age of Industry 4.0

2150660, SS 2025, 6 SWS, Language: German, [Open in study portal](#)

Lecture / Practice (VÜ)  
On-Site

**Content**

Integrated Production Planning in the age of Industry 4.0 will be taught in the context of this engineering science lecture. In addition to a comprehensive introduction to Industry 4.0, the following topics will be addressed at the beginning of the lecture:

- Basics, history and temporal development of production
- Integrated production planning and integrated digital engineering
- Principles of integrated production systems and further development with Industry 4.0

Building on this, the phases of integrated production planning are taught in accordance with VDI Guideline 5200, whereby special features of parts production and assembly are dealt with in the context of case studies:

- Factory planning system
- Definition of objectives
- Data collection and analysis
- Concept planning (structural development, structural dimensioning and rough layout)
- Detailed planning (PPS, process simulation as a validation tool, planning of conveyor technology and storage systems for linking production and IT systems in the I4.0 factory )
- Preparation and monitoring of implementation
- Start-up and series support

The lecture contents are complemented by numerous current practical examples with a strong Industry 4.0 reference. Aspects of sustainability are anchored in all units and thus basic knowledge of sustainable production planning is taught. Within the exercises the lecture contents are deepened and applied to specific problems and tasks.

**Learning Outcomes:**

The students ...

- can discuss basic questions of production technology.
- are able to apply the methods of integrated production planning to new problems.
- are able to analyze and evaluate the suitability of the methods, procedures and techniques for a specific problem.
- can apply the learned methods of integrated production planning to new problems.
- can use their knowledge targeted for efficient production technology.
- know the basic features of sustainable production planning and can apply underlying knowledge.

## Integrative Strategies in Production and Development of High Performance Cars

2150601, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

**Content**

The lecture deals with the technical and organizational aspects of integrated development and production of sports cars on the example of Porsche AG. The lecture begins with an introduction and discussion of social trends. The deepening of standardized development processes in the automotive practice and current development strategies follow. The management of complex development projects is a first focus of the lecture. The complex interlinkage between development, production and purchasing are a second focus. Methods of analysis of technological core competencies complement the lecture. The course is strongly oriented towards the practice and is provided with many current examples.

The main topics are:

- Introduction to social trends towards high performance cars
- Automotive Production Processes
- Integrative R&D strategies and holistic capacity management
- Management of complex projects
- Interlinkage between R&D, production and purchasing
- The modern role of manufacturing from a R&D perspective
- Global R&D and production
- Methods to identify core competencies

**Learning Outcomes:**

The students ...

- are capable to specify the current technological and social challenges in automotive industry.
- are qualified to identify interlinkages between development processes and production systems.
- are able to explain challenges and solutions of global markets and global production of premium products.
- are able to explain modern methods to identify key competences of producing companies.

**Workload:**

regular attendance: 21 hours

self-study: 99 hours

**Literature****Medien:**

Skript zur Veranstaltung wird über (<https://ilias.studium.kit.edu/>) bereitgestellt.

**Media:**

Lecture notes will be provided in Ilias (<https://ilias.studium.kit.edu/>).

## Intellectual Property Rights and Strategies in Industrial Companies

2147161, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

Block (B)  
On-Site

**Content**

Attendance at lectures (5 L): 24h

Personal preparation and follow-up of lecture and exercise: 5h

Preparation exam: 31h

The students understand and are able to describe the basics of intellectual property, particularly with regard to the filing and obtaining of property rights. They can name the criteria of project-integrated intellectual property management and strategic patenting in innovative companies. Students are also able to describe the key regulations of the law regarding employee invention and to illustrate the challenges of intellectual properties with reference to examples.

The lecture will describe the requirements to be fulfilled and how protection is obtained for patents, design rights and trademarks, with a particular focus on Germany, Europe and the EU. Active, project-integrated intellectual property management and the use of strategic patenting by technologically oriented companies will also be discussed. Furthermore, the significance of innovations and intellectual property for both business and industry will be demonstrated using practical examples, before going on to consider the international challenges posed by intellectual

property and current trends in the sector. Within the context of licensing and infringement, insight will be provided as to the relevance of communication, professional negotiations and dispute resolution procedures, such as mediation for example. The final item on the agenda will cover those aspects of corporate law that are relevant to intellectual property.

Lecture overview:

1. Introduction to intellectual property
2. The profession of the patent attorney
3. Filing and obtaining intellectual property rights
4. Patent literature as a source of knowledge and information
5. The law regarding employee inventions
6. Active, project-integrated intellectual property management
7. Strategic patenting
8. The significance of intellectual property
9. International challenges and trends
10. Professional negotiations and dispute resolution procedures
11. Aspects of corporate law

**International Production Engineering A**

2150600, SS 2025, 2 SWS, Language: German/English, [Open in study portal](#)

Lecture (V)  
Blended (On-Site/Online)

**Content**

The course "International Production Engineering" offers a practical insight into the development of production plants in an international environment. A student team works on a current and concrete problem in the field of production engineering, which is introduced into the project by an industrial partner who is operating as well in Germany as in China.

As part of the course "International Production Engineering A", the problem will initially be transferred into work packages. According to the elaborated project plan, ideas and concepts for a solution of the problem will be generated and developed. Based on the concepts, the selected solution approach is elaborated and validated, e.g. through simulation, programming and/or design, but always in the context of production technology. The practical implementation of the developed solution is part of the course "International Production Engineering B" during an eight-week research stay in China.

The project will be carried out by the students under the guidance of scientific staff and in cooperation with the industrial partner. The results of the project will be presented and discussed with the project partner in a final presentation (respectively IPE A and B).

More details about the course are discussed in an information event (always in January/February, the exact date is published on the homepage: [www.wbk.kit.edu](http://www.wbk.kit.edu)).

The project offers students ...

- the unique opportunity to put the contents of the accompanying lecture into practice in an interdisciplinary and creative context,
- to gain insights into a wide range of development activities relevant for their future careers,
- cooperation with an attractive industrial partner,
- work in a team with other students with competent support from scientific staff,
- first practical experience in project management,
- international practical experience.

**Learning Outcomes:**

The students ...

- can develop ideas for technical solutions in the environment of production plants in a team and evaluate their feasibility according to technical and economic criteria
- are capable of selecting the essential components and modules of a production plant and carrying out the necessary calculations
- can use FEM simulations to predict and evaluate the static and dynamic behavior of an assembly
- are able to present, plan and assess their own work and decision-making processes
- are able to apply basic methods of project management in an international environment.

**Workload:**

regular attendance: 21 hours

self-study: 99 hours

**Organizational issues**

Aus organisatorischen Gründen ist die Teilnehmerzahl der Lehrveranstaltung begrenzt. Infolgedessen wird ein Auswahlprozess stattfinden. Die Bewerbung erfolgt über die Homepage des wbk (<http://www.wbk.kit.edu/studium-und-lehre.php>).

Die Vorlesung kann nur in Kombination mit der Lehrveranstaltung International Production Engineering B gehört werden.

Zur Vertiefung des im Rahmen der Lehrveranstaltung erworbenen Wissens werden die theoretischen Vorlesungseinheiten durch Praxiseinheiten im Umfeld der Karlsruher Forschungsfabrik (<https://www.karlsruher-forschungsfabrik.de>) unterstützt.

The theoretical lectures are complemented by practical lectures in the Karlsruhe Research Factory (<https://www.karlsruher-forschungsfabrik.de/en.html>) to deepen the acquired knowledge.

**Literature****Medien:**

Unterlagen zur Veranstaltung werden über (<https://ilias.studium.kit.edu/>) bereitgestellt.

**Introduction into Mechatronics**

2105011, WS 24/25, 3 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**Blended (On-Site/Online)**

**Content****Content:**

- Introduction
- Structure of mechatronic systems
- Mathematical treatment of mechatronic systems
- Sensors and actuators
- Measurements: acquisition and interpretation
- Modelling of mechatronic systems
- Control and feedback control systems
- Information processing

**Learning objectives:**

The student has knowledge about the specific challenge of interdisciplinary collaboration within the framework of mechatronics. He is able to explain the origin, necessity and methodic implementation of interdisciplinary collaboration, to name the main difficulties as well as the special features within the development of mechatronic products from the point of view of development methodic.

The student has fundamental knowledge of modeling mechanical, hydraulically and electrically part systems and about suitable optimization methods.

The student knows the difference in use of the term "system" in mechatronic and mechanical use.

**Introduction to Biomimetics**

2142151, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
On-Site

**Content**

Bionics focuses on the design of technical products following the example of nature. For this purpose we have to learn from nature and to understand its basic design rules. Therefore, the lecture focuses on the analysis of the fascinating effects used by many plants and animals. Possible implementations into technical products are discussed in the end.

The students should be able analyze, judge, plan and develop biomimetic strategies and products.

Basic knowledge in physics and chemistry

The successful attendance of the lecture is controlled by a written examination.

**Organizational issues**

Im ILIAS werden Materialien (Videos, Originalliteratur, Übungen) zur Vertiefung zur Verfügung gestellt.

Für die schriftliche Klausur werden zwei Termine angeboten (erste Woche nach Vorlesungsende im Sommersemester und eine Woche vor Vorlesungsbeginn im Wintersemester).

On-Site****Content**

In the practical training includes nine experiments:

1. X-ray optics
2. UVL + REM
3. Micromixer
4. Atomic force microscopy
5. 3D-Printing
6. Light diffraction at Chromium masks
7. Moulding
8. SAW-bio-sensors
9. Nano3D-printer - material transfer of thin foils
10. Electro spinning

Each student takes part in only four experiments.

The experiments are carried out at real workstations at the IMT and coached by IMT-staff.

**Organizational issues**

Das Praktikum findet in den Laboren des IMT am KIT-CN statt. Treffpunkt: Eingang Bau 301.

**Introduction to Nanotechnology**

2142152, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
On-Site

**Content**

Nanotechnology deals with the fabrication and analysis of nanostructures. The topics of the lecture include

- the most common measurement principles of nanotechnology especially scanning probe methods
- the analysis of physical and chemical properties of surfaces
- interatomic forces and their influence on nanostructures
- methods of micro- and nanofabrication and lithography
- basic models of contact mechanics and nanotribology
- important functional characteristics of nanodevices

Basic knowledge in mathematics and physics is assumed

The successful attendance of the lecture is controlled by a 30 minutes oral exam.

**Organizational issues**

Es werden im ILIAS Materialien (Videos, Originalliteratur, Übungen) zum Vertiefung zur Verfügung gestellt.

Für die mündlichen Prüfungen werden zwei Termine angeboten (erste Woche nach Vorlesungsende im Sommersemester und eine Woche vor Vorlesungsbeginn im Wintersemester).

**Literature**

Alle Folien und Originalliteratur werden auf ILIAS zur Verfügung gestellt.

## Introduction to Neutron Cross Section Theory and Nuclear Data Generation

2190490, SS 2025, 2 SWS, Language: German/English, [Open in study portal](#)

Lecture (V)  
On-Site

### Content

Cross section characterization

Summary of basic cross section theory

Resonance cross section

Doppler broadening

Scattering kernels

Basic of slowing down theory

Unit cell based XS data generation

Cross sections Data libraries

Data Measurements

The students:

- Understand the special importance of cross sections in various domains of natural science (Reactor physics, Material research, Solar radiation etc.)
- Are familiar with the theoretical methods and experimental effort to generate cross sections data.

Regular attendance: 26 h

self study: 94 h

oral exam about 30 min.

**Lecture (V)  
On-Site**

**Content**

This lecture is dedicated to students of mechanical engineering and other engineering Bachelor or Master degree courses. Goal of the lecture is the fundamental knowledge of nuclear energy and nuclear reactors. After the lecture the students understand the principle of the usage of nuclear energy, the structure and operation of nuclear power plants and nuclear safety measures. Furthermore, the students are capable of giving technical assessment of the usage of nuclear energy with respect to its safety and sustainability.

<b>V</b>	<p><b>Introduction to numerical fluid dynamics</b>                  2157444, WS 24/25, 2 SWS, Language: German, <a href="#">Open in study portal</a></p>	<p><b>Practical course (P)                  On-Site</b></p>
----------	--	---

**Content**

The lab gives an overview of the application of computational fluid dynamics (CFD). At the end of the course the students will be able to perform CFD calculations independently.

In the lab, the components of the cycle of computational fluid dynamics are worked through. In the first instance moderately complicated geometries will be generated and meshed. After the configuration and running the calculation, the results are presented and evaluated in a visualization software. While in the first part of the course these steps are worked out under guidance, calculation cycles are carried out independently in the second part. The test cases are discussed in detail and allow to strengthen the affinity to the fluid dynamics.

Content:

1. Brief introduction into Linux
2. Mesh generation with ICEMCFD
3. Data visualisation and interpretation with Tecplot
4. Handling of the flow solver SPARC
5. Self-designed calculation: flat plate
6. Introduction to unsteady calculations: flow around a circular cylinder

Regular attendance: 22,5 hours

Self-study: 97,5 hours

Lecture notes/handouts are offered.

Learning objectives:

Students

- know the three components of CFD: mesh generation, calculation and evaluation.
- will be able to create simple geometries and generate mesh.
- can set up and carry out simulations.
- know the ways of evaluating the results and the possibilities of flow visualization.
- know how to analyze flow situations.

**Competence Certificate**

written exam (90 min)

prerequisites: passing the corresponding "Tutorial to Introduction to the Finite element method" (T-MACH-110330)

**Prerequisites**

Passing the "Tutorial to Introduction to the Finite element method" (T-MACH-110330) is a prerequisite for taking part in the exam.

**Modeled Conditions**

The following conditions have to be fulfilled:

1. The course [T-MACH-110330 - Tutorial Introduction to the Finite Element Method](#) must have been passed.

**Annotation**

Knowledge of the contents of the courses "Continuum Mechanics of Solids and Fluids" and "Mathematical Methods of Continuum Mechanics" as well as the corresponding tutorials are expected

Due to capacity reasons it is possible that not all students of this course can be admitted to the computer tutorials. Students of the bachelor's degree program in mechanical engineering who have chosen the Major Field Continuum Mechanics (SP-Nr 13) will be admitted to the computer tutorials in any case.

If additional places are available in the computer tutorials for this course, these will be allocated according to the BSc average grade.

**Workload**

90 hours

**Content**

Following a brief introduction into continuum mechanics at small deformations, the classification into elastic, viscoelastic, plastic and viscoplastic constitutive models of solids is discussed. Then, one after the other, the four groups of elastic, viscoelastic, plastic and viscoplastic constitutive models are motivated and mathematically formulated. Their properties are demonstrated by means of elementary analytical solutions and examples.

The student can judge for a problem to be computed, which constitutive model should be selected depending on choice of material and loading. For computation tools such as commercial finite element codes, the students can understand the documentation with respect to the implemented constitutive models, and they can make their choice based on their knowledge. The students have basic knowledge for the development of constitutive laws.

Qualification: Engineering Mechanics; Advanced Mathematics

regular attendance: 22,5 hours

self-study: 97,5 hours

oral exam ca. 30 minutes

**Voraussetzungen: Recommendations:**

Basic studies and preliminary examination; basic lectures in automatic control

**Arbeitsaufwand (EN):** 120 hours

**Lernziele (EN):**

Powerful and cheap computation resources have led to major changes in the domain of measurement and control. Engineers in various fields are nowadays confronted with the application of computer-aided methods. This lab tries to give an insight into the modern domain of measurement and control by means of practically oriented and flexible experiments. Based on experiments

on measurement instrumentation and digital signal processing, elementary knowledge in the domain of visual inspection and image processing will be taught. Thereby, commonly used software like MATLAB/Simulink will be used in both simulation and realization of control loops. The lab closes with selected applications, like control of a robot or supersonic computer tomography.

### Praktikum Einsatz von Microcontrollern am Beispiel hochautomatisierter Schienenfahrzeuge Practical course (P) On-Site

2115925, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

### Content

#### Learning objectives

As part of the practical course, the basics of microcontroller programming are taught using examples from the field of highly automated rail vehicles.

The possibilities of programming microcontrollers and of interconnection with various sensors are demonstrated using self-built or extended experimental setups. The independent experiments focus on the decoding of sensor data for localization and environment recognition as well as the control of drive motors.

The practical course teaches the ability to independently develop and construct circuits consisting of several controllers and sensors.

#### Practical course content

1st date: Introduction to Matlab/Simulink

2nd date: Introduction to Raspberry Pi and Arduino

3rd date: Commissioning and wiring of microcontrollers

4th date: Integration of sensors and actuators

5th session: Drive control

6th date: Reading out complex sensor data

7th date: Setting up a highly automated system

2171487, WS 24/25, 3 SWS, Language: German/English, [Open in study portal](#)

**Practical course (P)  
On-Site**

**Content**

Online registration within the first two weeks of the lecture periode at: <http://www.its.kit.edu>

- Micro gas turbine
- Several test rigs for the investigation of heat transfer at thermally high loaded components
- Optimization of components of the internal air and oil system
- Characterization of spray nozzles
- Investigation of pollutant and noise emission as well as reliability and material deterioration
- Exhaust gas treatment
- Exhaust gas turbocharger
- Cooling Tower
- Heatpump
- Plant oil stove
- Heat capacity
- Wood combustion

regular attendance: 42h

self-study: 78h

Attending this course enables the students to:

- accomplish experimental and design related as well as theoretical tasks in a scientific background
- perform a correct evaluation of the obtained results
- adequately document and present their results in a scientific framework

1 report, approx. 12 pages

Discussion of the documented results with the assistants

2183640, WS 24/25, 3 SWS, Language: German, [Open in study portal](#)

**Practical course (P)**  
**Blended (On-Site/Online)**

**Content**

The laboratory comprises 8 half-day experiments, which address the following laser processing topics of metals, ceramics and polymers:

- safety aspects
- surface hardening and remelting
- melt and reactive cutting
- surface modification by dispersing or alloying
- welding
- surface texturing
- metrology

There are used CO<sub>2</sub>-, excimer-, Nd:YAG- and high power diode-laser sources within the laboratory.

The student

- can describe the influence of laser, material and process parameters and can choose suitable parameters for the most important methods of laser-based processing in automotive engineering.
- can explain the requirements for safe handling of laser radiation and for the design of safe laser systems.

Basic knowledge of physics, chemistry and material science is assumed.

The attendance to one of the courses Physical Basics of Laser Technology (2181612) or Laser Application in Automotive Engineering (2182642) is strongly recommended.

regular attendance: 34 hours

self-study: 86 hours

The assessment consists of a colloquium for every single experiment and an overall final colloquium incl. an oral presentation of 20 min.

**Laboratory Production Metrology**

2150550, SS 2025, 3 SWS, Language: German, [Open in study portal](#)

**Practical course (P)  
On-Site**

**Content**

During this course, students get to know measurement systems that are used in a production system. In the age of Industry 4.0, sensors are becoming more important. Therefore, the application of in-line measurement technology such as machine vision and non-destructive testing is focussed. Additionally, laboratory based measurement technologies such as computed tomography are addressed. The students learn the theoretical background as well as practical applications for industrial examples. The students use sensors by themselves during the course. Additionally, they are trained on how to integrate sensors in production processes and how to analyze measurement data with suitable software.

The following topics are addressed:

- Classification and examples for different measurement technologies in a production environment
- Machine vision with optical sensors
- Information fusion based on optical measurements
- Robot-based optical measurements
- Non-destructive testing by means of acoustic measurements
- Coordinate measurement technology
- Industrial computed tomography
- Measurement uncertainty evaluation
- Analysis of production data by means of data mining

**Learning Outcomes:**

The students ...

- are able to name, describe and mark out different measurement technologies that are relevant in a production environment.
- are able to conduct measurements with the presented in-line and laboratory based measurement systems.
- are able to analyze measurement results and assess the measurement uncertainty of these.
- are able to deduce whether a work piece fulfills quality relevant specifications by analysing measurement results.
- are able to use the presented measurement technologies for a new task.

**Workload:**

regular attendance: 31,5 hours

self-study: 88,5 hours

**On-Site**

**Content**

Based on a short description of the physical basics of laser technology the lecture reviews the most important high power lasers and their various applications in automotive engineering. Furthermore the application of laser light in metrology and safety aspects will be addressed.

- physical basics of laser technology
- laser beam sources (Nd:YAG-, CO<sub>2</sub>-, high power diode-laser)
- beam properties, guiding and shaping
- basics of materials processing with lasers
- laser applications in material processing
- safety aspects

**The student**

- can explain the principles of light generation, the conditions for light amplification as well as the basic structure and function of Nd:YAG-, CO<sub>2</sub>- and high power diode-laser sources.
- can describe the most important methods of laser-based processing in automotive engineering and illustrate the influence of laser, material and process parameters
- can analyse manufacturing problems and is able to choose a suitable laser source and process parameters.
- can explain the requirements for safe handling of laser radiation and for the design of safe laser systems.

Basic knowledge of physics, chemistry and material science is assumed.

It is not possible, to combine this lecture with the lecture *Physical basics of laser technology* [2181612].

regular attendance: 22,5 hours

self-study: 97,5 hours

oral examination (ca. 30 min)

no tools or reference materials

**Organizational issues**

Die Vorlesung ersetzt die bisherige Vorlesung "Lasereinsatz im Automobilbau" und wird jetzt auf Englisch angeboten!

The lecture replaces the previous lecture "Laser Application in Automotive Engineering" and is now offered in English!

V

**Learning Factory "Global Production"**

2149612, WS 24/25, 4 SWS, Language: German, [Open in study portal](#)

**Blended (On-Site/Online)**

**Content**

The learning factory "Global Production" serves as a modern teaching environment for the challenges of global production. To make this challenges come alive, students can run a production of electric motors under real production conditions.

The course is divided into e-learning units and presence dates. The e-learning units help to learn essential basics and to immerse themselves in specific topics (e.g. selection of location, supplier selection and planning of production networks). The focus of the presence appointments is the case-specific application of relevant methods for planning and control of production systems that are suitable for the location. In addition to traditional methods and tools to organize lean production systems (e.g. Kanban and JIT/ JIS, Line Balancing) the lecture in particular deals with site-specific quality assurance and scalable automation. Essential methods for quality assurance in complex production systems are taught and brought to practical experience by a Six Sigma project. In the area of scalable automation, it is important to find solutions for the adaption of the level of automation of the production system to the local production conditions (e.g. automated workpiece transport, integration of lightweight robots for process linking) and to implement them physically. At the same time safety concepts should be developed and implemented as enablers for human-robot collaboration.

The course also includes an excursion to the production plant for the manufacturing of electric motors of an industrial partner.

Main focus of the lecture:

- site selection
- site-specific factory planning
- site-specific quality assurance
- scalable automation
- supplier selection

**Learning Outcomes:**

The students are able to ...

- evaluate and select alternative locations using appropriate methods.
- use methods and tools of lean management to plan and manage production systems that are suitable for the location.
- use the Six Sigma method and apply goal-oriented process management.
- select an appropriate level of automation of the production units based on quantitative variables.
- make use of well-established methods for the evaluation and selection of suppliers.
- apply methods for planning a global production network depending on company-specific circumstances to sketch a suitable network and classify and evaluating it according to specific criteria.
- apply the learned methods and approaches with regard to problem solving in a global production environment and able to reflect their effectiveness.

**Workload:**

e-Learning: ~ 24 h

regular attendance: ~ 36 h

self-study: ~ 60 h

**Organizational issues**

Termine werden über die Institutshomepage bekanntgegeben.

Aus organisatorischen Gründen ist die Teilnehmerzahl für die Lehrveranstaltung auf 20 Teilnehmer begrenzt. Infolgedessen wird ein Auswahlprozess stattfinden. Die Bewerbung erfolgt über die Homepage des wbk (<http://www.wbk.kit.edu/studium-und-lehre.php>)

Aufgrund der begrenzten Teilnehmerzahl ist eine Voranmeldung erforderlich.

Die Studierenden sollten Vorkenntnisse in mindestens einem der folgenden Bereiche haben:

- Integrierte Produktionsplanung
- Globale Produktion und Logistik
- Qualitätsmanagement

## 11.242 Course: Lecture Series Supplementary Studies on Science, Technology and Society - Self Registration [T-FORUM-113578]

**Responsible:** Dr. Christine Mielke  
Christine Myglas

**Organisation:**

**Part of:** [M-FORUM-106753 - Supplementary Studies on Science, Technology and Society](#)

Type	Credits	Grading scale	Recurrence	Expansion	Version
Completed coursework	2	pass/fail	Each summer term	1 terms	1

### Competence Certificate

Active participation, learning protocols, if applicable.

### Prerequisites

None

### Self service assignment of supplementary studies

This course can be used for self service assignment of grade acquired from the following study providers:

- Studium Generale. Forum Wissenschaft und Gesellschaft (FORUM) (ehem. ZAK)
- FORUM (ehem. ZAK) Begleitstudium

### Recommendation

It is recommended that you complete the lecture series "Science in Society" before attending events in the advanced module and in parallel with attending the basic seminar.

If it is not possible to attend the lecture series and the basic seminar in the same semester, the lecture series can also be attended after attending the basic seminar.

However, attending events in the advanced module before attending the lecture series should be avoided.

### Annotation

The basic module consists of the lecture series "Science in Society" and the basic seminar. The lecture series is only offered during the summer semester.

The basic seminar can be attended in the summer or winter semester.

### Competence Certificate

oral exam (about 25 minutes)

### Prerequisites

T-MACH-114005 - Calculation, production and testing of fiber composite components - theory and practice must not be started.

### Recommendation

- Materials of Lightweight Construction
- Structural Analysis of Composite Laminates
- Composite Manufacturing - Polymers, Fibers, Semi-Finished Products, Manufacturing Technologies

### Workload

120 hours

Below you will find excerpts from events related to this course:

V

## Lightweight constructions with fiber-reinforced-polymers – theory and practice

Lecture / Practice (VÜ)  
On-Site

2113110, WS 24/25, 4 SWS, Language: German, [Open in study portal](#)

**Content**

The cooperative educational concept of the FAST-LB and IAM-WK give students an understanding of theory and practice for lightweight constructing with fiber-reinforced-polymers. Students solve an engineering lightweight task in small groups (max. 4 p.), for example the construction of an optimal bending beam under certain space and weight conditions. Various Materials (fibers, resins, foams, etc.) as well as relevant material data are provided and can be used any arbitrary combination. Mechanical properties of the semi-finished fiber products are to be determined by supervised tests on coupon samples. In a first step, students develop a theoretical solution and verify it simulative. Therefore, an introductory basic lecture teaches the mechanics and simulations techniques of fiber-reinforced-polymers. In a second step the students manufacture specimens based on their theoretical solution at the IAM-WK. The specimens are then tested on bending machines. The students gain knowledge about fiber-reinforced-polymers (materials, manufacturing, manufacturing effects, restrictions, etc.) and structural analysis simulations (modelling, simplifications, assumptions, material models, etc.) as well as material characterization and testing. Building on the basic lecture the knowledge is gained autonomously by solving realistic practice relevant tasks. The main topics are

- Fundamentals of lightweight strategies
- Basics of fiber-reinforced-polymers
- Basics of FEM simulation with anisotropic multi-material systems
- Independent development of suitable component concepts in teams of 4
- Independent development of simulation models for verification and design of own component concepts
- Calculation of anisotropic stiffness parameters from characterization tests
- Manufacturing of fiber-reinforced-polymers
- Mechanical testing

**Learning Objectives**

Students will be able to name and explain lightweight design strategies. They are familiar with typical fiber and matrix materials and their function in fiber composite materials. They will be familiar with the operating principle of a sandwich composite with foam core and will be able to describe and justify typical deformation and stress curves. They can name characteristic mechanical parameters and manufacturing processes. For the numerical analysis of FRP components, the students know simple laminate theories, they can set up a finite element model in Abaqus, select suitable finite elements, evaluate the simulation results and derive conclusions for improving the load-bearing effect. Students know the main steps and boundary conditions for manual fabrication and mechanical testing of fiber composite sandwich structures and can apply them in practice. They learn to work independently in teams on an open task, to elaborate the necessary boundary conditions and parameters and to obtain additional information where necessary.

**Lightweight Engineering Design**

2146190, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

General aspects of lightweight design, lightweight strategies, construction methods, design principles, lightweight construction, stiffening techniques, lightweight materials, virtual product engineering, bionics, joining techniques, validation, recycling

Additionally, guest speakers from industry will present lightweight design from an practical point of view.

The students are able to ...

- evaluate the potential of central lightweight strategies and their application in design processes.
- apply different stiffing methods qualitatively and to evaluate their effectiveness.
- evaluate the potential of computer-aided engineering as well as the related limits and influences on manufacturing.
- reflect the basics of lightweight construction from a system view in the context of the product engineering process.

**Organizational issues**

Vorlesungsfolien können über die eLearning-Plattform ILIAS bezogen werden.

Die Prüfungsart wird gemäß der Prüfungsordnung zu Vorlesungsbeginn angekündigt:

- Schriftliche Prüfung: 90 min Prüfungsdauer
- Mündliche Prüfung: 20 min Prüfungsdauer
- Erlaubte Hilfsmittel: keine

Medien: Beamer

Arbeitsbelastung:

- Präsenzzeit: 21 h
- Selbststudium: 99 h

Lecture slides are available via eLearning-Platform ILIAS.

The type of examination (written or oral) will be announced at the beginning of the lecture:

- written examination: 90 min duration
- oral examination: 20 min duration
- auxiliary means: None

Media: Beamer

Workload:

- regular attendance: 21 h
- self-study: 99 h

**Competence Certificate**

The assessment takes the form of an oral examination, usually lasting 15 minutes in accordance with Section 4 (2) No. 2 of the SPO.

It will be announced six weeks before the examination (§ 6 Para. 3 SPO) whether the performance assessment

- in the form of an oral examination in accordance with § 4 Para. 2 No. 2 SPO **or**
- in the form of a written examination in accordance with § 4 Para. 2 No. 1 SPO

will take place.

**Prerequisites**

None.

**Modeled Conditions**

The following conditions have to be fulfilled:

1. The course [T-INFO-114169 - Localization of Mobile Agents Pass](#) must have been started.

**Recommendation**

Basic knowledge of linear algebra and stochastics is helpful.

*Below you will find excerpts from events related to this course:*

## V

**Localization of Mobile Agents**

24613, SS 2025, 3 SWS, Language: German, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

This module provides a systematic introduction into the topic of localization methods. In order to facilitate understanding, the module is divided into four main topics. Dead reckoning treats the instantaneous determination of a vehicle's position based on dynamic parameters like velocity or steering angle. Localization with the help of measurements of known landmarks is part of static localization. In addition to the closed-form solutions for particular measurements (distances and angles), the least squares method for fusion arbitrary measurements is also introduced. Dynamic localization treats the combination of dead reckoning and static localization. The central part of the lecture is the derivation of the Kalman filter, which has been successfully applied in several practical applications. Finally, simultaneous localization and mapping (SLAM) is introduced, which allows localization in case of (partly) unknown landmark positions.

**Organizational issues**

Prüfungsterminvorschläge und das Verfahren dazu sind auf der Webseite der Vorlesung zu finden.

**Literature**

Grundlegende Kenntnisse der linearen Algebra und Stochastik sind hilfreich.

ST 2025	2118078	<a href="#">Logistics and Supply Chain Management</a>	4 SWS	Lecture / 	Furmans, Alicke

Legend:  Online,  Blended (On-Site/Online),  On-Site,  Cancelled

**Competence Certificate**

The success control takes place in the form of an examination performance of a different kind. This is composed as follows:

- 50% assessment of a written examination (60 min) during the semester break
- 50% assessment of an oral examination (20 min) during the semester break

To pass the examination, both examination performances must be passed.

**Prerequisites**

None

**Annotation**

The brick cannot be taken if one of the bricks "T-MACH-102089 – Logistics - Organisation, Design and Control of Logistic Systems" and "T-MACH-105181 – Supply Chain Management" has been taken.

**Workload**

270 hours

Below you will find excerpts from events related to this course:

V

**Logistics and Supply Chain Management**

2118078, SS 2025, 4 SWS, Language: English, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

In the lecture "Logistics and Supply Chain Management", comprehensive and well-founded fundamentals of crucial issues in logistics and supply chain management are presented. Furthermore, the interaction of different design elements of supply chains is emphasized. For this purpose, both qualitative and quantitative models are presented and applied. Additionally, methods for mapping and evaluating logistics systems and supply chains are described. The contents of the lecture are deepened in exercises and case studies and comprehension is partially reviewed in case studies. The contents will be illustrated, among other things, on the basis of supply chains in the automotive industry.

Among others, the following topics are covered:

- Inventory Management
- Forecasting
- Bullwhip Effect
- Supply Chain Segmentation and Collaboration
- Key Performance Indicators
- Supply Chain Risk Management
- Production Logistics
- Location Planning
- Route Planning

It is intended to provide an interactive format in which students can also contribute (and work alone or in groups). Since logistics and supply chain management requires working in an international environment and therefore many terms are derived from English, the lecture will be held in English.

Plenary: The plenary sessions take place on Mondays from 09:45 - 13:00 and from 14:00 - 17:15.

Exercises: There are a total of five exercise sessions, which take place on Thursdays from 14:00 to 15:30. The dates can be found in the schedule in Ilias.

Examination dates: This is a "Prüfungsleistung anderer Art", consisting of a written and an oral part. The written exam is planned on 14th August 2024 from 8:00 am to 9:00 am. The oral examinations are expected to take place the two weeks before, i.e. in calendar weeks 31 and 32. An oral examination lasts 20 minutes.

Contact person: In the summer semester 2024, the contact persons for organisational matters are Maximilian Barlang and Alexander Ernst. Please contact us at [log-scm@ifl.kit.edu](mailto:log-scm@ifl.kit.edu)

Lecture / Practice (VÜ)  
On-Site

**Content**

This lecture provides an overview of essential and current methods and concepts of Machine Learning for different robotic applications. It covers also their underlying mathematical and statistical methods. Important fundamental terminology, concepts and methods are presented for various topics including:

- Model selection, machine learning bias vs. parameter optimization
- Training, test, validation, generalization, overfitting, regularization
- Supervised vs unsupervised learning
- Regression
- Classifications
- Neural Networks
- Gaussian mixtures, Gaussian mixture regression

And other interesting topics

### Machine Tools and High-Precision Manufacturing Systems

2149910, WS 24/25, 6 SWS, Language: German, [Open in study portal](#)

Lecture / Practice (VÜ)  
On-Site

**Content**

The lecture gives an overview of the construction, use and application of machine tools and high-precision manufacturing systems. In the course of the lecture a well-founded and practice-oriented knowledge for the selection, design and evaluation of machine tools and high-precision manufacturing systems is conveyed. First, the main components of the systems are systematically explained and their design principles as well as the integral system design are discussed. Subsequently, the use and application of machine tools and high-precision manufacturing systems will be demonstrated using typical machine examples. Based on examples from current research and industrial applications, the latest developments are discussed, especially concerning the implementation of Industry 4.0 and artificial intelligence.

Guest lectures from industry round off the lecture with insights into practice.

The individual topics are:

- Structural components of dynamic manufacturing Systems
- Feed axes: High-precision positioning
- Spindles of cutting machine Tools
- Peripheral Equipment
- Machine control unit
- Metrological Evaluation
- Maintenance strategies and condition Monitoring
- Process Monitoring
- Development process for machine tools and high-precision manufacturing Systems
- Machine examples

**Learning Outcomes:**

The students ...

- are able to assess the use and application of machine tools and high-precision manufacturing systems and to differentiate between them in terms of their characteristics and design.
- can describe and discuss the essential elements of machine tools and high-precision manufacturing systems (frame, main spindle, feed axes, peripheral equipment, control unit).
- are able to select and dimension the essential components of machine tools and high-precision manufacturing systems.
- are capable of selecting and evaluating machine tools and high-precision manufacturing systems according to technical and economic criteria.

Lernziele (EN):

*Machine vision* (or *computer vision*) describes all kind of techniques that can be used to extract information from camera images in an automated way. Considerable improvements of machine vision techniques throughout recent years, e.g. by the advent of deep learning, have caused growing interest in these techniques and enabled applications in various domains, e.g. robotics, autonomous driving, gaming, production control, visual inspection, medicine, surveillance systems, and augmented reality.

The participants should gain an overview over the basic techniques in machine vision and obtain hands-on experience.

V

**Magnet Technology of Fusion Reactors**

2190496, SS 2025, 2 SWS, Language: German/English, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

In Greifswald/Germany the fusion experiment Wendelstein 7-X is now in operation to demonstrate the performance of Stellerator-type fusion machines. In south of France the fusion reactor ITER is under construction which will demonstrate the production of energy by fusion. In both machines the plasma inclusion will be ensured by magnets and to produce high magnetic fields in an efficient way, these magnets have to be superconducting. Design, construction and operation of such magnets is a technologic challenge because low temperature (4.5 K) and high currents (typ. 68 kA) are necessary.

The lecture will show basic principles for design and construction of such magnets and includes:

- Introduction with examples to nuclear fusion and to magnetic plasma confinement
- Basics of low temperature and high temperature properties and cryotechnique
- Material testing and critical material properties at low temperatures
- Principles of magnet design, construction and safe magnet operation
- Present status and magnet examples from fusion projects ITER, W7-X and JT-60SA
- Application of high temperature superconductors on fusion and power engineering

The goal of the lecture is to impart the fundamentals of construction of superconducting magnets. Magnet technology is inherently of multidisciplinary character e.g. material properties at low temperature, high voltage and high current technique. The use of superconductors is mandatory to reach highest magnetic fields with comparable small losses. Examples of magnets from power application, basic research and fusion reactor construction are discussed.

**Lecture Content:**

- Basics of nuclear fusion and design aspects of fusion magnets
- Superconductors - basics and stability
- Low temperature cryogenic aspects
- Low temperature and high temperature superconductors
- Cryogenic material testing and properties of fusion materials at low temperatures
- Quench and high voltage aspects for magnets
- Status and magnets of fusion machines ITER, W7-X, JT-60SA & future DEMO
- Impact of high temperature superconductors on fusion and power engineering

Educational objective: The students know:

- Magnetic plasma confinement principles in connection with fusion machine
- Examples and basic properties of different superconductors
- Basics of formation of superconducting cables and magnet construction
- Generation of low temperature, cryostat construction
- Basics of magnet design and magnet safety
- Material testing and material properties at low temperatures
- High-temperature superconductor use in magnet construction and power application

**Recommendations:**

Knowledge in energy technology, power plants, material testing is welcomed

- Time of attendance: 2 SWS, Other: excursion, etc. 5 hours
- Self-study: preparation and postprocessing LV (course): 1 hour / week
- Preparation for the examination: 80 hours per semester

Oral examination of about 30 minutes

**Content**

The objective of the lecture is to look at manufacturing technology within the wider context of production engineering, to provide an overview of the different manufacturing processes and to impart detailed process knowledge of the common processes. The lecture covers the basic principles of manufacturing technology and deals with the manufacturing processes according to their classification into main groups regarding technical and economic aspects. The lecture is completed with topics such as process chains in manufacturing.

The following topics will be covered:

- Quality control
- Primary processing (casting, plastics engineering, sintering, additive manufacturing processes)
- Forming (sheet-metal forming, massive forming, plastics engineering)
- Cutting (machining with geometrically defined and geometrically undefined cutting edges, separating, abrading)
- Joining
- Coating
- Heat treatment and surface treatment
- Process chains in manufacturing

This lecture provides an excursion to an industry company.

**Learning Outcomes:**

The students ...

- are capable to specify the different manufacturing processes and to explain their functions.
- are able to classify the manufacturing processes by their general structure and functionality according to the specific main groups.
- have the ability to perform a process selection based on their specific characteristics.
- are enabled to identify correlations between different processes and to select a process regarding possible applications.
- are qualified to evaluate different processes regarding specific applications based on technical and economic aspects.
- are experienced to classify manufacturing processes in a process chain and to evaluate their specific influence on surface integrity of workpieces regarding the entire process chain.

**Workload:**

regular attendance: 63 hours

self-study: 177 hours

**Organizational issues**

Vorlesungstermine montags und dienstags, Übungstermine mittwochs.

Bekanntgabe der konkreten Übungstermine erfolgt in der ersten Vorlesung.

Die LV wird letztmalig im WS 2024/25 angeboten (Vorlesungsvideos bleiben online).

Die Prüfung wird für Erstsreiberer letztmalig im SS 2025 und Wiederholer letztmalig im WS 2025/26 angeboten.

**Literature****Medien:**

Skript zur Veranstaltung wird über ilias (<https://ilias.studium.kit.edu/>) bereitgestellt.

**Media:**

Lecture notes will be provided in ilias (<https://ilias.studium.kit.edu/>).

## T

**11.257 Course: Master's Thesis [T-MACH-105299]**

**Responsible:** Prof. Dr.-Ing. Martin Heilmaier  
**Organisation:** KIT Department of Mechanical Engineering  
**Part of:** [M-MACH-102858 - Master's Thesis](#)

Type	Credits	Grading scale	Recurrence	Version
Final Thesis	30	Grade to a third	Each term	1

**Competence Certificate**

The master thesis is designed to show that the student is able to deal with a problem of his/her subject area in an independent manner and within the given period of time using scientific methods.

The maximal processing time of the master thesis takes three months. With consent of the examiner the thesis can be written in another language than German as well. The date of issue of the subject has to be fixed by the supervisor and the student and to be put on record at the examination board. The subject of the master thesis may be only returned once and only within the first month of processing time.

On a reasoned request of the student, the examination board can extend the processing time by up to one month. If the master thesis is not completed in time, this examination is "failed" (5,0), unless the student is not responsible.

The master thesis is to be evaluated by not less than a professor or a senior scientist according to § 14 Abs. 3 Ziff. 1 KITG and another examiner. Generally, one of the two examiners is the person who has assigned the thesis. If the examiners do not agree, the master thesis is graded by the examination board within this assessment; another expert can be appointed too. The master thesis has to be graded within a period of six weeks after the submission.

**Prerequisites**

The requirement for admission to the master thesis module are 74 ECTS. As to exceptions, the examination board decides on a request of the student (see § 14 (1) SPO).

**Modeled Conditions**

The following conditions have to be fulfilled:

1. You need to have earned at least 74 credits in the following fields:
  - Advanced Engineering Fundamentals
  - Specialization

**Final Thesis**

This course represents a final thesis. The following periods have been supplied:

<b>Submission deadline</b>	6 months
<b>Maximum extension period</b>	3 months
<b>Correction period</b>	6 weeks

**Workload**

900 hours

T

**11.258 Course: Materials Characterization [T-MACH-107684]**

V

**Materials Characterization**

2174586, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

The following methods will be introduced within this lecture:

- microscopic methods: optical microscopy, electron microscopy (SEM/TEM), atomic force microscopy
- material and microstructure analyses by means of X-ray, neutron and electron beams
- analysis methods at SEM/TEM (e.g. EELS)
- spectroscopic methods (e.g. EDS / WDS)

**learning objectives:**

The students have fundamental knowledge about methods of material analysis. They have a basic understanding to transfer this fundamental knowledge on problems in engineering science. Furthermore, the students have the ability to describe technical material by its microscopic and submicroscopic structure.

**Literature**

Vorlesungsskript (wird zu Beginn der Veranstaltung ausgegeben).

Literatur wird zu Beginn der Veranstaltung bekanntgegeben.

**Materials of Lightweight Construction**

2174574, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

Introduction

Constructive, production-oriented and material aspects of lightweight construction

Aluminium-based alloys

Aluminium wrought alloys

Aluminium cast alloys

Magnesium-based alloys

Magnesium wrought alloys

Magnesium cast alloys

Titanium-based alloys

Titanium wrought alloys

Titanium cast alloys

High-strength steels

High-strength structural steels,

Heat-treatable steels, press-hardening and hardenable steels

Composites - mainly PMC

Matrices

Reinforcements

Basic mechanical principles of composites

Hybrid composites

Special materials for lightweight design

Beryllium alloys

Metallic Glasses

Applications

**learning objectives:**

The students are capable to name different lightweight materials and can describe their composition, properties and fields of application. They can describe the hardening mechanisms of lightweight materials and can transfer this knowledge to applied problems.

The students can apply basic mechanical models of composites and can depict differences in the mechanical properties depending on composition and structure. The students can describe the basic principle of hybrid material concepts and can judge their advantages in comparison to bulk materials. The students can name special materials for lightweight design and depict differences to conventional materials. The students have the ability to present applications for different lightweight materials and can balance reasons for their use.

**requirements:**

Werkstoffkunde I/II (recommended)

**workload:**

The workload for the lecture "Materials for Lightweight Construction" is 120 h per semester and consists of the presence during the lectures (24 h), preparation and rework time at home (48 h) and preparation time for the oral exam (48 h).

**Examination:**

Oral examination, Duration approx. 25 min

**Literature**

Literaturhinweise, Unterlagen und Teilmanuskript in der Vorlesung

**Materials Recycling and Sustainability**

2173520, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

The lecture series is organised in two main topics: On the one hand, fundamentals of sustainability are explained and it is shown how to tread more sustainable paths in materials science and mechanical engineering. On the other hand, separation and recycling processes for all common classes of materials are presented and discussed. It is shown how recycling fosters a holistic and sustainable perspective on material processing and use.

1. legal bases and historical background
2. climate change, ecology and material flows
3. sustainability in general
4. product responsibility, recyclable design and planned obsolescence
5. general and legal bases of recycling
6. material separation, sorting and processing
7. recycling of metals
8. recycling of polymers and composites
9. recycling of everyday materials
10. alternative materials and alternative design concepts
11. materials for renewable energy sources

**On-Site**

**Content**

Properties of pure iron; thermodynamic foundations of single-component and of binary systems; nucleation and growth; diffusion processes in crystalline iron; the phase diagram Fe-Fe<sub>3</sub>C; effects of alloying on Fe-C-alloys; nonequilibrium microstructures; multicomponent iron-based alloys; heat treatment technology; hardenability and hardenability tests.

**learning objectives:**

The students are familiar with the thermodynamic foundations of phase transformations, the kinetics of phase transformations in the solid states (nucleation and growth phenomena), the mechanisms of microstructure formation and microstructure-property relationships and can apply them to metallic materials. They can assess the effects of heat treatments and of alloying on the microstructure and the properties of iron-based materials (steels in particular). They can select steels for structural applications in mechanical engineering and subject them to appropriate heat treatments.

**Mathematical Methods in Dynamics**

2161206, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)  
Online**

**Content**

The students know precisely the mathematical methods of dynamics. They are able to use the basic mathematical methods for modelling the dynamical behaviour of elastic and rigid bodies. The students also have a basic understanding of the description of kinematics and kinetics of bodies. They also master the alternative formulations based on weak formulations and variational methods and the approximate solution methods for numerical calculations of the moving behaviour of elastic bodies.

Dynamics of continua:

Concept of continuum, geometry of continua, kinematics and kinetics of continua

Variational principles:

Principle of virtual work, variational calculations, Principle of Hamilton

Approximate solution methods:

Methods of weighted residuals, method of Ritz

**Organizational issues**

**Mathematical Methods in Fluid Mechanics**

2154540, SS 2025, 4 SWS, Language: English, [Open in study portal](#)

Lecture / Practice (VÜ)  
On-Site

**Content**

The students can simplify the Navier-Stokes equations for specific flow problems. They are able to employ mathematical methods in fluid mechanics effectively in order to solve the resulting governing equations analytically, if possible, or to enable simpler numerical solution of the problem. The students can describe the limits of applicability of the assumptions made to model the flow behavior.

The lecture will cover a selection of the following topics:

- Creeping flows (Stokes flow)
- Lubrication theory
- Potential flow theory
- Boundary-layer theory
- Laminar-turbulent transition (linear stability theory)
- Turbulent flows

V

## Mathematical models and methods for Production Systems

2117059, WS 24/25, 4 SWS, Language: English, [Open in study portal](#)

Lecture / Practice (VÜ)  
On-Site

**Content****Media:**

black board, lecture notes, presentations

**Learning Content:**

- single server systems:  $M/M/1$ ,  $M/G/1$ : priority rules, model of failures
- networks: open and closed approximations, exact solutions and approximations
- application to flexible manufacturing systems, AGV (automated guided vehicles) - systems
- modeling of control approaches like constant work in process (ConWIP) or kanban
- discrete-time modeling of queuing systems

**Learning Goals:**

Students are able to:

- Describe queueing systems with analytical solvable stochastic models,
- Derive approaches for modeling and controlling material flow and production systems based on models of queueing theory,
- Use simulation and exact methods.

**Recommendations:**

- Basic knowledge of statistic
- recommended compulsory optional subject: Stochastics
- recommended lecture: Materials flow in logistic systems (also parallel)

**Workload:**

regular attendance: 42 hours

self-study: 198 hours

**Organizational issues**

- **Im Wintersemester 2024/2025 ist die Veranstaltung auf maximal 30 Teilnehmer beschränkt.**
- **Die Anmeldung erfolgt durch Beitritt zum ILIAS-Kurs und Ausfüllen des Anmeldeformulars (erforderliche Felder beim Beitritt zum ILIAS-Kurs).**
- **Die Anmeldung ist vom 01.09.2024 bis zum 30.09.2024 möglich. Die verfügbaren Plätze werden anschließend vergeben.**

**Die nächste Veranstaltung findet im Sommersemester 2026 statt!**

V

**Probabilistic Measurement and Estimation**2138334, SS 2025, 3 SWS, Language: German, [Open in study portal](#)Lecture (V)  
On-Site

**Content****Lerninhalt (EN)**

1. Amplifiers
2. Digital technology
3. Stochastic modeling for measurement applications
4. Estimation
5. Kalman Filter
6. Environmental perception

**Lernziele (EN):**

The capabilities of modern sensor technology pave the way for novel applications in engineering. Especially digital measurement techniques may be used even in very complex environments and thus have strong impact on technological progress. Stochastic models of measurement processes form the basis for meaningful information processing and provide a valuable tool for engineering. This interdisciplinary lecture addresses students in mechanical engineering and related subjects. The lecture gives an overview of digital technology and stochastics. These areas form the basics of estimation methods that can be embedded elegantly in the theory of state observers. Applications in signal processing for modern environmental perception (video, Lidar, Radar) illustrate the discussed subjects.

**Nachweis:**

Written exam

60 minutes

Individual sheet of formulas

**Arbeitsaufwand:**

In total 120h:

Attendance time: 20 h

Self-study: 100 h

**Literature**

Skript und Foliensatz zur Veranstaltung werden als kostenlose pdf-Dateien bereitgestellt. Weitere Empfehlungen werden in der Vorlesung bekannt gegeben.

Idealerweise haben Sie zuvor 'Grundlagen der Mess- und Regelungstechnik' gehört oder verfügen aus einer Vorlesung anderer Fakultäten über grundlegende Kenntnisse der Mess- und Regelungstechnik und der Systemtheorie.

Oral exam, about 25 minutes

**Prerequisites**

none

**Recommendation**

Basic knowledge in materials science (e.g. lecture materials science I and II)

**Workload**

120 hours

*Below you will find excerpts from events related to this course:*

V

**Mechanics and Strengths of Polymers**2173580, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)**Lecture (V)  
On-Site****Content**

Molecular structure and morphology of polymers, temperature- and time dependency of mechanical behavior, viscoelasticity, time/temperature- superposition principle, yielding, crazing and fracture of polymers, failure criterions, impact and dynamic loading, corresponding principle, tough/brittle-transition, introduction to the principles of fiber reinforcement and multiple cracking in composites

**learning objectives:**

The students are prepared to

- repeat the calculus on strength and design of engineering parts exposed to complex loadings,
- estimate the influence of time and temperature on the strength of polymeric materials,
- relate the strength of materials to their molecular structure, morphology and processing parameters and
- derive failure mechanisms for homogenous polymers and composite materials therefrom.

**requirements:**

basic knowledge in materials science (e.g. lecture materials science I and II)

**workload:**

The workload for the lecture Mechanics and Strengths of Polymers is 120 h per semester and consists of the presence during the lecture (28 h) as well as preparation and rework time at home (92 h).

**Competence Certificate**  
Oral examination, ca. 30 min

**Prerequisites**  
none

**Workload**  
120 hours

*Below you will find excerpts from events related to this course:*

V

**Mechanics in Microtechnology**

2181710, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

1. Introduction: Application and Processing of Microsystems
2. Scaling Effects
3. Fundamentals: Stress and Strain, (anisotropic) Hooke's Law
4. Fundamentals: Mechanics of Beams and Membranes
5. Thin Film Mechanics: Origin and Role of Mechanical Stresses
6. Characterization of Mechanical Properties of Thin Films and Small Structures: Measurement of Stresses and Mechanical Parameters such as Young's Modulus and Yield Strength; Thin Film Adhesion and Stiction
7. Transduction: Piezo-resistivity, Piezo-electric Effect, Electrostatics,...
8. Actuation: Inverse Piezo-electric Effect, Shape Memory, Electromagnetic Actuation,...

The students know and understand size and scaling effects in micro- and nanosystems. They understand the impact of mechanical phenomena in small dimensions. Based on this they can judge how they determine material processing as well as working principles and design of microsensors and microactuators.

regular attendance: 22,5 hours

**Competence Certificate**

The assessment takes place in the form of a written examination lasting 120 min. and 120 points.

The module grade is the grade of the written exam.

Bonus points can also be awarded for a student presentation within the lecture. Bonus points are awarded as follows:

- solving bonus tasks is voluntary.
- students register in ILIAS in groups of max. 3 participants for a bonus task.
- the solution to the bonus task must be entered in ILIAS by the specified submission deadline.
- the solutions are read by the lecture assistants and, if necessary, corrected and approved.
- the groups present their solutions in the lecture (20 min).
- the bonus points are awarded individually to each student by the lecturer on the basis of the written solution and the presentation.
- Each student can earn a maximum of 6 bonus points.
- Bonus points can only be earned once.

The bonus points are credited as follows:

- A maximum of 6 points can be credited to the exam result for the passed bonus task.
- The grade can thus be improved by a maximum of one grade step.
- The total number of points remains limited to 120 points. The bonus points are only taken into account if the exam is passed. Bonus points do not expire and are retained for any examinations taken at a later date.

*Below you will find excerpts from events related to this course:*

V

**Metal Forming**

2150681, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

At the beginning of the lecture the basics of metal forming are briefly introduced. The focus of the lecture is on massive forming (forging, extrusion, rolling) and sheet forming (car body forming, deep drawing, stretch drawing). This includes the systematic treatment of the appropriate metal forming Machines and the corresponding tool technology. Aspects of tribology, as well as basics in material science and aspects of production planning are also discussed briefly. The plastic theory is presented to the extent necessary in order to present the numerical simulation method and the FEM computation of forming processes or tool design. The lecture will be completed by product samples from the forming technology.

The topics are as follows:

- Introduction and basics
- Hot forming
- Metal forming machines
- Tools
- Metallographic fundamentals
- Plastic theory
- Tribology
- Sheet forming
- Extrusion
- Numerical simulation

**Learning Outcomes:**

The students ...

- are able to reflect the basics, forming processes, tools, Machines and equipment of metal forming in an integrated and systematic way.
- are capable to illustrate the differences between the forming processes, tools, machines and equipment with concrete examples and are qualified to analyze and assess them in terms of their suitability for the particular application.
- are also able to transfer and apply the acquired knowledge to other metal forming problems.

**Workload:**

regular attendance: 21 hours

self-study: 99 hours

**Organizational issues**

Vorlesungstermine freitags, wöchentlich.

Die konkreten Termine werden in der ersten Vorlesung bekannt gegeben und auf der Institutshomepage und ILIAS veröffentlicht.

Zur Vertiefung des im Rahmen der Lehrveranstaltung erworbenen Wissens werden die theoretischen Vorlesungseinheiten durch Praxiseinheiten im Umfeld der Karlsruher Forschungsfabrik (<https://www.karlsruher-forschungsfabrik.de>) unterstützt.

The theoretical lectures are complemented by practical lectures in the Karlsruhe Research Factory (<https://www.karlsruher-forschungsfabrik.de/en.html>) to deepen the acquired knowledge.

**Literature****Medien:**

Skript zur Veranstaltung wird über (<https://ilias.studium.kit.edu/>) bereitgestellt.

**Media:**

Lecture notes will be provided in Ilias (<https://ilias.studium.kit.edu/>)

*Below you will find excerpts from events related to this course:*

V

**Metallographic Lab Class**

2175590, WS 24/25, 3 SWS, Language: German, [Open in study portal](#)

**Practical course (P)  
On-Site**

**Content**

The lab course deals with the practical application of metallographic procedures, e.g. starting from sample extraction to light optical (LOM) and scanning electron microscopy (SEM). The preparation of metallographic samples takes up to two lab days. LOM and SEM analyses are performed on another two days. All results are carefully registered by the students and discussed in a separate session. Finally, the students can independently apply their theoretical and practical knowledge by the preparation and analysis of industrial relevant metallic materials. The content of the lab course will be documented in the form of individual protocols by the students.

Before starting with the lab course, the students need to prepare the fundamentals that are tested in an online test. Lecture notes as starting point are provided.

**Learning objectives:**

The students can perform standard metallographic preparation routines as well as qualitative and quantitative microstructure analysis. The students are able to interpret microstructures and the correlations of microstructural constituent and processing and properties of metallic materials.

**Prerequisites:**

Materials Science and Engineering I and II or Materials Physics und Metals

**Arbeitsaufwand:**

on-site: 25 h

private studies: 95 h

**Literature**

none

### Workload

180 hours

Below you will find excerpts from events related to this course:

### Metals

2174598, SS 2025, 4 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

### Content

Properties of pure elements; thermodynamic foundations of single-component and of binary systems, as well as multiphase systems; nucleation and growth; diffusion processes in crystalline materials; phase diagrams; effects of alloying; nonequilibrium microstructures; heat treatment technology

### learning objectives:

The students are familiar with the thermodynamic foundations of phase transformations, the kinetics of phase transformations in the solid state, the mechanisms of microstructure formation and microstructure-property relationships and can apply them to metallic materials. They can assess the effects of heat treatments and of alloying on the microstructure and the mechanical and physical properties of metallic materials. This competence is in particular deepened for iron- and aluminum-based alloys.

### requirements:

Materials physics

### workload:

Regular attendance: 42 h

Self-study: 138 h

## Methods and Processes of PGE – Product Generation Engineering

2146176, SS 2025, 4 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

**Content****Note:**

This lecture is the basis for the main subject Integrated Product Development, which is offered as a specialisation.

**Recommendations:**

none

**Workload:**

regular attendance: 39 h

self-study: 141 h

**Examination:**

Written exam

Duration: 120 minutes (+10 minutes reading time)

Auxiliaries:

- Calculator
- German dictionary (books only)

**Course content:**

Basics of Product Development: Basic Terms, Classification of the Product

Development into the industrial environment, generation of costs / responsibility for costs

Concept Development: List of demands / Abstraction of the Problem Definition / Creativity Techniques / Evaluation and selection of solutions

Drafting : Prevailing basic rules of Design / Design Principles as a problem oriented accessory

Rationalization within the Product Development: Basics of Development

Management/ Simultaneous Engineering and Integrated Product Development/Development of Product Lines and Modular Construction Systems

Quality Assurance in early Development Phases : Methods of Quality Assurance in an overview/QFD/FMEA

**Learning objectives:**

The students are able to ...

- classify product development in companies and differentiate between different types of product development.
- name the relevant influencing factors of a market for product development.
- name, compare and use the central methods and process models of product development within moderate complex technical systems.
- explain problem solving techniques and associated development methods.
- explain product profiles and to differentiate and choose suitable creative techniques of solution/idea generation finding on this basis.
- use design guidelines to create simple technical systems and to explain these guidelines.
- name and compare quality assurance methods; to choose and use suitable methods for particular applications.
- explain the different methods of design of experiment.
- explain the costs in development process.

V

**Microscale Fluid Mechanics**

2153451, SS 2025, 2 SWS, Language: English, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

The lecture covers microfluidic phenomena, particularly Stokes flow and electrical phenomena that occur in fluids. Understanding the mentioned effects is crucial for the development of microfluidic systems or fuel cells. With the application fields of those technologies ranging from research in life sciences to renewable energy production. The basic operations performed in microsystems are particle separation and mixing, chemical analyses, characterization of biological samples, and cell capturing. Multiphase microscale phenomena occur in those systems as well as in the porous layer of fuel cells.

The lecture gives an overview of the basic physics, i.e., Stokes flow, analysis of hydraulic circuits, surface tension effects, transport of passive scalars, electroosmosis and electrophoresis, structure of the electric double layer, electrokinetics, the Taylor-Melcher model for the description of droplets under the influence of an electric field.

Phenomena with electric boundary layers are discussed using asymptotic methods that are introduced in the lecture. A basic understanding of fluid mechanics and differential equations is required.

After this course, the participants can

- (1) identify microfluidic and/or electrochemical problems
- (2) describe those phenomena with the respective terminology and classify them as either Stokes flow, electrohydrodynamic or electrokinetic
- (3) recognize and apply the appropriate modeling approaches and solution methods
- (4) analyze the multiphysical and multiscale behavior and discuss the influence of different effects, such as electric forces, surface tension or electric boundary layers
- (5) assess the importance of these effects in the context of biological phenomena and evaluate design choices in devices with microfluidic effects.

V

**Microstructure-Property-Relationships**

2178124, SS 2025, 3 SWS, Language: German, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

The following microstructure-property-relationships will be discussed for all material classes:

- Elasticity and plasticity
- Fracture mechanics
- Fatigue
- Creep
- Elektrical conductivity: Metallic conductors, semiconductors, superconductors, conductive polymers
- Magnetic propeties und materials

In addition to the phenomenological description and physical explanation of the material properties an overview on the corresponding experimental techniques will be given.

The students fundamentally understand the interrelation between the microstructure and the properties of a material. This interrelation will be elaborated for mechanical properties (elasticity, plasticity, fracture, fatigue, creep) as well as functional properties (conductivity, magnetic properties) for all material classes, respectively. The students are able to phenomenological describe the material properties, to explain the underlying physical mechanisms and to understand how the properties can be specifically modified by the microstructure of the material. In the other way they are able to deduce the mechanical and functional properties of a material on the basis of its microstructure.

oral exam ca. 30 minutes

### Competence Certificate

The class is a laboratory course that is taken in groups, hence the active and productive participation in the team effort is evaluated. To check the individual performance, there will be weekly discussions about the project. To evaluate each group's progress, there will be 2 presentation during the duration of the course. The final mark is determined from the marks obtained in the presentation and an oral group examination of 1 hour.

### Prerequisites

T-MACH-114218 must not have been started.

### Workload

120 hours

Below you will find excerpts from events related to this course:

### Microsystem product design for young entrepreneurs

2141503, SS 2025, 4 SWS, Language: German/English, [Open in study portal](#)

**Practical course (P)**  
**Blended (On-Site/Online)**

### Content

This event is all about developing your own product as a team and perhaps even founding your own company. Many successful products are manageable in their complexity and can therefore also be developed by small start-ups without a large development department. What is more important is that they meet the current spirit and make customers' lives better. Examples of this are products such as the fascia roll (very expensive construction foam) or the stitch healer Heat-it (a clever heater). The latter was developed as part of this course.

The aim of the course is for you to come together as a team and jointly design a product that fits to this team. In the course of a semester, the first prototypes are then built and possible market opportunities evaluated. Starting a company is difficult to plan and it always helps to get external feedback, which is why many teams then take part in the VDE's Cosima student competition (cosima-mems.de), where they can measure their product against that of other teams.

You can come to the event as a team or find other team members here, but since teams (3-5 people) are always needed, it would be great if you could send me an e-mail ([dario.mager@kit.edu](mailto:dario.mager@kit.edu)) up to one week before the start of the lecture to let me know that you are interested in the event.

### Organizational issues

Die Veranstaltung beginnt erst in der 2ten Vorlesungswoche (30.4.) bitte schicken Sie mir aber bei Interesse davor eine unverbindliche E-Mail an [dario.mager@kit.edu](mailto:dario.mager@kit.edu) das erleichtert mir die Planung der Veranstaltung.

**Competence Certificate**

The assessment consists of an oral exam (45 min) taking place in the recess period. The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

**Prerequisites**

none

**Recommendation**

Knowledge in Fluid Power Systems is required. It is recommended to attend the course *Fluid Power Systems* [2114093] beforehand.

**Annotation****Learning objectives:**

After successful participation in the course:

- the student will be able to name the wide range of mobile machinery
- know the possible applications and operating sequences of the most important mobile machines
- be able to describe selected subsystems and components

Content:

- Presentation of the components used and the most important mobile machines
- Basics and structure of the machines
- Practical insights into the development of the machines

Media:

Downloadable set of slides for the lecture

Book "Grundlagen mobiler Arbeitsmaschinen", Karlsruhe series of publications on vehicle systems technology, Volume 22, KIT Scientific Publishing

## Reduction methods for the modeling and the simulation of combustion processes

Lecture (V)  
On-Site

2166540, SS 2025, 2 SWS, Language: German/English, [Open in study portal](#)

### Content

The course concerns the problem of model reduction to save CPU time for integrations and simulations of chemical kinetic models of reacting flows. The principles of model reduction will be outlined. The basic mathematical concepts and methods of analysis of chemical reaction mechanisms will be introduced. The framework and detailed implementation scheme of model reduction will be introduced. The course will cover simplified and idealized models and examples in system biology of biochemical as well as combustion processes. These will be introduced, analyzed and reduced. The theoretical and numerical tools will be combined, implemented and illustrated by using these simple examples.

### Organizational issues

Termin: Mi, 14:00-15:30. Für Änderungen siehe Aushang im ITT-Schaukasten und auf der Internetseite des Instituts.

V

**Modelling of polymer and suspension flows for industrial manufacturing processes**

Lecture (V)  
On-Site

2114105, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Content**

The lecture deals with the behaviour of (fibre-reinforced) polymers in the molten state and in the context of industrially relevant manufacturing processes. The manufacturing process of fibre composite components has a significant influence on the subsequent component behaviour. Accordingly, it is just as important to be able to map the material behaviour during production as the subsequent component behaviour. To this end, the lecture deals with modelling the viscosity and flow of polymers (with and without fibres). The basics of numerical simulation of flows are taught and advanced models for the description of certain manufacturing processes are explained. Correspondingly, important advantages and disadvantages of different manufacturing processes and their respective modelling approaches are taught. At the end of the lecture, students will be able to select suitable modelling approaches for specific processes and to mathematically describe the behaviour of polymers in the molten state.

Lecture / Practice (VÜ)  
On-Site

**Content**

The course gives an introduction to modelling and simulation techniques.

The following topics are included:

- splines, interpolation methods, Taylor series
- finite difference method
- dynamical systems
- numerics of partial differential equations
- mass and heat diffusion
- microstructure simulation
- parallel and adaptive algorithms
- high performance computing
- practical exercises

The student can

- explain the basic algorithms and numerical methods which are beside other applications relevant for materials simulations.
- describe and apply numerical solution methods for partial differential equations and dynamical systems
- apply numerical methods to solve heat and mass diffusion problems which can also be used to model microstructure formation processes
- has experiences in how to implement and program the introduced numerical methods from an integrated computer lab.

preliminary knowledge in mathematics, physics and materials science recommended

regular attendance: 22,5 hours lecture, 11,5 hours exercises

self-study: 116 hours

We regularly hand out exercise sheets. In addition, the course will be accompanied by practical exercises at the computer.

written examination: 90 minutes

**Organizational issues**

Achtung: RAUMÄNDERUNG im Vergleich zum Vorlesungsverzeichnis! Der aktuelle Raum für die Vorlesung ist 311, Gebäude E, Moltkestr. 30 in Karlsruhe

Genauere Termine der Vorlesung:

22.10.2024 11:30 – 13:00  
 29.10.2024 11:30 - 13:00  
 05.11.2024 11:30 - 13:00  
 12.11.2024 11:30 - 13:00  
 19.11.2024 11:30 - 13:00  
 26.11.2024 11:30 - 13:00  
 03.12.2024 11:30 - 13:00  
 10.12.2024 11:30 - 13:00  
 17.12.2024 11:30 - 13:00  
 07.01.2025 11:30 - 13:00  
 14.01.2025 11:30 - 13:00  
 21.01.2024 11:30 - 13:00

Im Gegensatz zu Angaben im Vorlesungsverzeichnis finden dienstags 13:15 - 14:00 KEINE Vorlesungssitzungen statt.

Genauere Termine des Computerpraktikums in PRÄSENZ an ausgewählten Montagen 17:30-20:00 (in Geb. 20.21 Pool C)

11.11.2024  
 25.11.2024  
 09.12.2024  
 16.12.2024  
 20.01.2025

Im Gegensatz zu Angaben im Vorlesungsverzeichnis gibt es nur fünf Computerpraktikumstermine.

**Modelling of Microstructures**

2183702, WS 24/25, 3 SWS, Language: German, [Open in study portal](#)

Lecture / Practice (VÜ)  
On-Site

**Content**

- Brief Introduction in thermodynamics
- Gibbs free energy and phase diagrams
- Free energy functional
- Phasefield equation
- Driving forces
- Grand chemical potential functional and the evolution equations
- Numeric solution of the phasefield equation

## The student can

- explain the thermodynamic and statistical foundations for liquid-solid and solid-solid phase transition processes and apply them to construct phase diagrams.
- explain the mechanisms of phase boundary motion induced under driving forces
- use the phase-field method for simulation of microstructure formation processes
- have experiences in computing and conduction simulations of microstructure formation from an integrated computer lab.

Knowledge in materials science and in fundamental mathematics recommended

regular attendance: 22,5 hours lecture, 11,5 hours exercises

self-study: 116 hours

oral exam ca. 30 min

**Organizational issues**

Terminvereinbarung für die mündliche Prüfung: Sobald Sie wissen, wann Sie die Prüfung ablegen möchten, schreiben Sie bitte eine Mail an die Prüferin Anastasia August (anastasia.august2@kit.de) und schlagen Sie einen oder mehrere Termin/e vor. Die Prüfung dauert ca. 30 Minuten.

V

**Modern Control Concepts II**

2106032, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content****Learning Content:**

1. Discrete time systems
2. The role of zeros (different kinds of zeros, zero dynamics, internal model principle, repetitive control, 2Dof structures, controller design via Diophantine equations)
3. Limitations of control systems
4. Linear multivariable systems
5. Multivariable control for LTI systems (coprime factorization, relative gain array, decentral and cooperative controls, decoupling controls)
6. Internal model control (internal stability, Youla parametrization, predictive structures, different 2DoF structures)
7. Extended control loop structures (serial and parallel cascades, multiple controller structures, inferential control, split range control)
8. Differential-algebraic systems of equations
9. Model reduction
10. Linear time-varying systems
11. Solution and simulation of complicated dynamical systems (ODEs, Cauchy problems, boundary value problems, PDEs, hybrid systems, DAEs, DDEs, computer algebra, etc.)

**Recommendations**

- Basics in Measurement and Control Systems
- Modern Control Concepts I
- Alternatively, comparable courses of the faculty of electrical engineering

**Competence Certificate**

Colloquium before each experiment

After completion of the experiments: written examination

Duration: 90 minutes

Auxiliary means: none

**Prerequisites**

none

**Workload**

120 hours

Below you will find excerpts from events related to this course:

**Motor Vehicle Laboratory**

2115808, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Practical course (P)  
On-Site**

**Content**

1. Determination of the driving resistances of a passenger vehicle on a roller dynamometer; measurement of the engine performance of the test vehicle
2. Investigation of a twin-tube and a single-tube shock absorber
3. Behavior of car tyres under longitudinal forces and lateral forces
4. Investigation of acoustic behaviour of vehicles
5. Rolling resistance, energy dissipation and high-speed strength of car tires
6. Investigation of the moment transient characteristic of a Visco clutch

Learning Objectives:

The students have deepened their knowledge on motor vehicles acquired in lectures and can apply it practically. They have an overview of the applied measuring technique and can execute and analyse measurements for the handling of given problem definitions. They are ready to analyze and to judge measurement results.

V

**Multi-scale Plasticity**

2181750, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

This module will attempt to provide an overview to complex subjects in the field of material mechanics. For this purpose important scientific papers will be presented and discussed.

This will be done by having students read and critique one paper each week in a short review. In addition, each week will include presentation from one of the participants which aim to advocate or criticise each piece of work using the short reviews. He will also be the discussion leader, while students discuss the content, ideas, evaluation and open research questions of the paper. Using a professional conference management system (HotCRP), the student assume the role of reviewers and gain insight into the work of researchers.

The student

- can explain the physical foundations of plasticity as well as results of latest research.
- can independently read and evaluate scientific research papers.
- can present specific, technical information in structured, precise, and readable manner.
- is able to argue for and/or against a particular approach or idea using the knowledge acquired within the lecture.

preliminary knowlegde in mathematics, physics, mechanics and materials science recommended

regular attendance: 22,5 hours

self-study: 97,5 hours

Exam: presentation (40%), oral examination (30 min, 60%)

The maximum number of students is 14 per semester.

**Organizational issues**

Blockveranstaltung in 5 Blöcken, Termine und Ort werden bekannt gegeben.

**Nanotribology and -Mechanics**  
2182712, WS 24/25, 2 SWS, Language: English, [Open in study portal](#)

Block (B)  
On-Site

**Content**

In the summer semester the lecture is offered in German and in the winter semester in English!

**Part 1: Fundamentals of nanotribology**

- General tribology / nanotechnology
- Forces and dissipation on the nanometer scale
- Experimental methods (SFA, QCM, FFM)
- Prandtl-Tomlinson model
- Superlubricity
- Carbon-based tribosystems
- Electronic friction
- Nanotribology in liquids
- Atomic abrasion
- nanolubrication

**Part 2: Topical papers**

The student can

- explain the physical foundations and common models used in the field of nanotribology and nanomechanics
- describe the most important experimental methods in nanotribology
- critically evaluate scientific papers on nanotribological issues with respect to their substantial quality

preliminary knowledge in mathematics and physics recommended

regular attendance: 22,5 hours

preparation for presentation: 22,5 hours

self-study: 75 hours

presentation (40%) and oral examination (30 min, 60%)

no tools or reference materials

## NMR Micro Probe Hardware Conception and Construction

2142551, SS 2025, 2 SWS, Language: English, [Open in study portal](#)

**Practical course (P)  
Blended (On-Site/Online)**

### Content

In order to prepare attendees, the following chapters will be offered, spread over the week as lecture units, and accompanying the practical work:

- Theory of magnetic resonance imaging
- The MRI probe and the principle of reciprocity
- RF resonators
- Coaxial cables and cable traps
- Tuning and matching the MRI probe
- Effects of material susceptibility
- The mechanical support of the MRI probe
- Introduction to ParaVision, the MRI imaging software.

V

**Non-ferros metals and alloys**

2174555, SS 2025, 3 SWS, Language: German, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

This lecture gives an introduction in the material physics of non-ferrous metals and alloys. Focus is placed on:

- Synthesis and manufacturing
- Constitution (phase diagrams)
- Microstructure
- Mechanical and physical properties

which determine their respective applications. Since the students get an overview of the potentials and limitations of non-ferrous metals and alloys, they will receive the expertise to assess and decide about their different possible fields of applications.

**Nuclear Power Plant Technology**

2170460, SS 2025, 2 SWS, Language: English, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

The training objective of the course is the qualification for a research-related professional activity in nuclear power plant engineering. The participants can describe the most important components of nuclear power plants and their function. You can design or modify nuclear power plants independently and creatively. They have acquired a broad knowledge of this power plant technology, including specific knowledge of core design, design of primary and secondary systems, and of nuclear safety technologies. Based on the acquired knowledge in thermodynamics and neutron physics, they can describe and analyze the specific behavior of the nuclear power plant components and assess risks. Participants of the lecture have a trained analytical thinking and judgment in the design of nuclear power plants.

**Power plants with pressurized water reactors:**

Design of the pressurized water reactor

- Fuel assemblies
- Control rods and drives
- Core instrumentation
- Reactor pressure vessel and its internals

Components of the primary system

- Primary coolant pumps
- Pressurizer
- Steam generator
- Water make-up system

Secondary system:

- Turbines
- Reheater
- Feedwater system
- Cooling systems

Containment

- Containment design
- Components of safety systems
- Components of residual heat removal systems

Control of a nuclear power plant with PWR

Power plants with boiling water reactors:

Design of the boiling water reactor

- Fuel assemblies
- Control elements and drives
- Reactor pressure vessel and its internals

Containment and components of safety systems

Control of a nuclear power plant with boiling water reactors

**Content**

Simulations are used in many areas of mechanical engineering, such as the strength and crash calculation of components or the calculation and design of flow processes. They offer the possibility of predicting real physical effects with the aid of computers, thus providing a deeper understanding of the observed effects and their causes. The aim of the course is to provide students with the fundamentals for the successful generation and execution of simulations in mechanical engineering.

Conservation equations are formulated for modelling. To close the system of equations, constitutive equations must also be formulated. The resulting partial differential equations (PDEs) are usually space and time dependent and form the fundamental components of modelling. The PDEs in question usually cannot be solved analytically, so that numerical methods and, in most cases, discretization methods are required.

The creation of suitable simulation models, the execution and evaluation of simulation studies and the avoidance of typical errors can be learnt, but also require some practice. Therefore, the course consists of three elements: Lectures, classroom exercises and computer exercises. As part of the computer exercises, students learn to implement (in Python), apply and evaluate appropriate simulation methods for given problems.

**Content** (with lectures (L), exercises (Ex) and/or computer exercises (PC))

- Introduction: model definition, overview of numerical simulation methods (L)
- Tensor calculus, Python and Git (L, Ex, PC)
- Equilibrium equations, constitutive laws, model reduction (L, Ex)
- Method of Weighted Residuals (MWR) (L, Ex)
- Finite Difference Method (FDM) (L, Ex, PC)
- Finite Element Method (FEM) (L, Ex, PC)
- Finite Volume Method (FVM) (L, Ex, PC)
- Selection of methods (L)

**Learning objectives:**

The students will be able to

- name and explain the balance equations and give examples of constitutive laws,
- construct models for continuum mechanical problems,
- explain model reduction approaches,
- explain the basic assumptions and techniques of the numerical methods covered (MWR, FDM, FEM, FVM), implement them in software and evaluate their suitability for given problems.

V

**Numerical Simulation of Turbulent Flows**2153449, WS 24/25, 3 SWS, Language: German, [Open in study portal](#)**Lecture (V)  
On-Site****Content**

The students are qualified to describe the fundamentals of direct numerical simulation (DNS) and large eddy simulation (LES) of turbulent flows. They understand the principle differences between these simulation methods and the respective properties of the conventional turbulence modelling approaches basing on Reynolds Averaged Navier-Stokes equations (RANS). They can describe subgrid scale models, peculiarities of wall and inlet/outlet modelling, suitable numerical solution schemes and evaluation methods. They have obtained the knowledge and understanding required to identify the best modelling approach (among the available methods) for the problem at hand, thus being able to solve given thermal and fluid dynamical problems appropriately.

**The lecture series will introduce in following subjects of the turbulence simulation method:**

- Appearance of turbulence and deduction of requirements and limits of the simulation method.
- Conservation equations for flows with heat transfer, filtering them in time or space.
- Some subgrid scale models for small scale turbulence and their physical justification.
- Peculiarities in applying boundary and initial conditions.
- Suitable numerical schemes for integration in space and time.
- Statistical and graphical methods to analyse the simulation results.
- Application examples for turbulence simulations in research and engineering

**Optical Measuring Systems**

2106010, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
On-Site

**Content**

The lecture gives an introduction to optical measuring systems and optical metrology. Optical metrology offers the advantages of non-contact and fast measurement and is therefore also suitable for direct measurements during the process.

The measuring systems are described on the basis of the underlying physical principles and their practical application is demonstrated using specific examples.

**Content:**

- Introduction
- Optical measurement principles
- System / Optics and Light
- Optical components
- Optical systems for
  - Distance measurement
  - Surface measurement
  - Gas sensing

**Learning objectives:**

The students...

- know the basics of optical metrology.
- know different optical measuring principles.
- know the function of optical components.
- are able to find and use the appropriate measuring system for different measuring tasks.

**Literature**

V

**Organ support systems**

2106008, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
On-Site

**Content****Content:**

- Introduction: Definitions and classification of organ support and replacement.
- Special topics: acoustic and visual prostheses, exoskeletons, neuroprostheses, tissue-engineering, hemodialysis, heart-lung machine, artificial hearts, biomaterials.

**Learning objectives:**

Students have fundamental knowledge about functionality of organ support systems and its components. An analysis of historical developments can be done and limitations of current systems can be found. The limits and possibilities of transplantations can be elaborated.

**Organizational issues**

V

**Phase Transformations in Materials**

2173421, WS 24/25, 3 SWS, Language: English, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content***Learning objectives:*

Students are familiar with a generalized scheme of phase transformations important in materials science and engineering. This includes qualitative and quantitative description of thermodynamics and kinetics of phase transformations. The students are able to apply their fundamental knowledge in order to describe important phase transformations and to deduce properties of materials undergoing these transformations.

*Content:*

Ch. 0: General Information

Ch. 1: Thermodynamic and Kinetic Fundamentals

- Thermodynamics
- Kinetics
- Overview About Phase Transformations/Schemes

Ch. 2: Experimental Techniques

- General Terms
- Structural Investigations
- Physical Investigations
- Chemical Investigations
- Microstructural Investigations

Ch. 3: Single-Component Systems

- Solidification and Allotropic Transformations
  - Solidification of Elements
    - Nucleation
    - Homogeneous
    - Heterogeneous
    - Growth
      - Temperature-Time-Dependence
      - Facet Energies
      - Facet Growth
      - Heat Transfer (Thermal Dendrites)
  - Allotropic Transformations
    - Nucleation
      - Impact of Elastic Strain Energy
      - Interface Types
    - Growth
      - Temperature-Time-Dependence
- Continuous Phase Transitions

Ch. 4: Multi-Component Systems

- Reconstructive Transformation
  - Solidification of Solid Solutions
  - Spinodal Decomposition
  - Eutectic and Eutectoid Reactions
  - Peritectic and Peritectoid Reactions
  - Precipitation and Ageing
- Displacive Transformation
  - Intermediate Transformations
  - Order Transition
  - Massive Transformation

*Work Load*

lectures: 36 h

private studies: 64 h

### Physical and chemical principles of nuclear energy in view of reactor accidents and back-end of nuclear fuel cycle

Lecture (V)  
On-Site

2189906, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Content**

- Relevant physical terms of nuclear physics
- Decay heat removal- Borst-Wheeler equation
- The accidents in TMI- Three Mile Island, and Fukushima .
- Fission , chain reaction and reactor control systems
- Basics of nuclear cross sections
- Principles of reactor dynamics
- Reactor poisoning
- The Idaho and Chernobyl accidents
- Principles of the nuclear fuel cycle
- Reprocessing of irradiated fuel elements and vitrification of fission product solutions
- Interim storage of nuclear residues in surface facilities
- Multi barrier concepts for final disposal in deep geological formations
- The situation in the repositories Asse II, Konrad and Morsleben

**The students**

- understand the physical explanations of the known nuclear accidents
- can perform simplified calculations to demonstrate the accidents outcome.
- Define safety relevant properties of low/ intermediate / high level waste products
- Are able to evaluate principles and implications of reprocessing, storage and disposal options for nuclear waste.

Regular attendance: 14 h

self study 46 h

oral exam about 20 min.

**Physical basics of laser technology**

2181612, WS 24/25, 3 SWS, Language: German, [Open in study portal](#)

Lecture / Practice (VÜ)  
On-Site

**Content**

Based on the description of the physical basics about the formation and the properties of laser light the lecture goes through the different types of laser beam sources used in industry these days. The lecture focuses on the usage of lasers especially in materials engineering. Other areas like measurement technology or medical applications are also mentioned.

- physical basics of laser technology
- laser beam sources (solid state, diode, gas, liquid and other lasers)
- beam properties, guiding and shaping
- lasers in materials processing
- lasers in measurement technology
- lasers for medical applications
- safety aspects

The lecture is complemented by a tutorial.

The student

- can explain the principles of light generation, the conditions for light amplification as well as the basic structure and function of different laser sources.
- can describe the influence of laser, material and process parameters for the most important methods of laser-based materials processing and choose laser sources suitable for specific applications.
- can illustrate the possible applications of laser sources in measurement and medicine technology
- can explain the requirements for safe handling of laser radiation and for the design of safe laser systems.

Basic knowledge of physics, chemistry and material science is assumed.

regular attendance: 33,5 hours

self-study: 116,5 hours

The assessment consists of an oral exam (ca. 30 min) taking place at the agreed date (according to Section 4(2), 2 of the examination regulation). The re-examination is offered upon agreement.

It is allowed to select only one of the lectures "Laser in automotive engineering" (2182642) or "Physical basics of laser technology" (2181612) during the Bachelor and Master studies.

**Physics for Engineers**

2142890, SS 2025, 4 SWS, Language: German, [Open in study portal](#)

Lecture / Practice (VÜ)  
On-Site

**Content**

## 1) Foundations of solid state physics

- Wave particle dualism
- Tunnelling
- Schrödinger equation
- H-atom

## 2) Electrical conductivity of solids

- solid state: periodic potentials
- Pauli Principle
- band structure
- metals, semiconductors and isolators
- p-n junction / diode

## 3) Optics

- quantum mechanical principles of the laser
- linear optics
- non-linear optics

Exercises are used for complementing and deepening the contents of the lecture as well as for answering more extensive questions raised by the students and for testing progress in learning of the topics.

The student

- has the basic understanding of the physical foundations to explain the relationship between the quantum mechanical principles and the optical as well as electrical properties of materials
- can describe the fundamental experiments, which allow the illustration of these principles

regular attendance: 22,5 hours (lecture) and 22,5 hours (exercises)

self-study: 105 hours

The assessment consists of a written exam (90 minutes) (following §4(2), 1 of the examination regulation).

Legend:  Online,  Blended (On-Site/Online),  On-Site,  Cancelled

### Competence Certificate

The examination is carried out in the form of a written test of 120 minutes.

The examination includes the contents of Physiologie und Anatomie I (offered every winter term) and Physiologie und Anatomie II (offered every summer term).

### Prerequisites

The courses "T-ETIT-101932 - Physiologie und Anatomie I" und "T-ETIT-101933 - Physiologie und Anatomie II" must not been started.

### Annotation

#### Winter/summer term:

WT: Physiologie und Anatomie I

ST: Physiologie und Anatomie II

**Competence Certificate**

oral exam (about 25 minutes)

**Prerequisites**

T-MACH-110268 – Plastizität von metallischen und intermetallischen Werkstoffen has not been started

T-MACH-105301 - Werkstoffkunde III has not been started

**Modeled Conditions**

The following conditions have to be fulfilled:

1. The course [T-MACH-105301 - Materials Science and Engineering III](#) must not have been started.

**Workload**

240 hours

*Below you will find excerpts from events related to this course:*

V

**Plasticity of Metals and Intermetallics**

2173648, SS 2025, 4 SWS, Language: English, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content****Learning Objectives**

Students are familiar with macroscopic, mesoscopic and microscopic mechanisms of plastic deformation in metals, alloys and intermetallics including the qualitative and quantitative descriptions. Furthermore, students can apply their knowledge in order to deduce and explain mechanism-property relationships in this kind of materials and their use in materials manufacturing.

**Content**

Chapter overview

Ch. 0: General Information

Ch. 1: Relevance of Plasticity in Industry and Research

Ch. 2: Macroscopic Features of Plastic Deformation

Ch. 3: Fundamentals and Interrelations to other Lectures

- Fundamental Concepts of Elasticity
- Macroscopic Strength and Strengthening/Hardening
- Fundamentals of Crystallography
- Fundamentals of Defects in Crystalline Solids

Ch. 4: Dislocations

- Fundamental Concept
- Observation of Dislocations
- Properties of Dislocations
- Dislocations in fcc Metals
- Dislocations in bcc Metals
- Dislocations in hcp Metals and Complex Intermetallics

Ch. 5: Single Crystal Plasticity

- General Stages of Plastic Deformation and Fundamentals of the Stress-Strain curve (fcc Metals)
- Influence of Temperature, Orientation, Strain Rate, etc. (fcc Metals)
- Further Examples (Extension of the Results to bcc, hcp and Intermetallic Materials)
- Deformation Twinning

Ch. 6: Plasticity of Polycrystalline Materials

- Transition from Single Crystals to Polycrystals
- Strength of Polycrystals
  - Solute Atoms
  - Dislocations (incl. Dislocation Patterning)
  - Grain Boundaries (incl. Homogenization of Critical Stress)
  - Precipitates and Dispersoids

Ch. 7: Other Mechanisms of Plastic Deformation

**Work Load**

*lectures:* 56 h

*private studies:* 187 h

**Organizational issues**

Details about the lecture are distributed via: <https://www.iam.kit.edu/wk/english/studies.php>

**Polymer Engineering I**

2173590, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

1. Economical aspects of polymers
2. Introduction of mechanical, chemical and electrical properties
3. Processing of polymers (introduction)
4. Material science of polymers
5. Synthesis

**learning objectives:**

The field of Polymer Engineering includes synthesis, material science, processing, construction, design, tool engineering, production technology, surface engineering and recycling. The aim is, to equip the students with knowledge and technical skills, and to use the material "polymer" meeting its requirements in an economical and ecological way.

The students

- are able to describe and classify polymers based on the fundamental synthesis processing techniques
- can find practical applications for state-of-the-art polymers and manufacturing technologies
- are able to apply the processing techniques, the application of polymers and polymer composites regarding to the basic principles of material science
- can describe the special mechanical, chemical and electrical properties of polymers and correlate these properties to the chemical bindings.
- can define application areas and the limitation in the use of polymers

**requirements:**

none

**workload:**

regular attendance: 21 hours

self-study: 99 hours

**Literature**

Literaturhinweise, Unterlagen und Teilmanuskript werden in der Vorlesung ausgegeben.

2174596, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

1. Processing of polymers
  2. Properties of polymer components
- Based on practical examples and components
- 2.1 Selection of material
  - 2.2 Component design
  - 2.3 Tool engineering
  - 2.4 Production technology
  - 2.5 Surface engineering
  - 2.6 Sustainability, recycling

**learning objectives:**

The field of Polymer Engineering includes synthesis, material science, processing, construction, design, tool engineering, production technology, surface engineering and recycling. The aim is, that the students gather knowledge and technical skills to use the material "polymer" meeting its requirements in an economical and ecological way.

The students

- can describe and classify different processing techniques and can exemplify mould design principles based on technical parts.
- know about practical applications and processing of polymer parts
- are able to design polymer parts according to given restrictions
- can choose appropriate polymers based on the technical requirements
- can decide how to use polymers regarding the production, economical and ecological requirements

**requirements:**

Polymerengineering I

**workload:**

The workload for the lecture Polymerengineering II is 120 h per semester and consists of the presence during the lecture (21 h) as well as preparation and rework time at home (99 h).

**Literature**

Literaturhinweise, Unterlagen und Teilmanuskript werden in der Vorlesung ausgegeben.

Recommended literature and selected official lecture notes are provided in the lecture.

### Polymers in MEMS C - Biopolymers and Bioplastics

2142855, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

Blended (On-Site/Online)

**Content**

Polymers are ubiquitous in everyday life: from packaging materials all the way to specialty products in medicine and medical engineering. Today it is difficult to find a product which does not (at least in parts) consist of polymeric materials. The question of how these materials can be improved with respect to their disposal and consumption of (natural) resources during manufacturing is often raised. Today polymers must be fully recycled in Germany and many other countries due to the fact that they do not (or only very slowly) decompose in nature. Furthermore significant reductions of crude oil consumption during synthesis are of increasing importance in order to improve the sustainability of this class of materials. With respect to disposal polymers which do not have to be disposed by combustion but rather allow natural decomposition (composting) are of increasing interest. Polymers from renewable sources are also of interest for modern microelectromechanical systems (MEMS) especially if the systems designed are intended as single-use products.

This lecture will introduce the most important classes of these so-called biopolymers and bioplastics. It will also discuss and highlight polymers which are created from naturally created analogues (e.g. via fermentation) to petrochemical polymer precursors and describe their technical processing. Numerous examples from MEMS as well as everyday life will be given.

Some of the topics covered are:

- What are biopolyurethanes and how can you produce them from castor oil?
- What are "natural glues" and how are they different from chemical glues?
- How do you make tires from natural rubbers?
- What are the two most important polymers for life on earth?
- How can you make polymers from potatoes?
- Can wood be formed by injection molding?
- How do you make buttons from milk?
- Can you play music on biopolymers?
- Where and how do you use polymers for tissue engineering?
- How can you built LEGO with DNA?

The lecture will be given in German language unless non-German speaking students attend. In this case, the lecture will be given in English (with some German translations of technical vocabulary). The lecture slides are in English language and will be handed out for taking notes. Additional literature is not required.

For further details, please contact the lecturer, PD Dr.-Ing. Matthias Worgull ([matthias.worgull@kit.edu](mailto:matthias.worgull@kit.edu)). Preregistration is not necessary.

**Organizational issues**

Lecture (V)  
On-Site

### Content

Students acquire the basic skills needed to develop future energy-efficient and safe drive system solutions for use in industrial environments. The course considers holistic development methods and evaluations of drive systems. The focal points can be divided into the following chapters:

- Powertrain System
- Operator System
- Environment System
- System Components
- Development Process

### Recommendations:

- Powertrain Systems Technology A: Automotive Systems

The assessment consists of a colloquium for every single experiment and an overall final colloquium incl. an oral presentation of 20 min.

**Prerequisites**

none

**Recommendation**

The attendance to one of the course Tribology (2181114) is strongly recommended!

**Workload**

120 hours

Below you will find excerpts from events related to this course:

**Praktikum "Tribologie"**

2182115, SS 2025, 3 SWS, Language: German, [Open in study portal](#)

**Practical course (P)  
On-Site**

**Content**

The laboratory comprises five full-day experiments, which address the following topics:

- tribological system analysis
- basics of tribological measurement techniques
- topographical surface characterization
- tribological model tests under sliding, rolling and abrasive conditions
- microscopical characterization of worn surfaces

The student

- knows the most common methods of friction and wear measurement
- knows the most common tribological model tests for the characterization of materials under sliding, rolling and abrasive conditions
- can carry out a tribological system analysis and based on that derive suitable loading parameters for model tests

The attendance to one of the course Tribology (2181114) is recommended.

regular attendance: 35 hours

self-study: 85 hours

The assessment consists of a colloquium for every single experiment and an overall final colloquium incl. an oral presentation of 20 min.

**Practical Course Polymers in MEMS**

2142856, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Block (B)**  
**Blended (On-Site/Online)**

**Content**

This practical course complements the lectures "Polymers in MEMS A", "Polymers in MEMS B" and "Polymers in MEMS C" and will allow students to gain a deeper understanding of polymers and their processing. During the course of this practical course, various polymers will be synthesized and molded into components suitable for microelectromechanical systems (MEMS) applications. The aim of the course is to bring a polymer all the way from synthesis to application.

The practical course will be given in German language unless non-German speaking students attend. In this case, the course will be given in English (with some German translations of technical vocabulary). Lecture notes for the experiments are in English language and will be handed out to the students. The practical course will be held "en block" at the end of the semester (presumably beginning of October)

For further details, please contact PD Dr.-Ing. Matthias Worgull ([matthias.worgull@kit.edu](mailto:matthias.worgull@kit.edu)). Preregistration is mandatory. The number of participants is limited to 5 students.

**Organizational issues**

Anmeldung und Terminabsprache in der Vorlesung (2142855)

Für weitere Rückfragen, wenden Sie sich bitte an PD Dr.-Ing. Matthias Worgull ([matthias.worgull@kit.edu](mailto:matthias.worgull@kit.edu)). Eine Voranmeldung ist notwendig. Die Platzanzahl ist auf 5 Teilnehmer beschränkt.

## Content

### 11.356 Registration information

The number of participants is limited and varies with the number of topics available at the institute.

The lab course and topic assignments are organized as follows:

- Application period: January 27, 2025 until February 06, 2025
- Interested students register via the Campus Plus portal (search for "Laboratory: Smart Energy System Lab")
- Topics will be published on the Campus Plus portal and the IAI website on January 24, 2025.
- You can indicate your preferred topics during the application. As far as possible, we will take this into account when assigning the topics.
- The CAS portal will indicate when and if you are accepted (limited number of participants).
- Your topic assignment will be announced together with the acceptance confirmation from CAS.
- Acceptances will be sent out on February 12, 2025.

**Credits will be awarded for SS2025 since the grading will take place in the summer semester.**

### 11.357 Compulsory work

- Completion of the assigned task
- Attendance during the attendance phase (min. 10 out of 15 days)
- Handover, documentation and presentation
- Relevant for the examination are: Preparation (literature research and discussion at the end of the preparation phase), practical work, presentation and a write-up.

### 11.358 Contents

The Institute of Automation and Applied Informatics (IAI) conducts research and development in the field of innovative, application-oriented information, automation and system technology for sustainable energy systems. The IAI is also responsible for the scientific operation and ongoing development of the Energy Lab (<https://www.iai.kit.edu/RPE.php>) energy research infrastructure at KIT Campus North.

As part of the ten-day lab course, students work in teams of two on one of several project topics derived from current research questions. The group of students typically goes through the following phases: Concept development/experiment preparation, implementation/experiment execution, evaluation/experiment analysis, presentation of results.

A list of project topics will be made available in advance. Interested students can express their topic preferences, based on which the students are assigned to the respective project topics. The participants will work independently on the assigned project - supervision is provided by IAI research assistants. At the end of the lab course, the work must be documented and presented in the style of a scientific paper. Additionally, each participant or team reports (approx. 10 min presentation + 5 min questions) on the topic worked on. This appointment takes place at the end of the internship.

The ten-day lab course begins with a joint kick-off event. This includes an organizational introduction, a tour of the Energy Lab and the Smart Energy System Simulation and Control Center (SEnSSiCC) and a brief presentation of all project topics. This is followed by the preparation phase (including an in-depth talk with your project manager) and the attendance phase. The course ends with a joint event at which the students present their solutions and work results in an examination presentation.

### 11.359 Dates

- 24.01.2025 Upload of the project topics to the IAI page and the Campus-Plus portal
- 27.01.2025 Start of the application period
- 06.02.2025 End of the application period
- 24.02.2025 Kick-Off-Event
- 24.02.2025 to 13.03.2025 Preparation phase (familiarization with the project topic), submission of literature review and in-depth talk with your project managers
- 14.03.2025 to 03.04.2025 Work phase on site at the Energy Lab (required attendance 10 out of 15 working days)
- 10.04.2025 & 11.04.2025 Final presentations and grading
- 31.05.2025 Deadline for handing in the written paper

### 11.360 Notes

- The courses are generally held in English. However, student presentations in German are possible.
- Quite often the topics are suitable for an extension into Master's thesis.
- The number of participants in the course is generally limited and varies according to the number of research projects available at the institute.

**Content**

In the practical training includes ten experiments:

1. Röntgenoptik
2. UVL + REM
3. Mischerbauteil
4. Rasterkraftmikroskopie
5. 3D-Printing
6. Lichtstreuung an Chrommasken
7. Abformung
8. SAW-Biosensorik
9. Nano3D-Drucker - Materialtransfer dünnster Schichten
10. Elektrospinning

Each student takes part in only four experiments.

The experiments are carried out at real workstations at the IMT and coached by IMT-staff.

## Principles of Medicine for Engineers

2105992, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

### Content

#### Content:

- Introduction: Definitions of "health" and "disease". History of medicine and paradigm shift towards evidence based medicine and personalized medicine.
- Special topics: nervous system, saltatory conduction, musculoskeletal system, cardio-circulatory system, narcosis, pain, respiratory system, sensory organs, gynaecology, digestive organs, surgery, nephrology, orthopaedics, immune system, genetics.

### Learning objectives:

Students have fundamental knowledge about functionality and anatomy of organs within different medical disciplines. The students further know about technical methods in diagnosis and therapy, common diseases, their relevance and costs. Finally the students are able to communicate with medical doctors in a way, in which they prevent misunderstandings and achieve a more realistic idea of each others expectations.

**Probabilistic Measurement and Estimation**2138334, SS 2025, 3 SWS, Language: German, [Open in study portal](#)Lecture (V)  
On-Site

**Content****Lerninhalt (EN)**

1. Amplifiers
2. Digital technology
3. Stochastic modeling for measurement applications
4. Estimation
5. Kalman Filter
6. Environmental perception

**Lernziele (EN):**

The capabilities of modern sensor technology pave the way for novel applications in engineering. Especially digital measurement techniques may be used even in very complex environments and thus have strong impact on technological progress. Stochastic models of measurement processes form the basis for meaningful information processing and provide a valuable tool for engineering. This interdisciplinary lecture addresses students in mechanical engineering and related subjects. The lecture gives an overview of digital technology and stochastics. These areas form the basics of estimation methods that can be embedded elegantly in the theory of state observers. Applications in signal processing for modern environmental perception (video, Lidar, Radar) illustrate the discussed subjects.

**Process Simulation in Forming Operations**

2161501, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**Blended (On-Site/Online)**

**Content**

Based on basics of continuum mechanics, material theory and numerics the lecture gives an introduction into the simulation of forming operations for metals

- plasticity for metallic materials: dislocations, twinning, phase transformations, anisotropy, hardening
- classification of forming operations and discussion of selected topics
- basics of tensor algebra and tensor analysis
- continuum mechanics: kinematics, finite deformations, balance laws, thermodynamics
- material theory: basics, modelling concepts, plasticity and visco plasticity, yield functions (von Mises, Hill, ...), kinematic and isotropic hardening, damage
- thermomechanical coupling
- modelling of contact
- finite element method: explicit and implicit formulations, types of elements, numerical integration of material models
- process simulation of selected problems of sheet metal forming

### Product- and Production-Concepts for modern Automobiles

2149670, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
Blended (On-Site/Online)

**Content**

The lecture illuminates the practical challenges of modern automotive engineering. As former leaders of the automotive industry, the lecturers refer to current aspects of automotive product development and production.

The aim is to provide students with an overview of technological trends in the automotive industry. In this context, the course also focuses on changes in requirements due to new vehicle concepts, which may be caused by increased demands for individualisation, digitisation and sustainability. The challenges that arise in this context will be examined from both a production technology and product development perspective and will be illustrated with practical examples thanks to the many years of industrial experience of both lecturers.

The topics covered are:

- General conditions for vehicle and body development
- Integration of new drive technologies
- Functional requirements (crash safety etc.), also for electric vehicles
- Development Process at the Interface Product & Production, CAE/Simulation
- Energy storage and supply infrastructure
- Aluminium and lightweight steel construction
- FRP and hybrid parts
- Battery, fuel cell and electric motor production
- Joining technology in modern car bodies
- Modern factories and production processes, Industry 4.0.

**Learning Outcomes:**

The students ...

- are able to name the presented general conditions of vehicle development and are able to discuss their influences on the final product using practical examples.
- are able to name the various lightweight approaches and identify possible areas of application.
- are able to identify the different production processes for manufacturing lightweight structures and explain their functions.
- are able to perform a process selection based on the methods and their characteristics.

**Workload:**

regular attendance: 25 hours

self-study: 95 hours

**Organizational issues**

Termine werden über Ilias bekannt gegeben.

Bei der Vorlesung handelt es sich um eine Blockveranstaltung. Eine Anmeldung über Ilias ist erforderlich.

Zur Vertiefung des im Rahmen der Lehrveranstaltung erworbenen Wissens werden die theoretischen Vorlesungseinheiten durch Praxiseinheiten im Umfeld der Karlsruher Forschungsfabrik (<https://www.karlsruher-forschungsfabrik.de>) unterstützt.

The lecture is a block course. An application in Ilias is mandatory.

The theoretical lectures are complemented by practical lectures in the Karlsruhe Research Factory (<https://www.karlsruher-forschungsfabrik.de/en.html>) to deepen the acquired knowledge.

**Literature****Medien:**

Skript zur Veranstaltung wird über (<https://ilias.studium.kit.edu/>) bereitgestellt.

**Media:**

Lecture notes will be provided in Ilias (<https://ilias.studium.kit.edu/>).

## Product Development - Component Dimensioning

2150511, SS 2025, SWS, Language: German, [Open in study portal](#)

Lecture / Practice (VÜ)  
On-Site

### Content

The aim of the lecture is to present the topics of the dimensioning and the material science in their connection and to learn how to deal with corresponding methods and the combination thereof.

For the prospective engineer the most important educational objective is to understand the interaction of these topics while the interplay of the individual material stresses in the component are clarified.

The topics in detail are

Structural dimensioning: basic stresses, superimposed stresses, notch influence, fatigue limit, fatigue strength, assessment of cracked components, operational strength, residual stresses, high temperature stress and corrosion

Material selection: Basics, material indices, material selection diagrams, Ashby procedure, multiple boundary conditions, target conflicts, shape and efficiency.

Learning target: The students...

are capable to design and dimension components according to their load.

can include mechanical material properties from the mechanical material test in the dimensioning process.

can identify superimposed total loads and critical loads on simple components and to compute them.

acquire the skill to select materials based on the application area of the components and respective loads.

Examination: written exam (2 hours)

### Organizational issues

Freitags generell nach Vereinbarung

**Product Lifecycle Management**

2121350, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

The course includes:

- Basics for product data management and data exchange
- IT system solutions for Product Lifecycle Management (PLM)
- Economic viability analysis and implementation problems
- Illustrative scenario for PLM using the example of the institute's own I4.0Lab

After successful attendance of the course, students can:

- identify the challenges of data management and exchange and describe solution concepts for these challenges.
- clarify the management concept PLM and its goals and highlight the economic benefits.
- explain the processes required to support the product life cycle and describe the most important business software systems (PDM, ERP, ...) and their functions.

**Competence Certificate**

Active participation in lab course and successful completion of colloquia before each course. The colloquia are graded.

**Annotation**

The course is limited in capacity, therefore the allocation of places is based on § 5 (4) in the Study and Examination Regulations

This results in the following selection criteria:

The selection is based

- on the study progress (here the study progress in credit points and not the study progress in semesters is taken as a basis),
- on the waiting period in the case of equal progress in studies
- by lot if the waiting period is the same.

The procedure is explained in more detail on ILIAS.

Successful participation requires active and continuous participation in the course.

**Workload**

120 hours

**Production Techniques Laboratory**

2110678, SS 2025, 4 SWS, Language: German, [Open in study portal](#)

**Practical course (P)**  
**Blended (On-Site/Online)**

**Content**

The production technique laboratory (PTL) is a collaboration of the institutes wbk, IFL, IMI and ifab.

1. Information management for I4.0 (IMI)
2. VR-supported product development (IMI)
3. Production of parts with CNC turning machines (wbk)
4. Controlling of production systems using PLCs (wbk)
5. Automated assembly systems (wbk)
6. Flexible material flow in the age of Industry 4.0 (IFL)
7. Identification in production and logistics (IFL)
8. Storage and order-picking systems (IFL)
9. Production Management (ifab)
10. Time study (ifab)
11. Accomplishment of workplace design (ifab)

**Recommendations:**

Participation in the following lectures:

- Informationssysteme in logistics and supply chain management
- Material flow in logistic systems
- Manufacturing technology
- Human Factors Engineering

**Learning Objects:**

The students acquire in the lab profound knowledge about the scientific theories, principles and methods of Production Engineering. Afterwards they are able to evaluate and design complex production systems according to problems of manufacturing and process technologies, materials handling, handling techniques, information engineering as well as production organisation and management.

After completion this lab, the students are able

- to analyse and solve planning and layout problems of the discussed fields,
- to evaluate and configure the quality and efficiency of production, processes and products,
- to plan, control and evaluate the production of a production enterprise,
- to configure and evaluate the IT architecture of a production enterprise,
- to design and evaluate appropriate techniques for conveying, handling and picking within a production system,
- to design and evaluate the part production and the assembly by considering the work processes and the work places.

**Organizational issues**

Anwesenheitspflicht, Teilnehmerzahl begrenzt. Anmeldung über ILIAS

Arbeitsaufwand von 120 h (=4 LP).

Nachweis: **bestanden / nicht bestanden**

Regelmäßige Teilnahme an Praktikumsversuchen und erfolgreiche Eingangskolloquien.

Zur Vertiefung des im Rahmen der Lehrveranstaltung erworbenen Wissens werden die theoretischen Vorlesungseinheiten durch Praxiseinheiten unterstützt.

**Literature**

Das Skript und Literaturhinweise stehen auf ILIAS zum Download zur Verfügung.

**Production Technology for E-Mobility**

2150605, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
On-Site

**Content**

In the lecture Production Engineering for Electromobility the students should be enabled to design, select and develop production processes for the production of the components of an electric drive train (electric motor, battery cells, fuel cells) by using research-oriented teaching. To apply what has been learned, practical appointments are taking place at the Karlsruhe Forschungsfabrik as part of the course.

**Learning Outcomes:**

The students are able to:

- describe the structure and function of a fuel cell, an electric traction drive and a battery system.
- reproduce the process chains for the production of the components fuel cell, battery and electric traction drive.
- apply methodical tools to solve problems along the process chain.
- derive the challenges in the production of electric drives for electric mobility.
- describe the factors influencing the individual process steps on each other using the process chain of Li-ion battery cells.
- enumerate or describe the necessary process parameters to counteract the influencing factors of the process steps in Li-ion battery cell production.
- apply methodical tools to solve problems along the process chain for the production of Li-ion battery cells.
- derive the challenge of mounting and dismounting battery modules.
- derive the challenges in the production of fuel cells for use in mobility.
- develop solutions to overcome challenges in the production of fuel cells.

**Workload:**

regular attendance: 42 hours

self-study: 78 hours

**Organizational issues**

Zur Vertiefung des im Rahmen der Lehrveranstaltung erworbenen Wissens werden die theoretischen Vorlesungseinheiten durch Praxiseinheiten im Umfeld der Karlsruher Forschungsfabrik (<https://www.karlsruher-forschungsfabrik.de>) unterstützt.

Zwei der Veranstaltungstermine finden in Form von Praktika in der Forschungsfabrik statt. Hier sollen die Studierenden das in der Vorlesung vermittelte Wissen durch praktische Tätigkeiten an Demonstratoranlagen der Brennstoffzellenfertigung anwenden. Diese sollen auch die kreative Lösungskompetenz der Studierenden fördern. Die Teilnahme an den Praxiseinheiten wird für die Teilnahme an der Prüfung vorausgesetzt.

The theoretical lectures are complemented by practical lectures in the Karlsruhe Research Factory (<https://www.karlsruher-forschungsfabrik.de/en.html>) to deepen the acquired knowledge.

Two of the course dates take the form of practical training in the Forschungsfabrik. Here, students will apply the knowledge imparted in the lectures by carrying out practical tasks on demonstrator systems for fuel cell production. These are also designed to foster students' creative problem-solving skills. Participation in the practical units is a prerequisite for taking the exam.

**Literature**

Skript zur Veranstaltung wird über Ilias (<https://ilias.studium.kit.edu/>) bereitgestellt.

Lecture notes will be provided in Ilias (<https://ilias.studium.kit.edu/>)

### Competence Certificate

oral exam (approx. 30 min)

The exam is offered in German only!

### Prerequisites

none

### Annotation

The course is capacity-limited, therefore the **allocation of places** is based on § 5 para. 4 in the module handbook: **Registration and admission to module examinations and courses**. This results in the following selection criteria:

- Students of the degree program have priority over students from outside the degree program
- Among students within the degree program, a decision may be made based on academic progress (not just with subject semesters)
- In the case of equal academic progress according to waiting time
- In the case of equal waiting time by lot

The exact procedure is explained on **ILIAS**.

"Successful participation requires active and continuous participation in the course."

### Workload

120 hours

Below you will find excerpts from events related to this course:

## Productivity Management in Production Systems

2110046, SS 2025, 3 SWS, Language: German, [Open in study portal](#)

On-Site

**Content**

1. Definition and terminology of process design and industrial engineering
2. Tasks of industrial engineering
3. Actual approaches of organisation of production (Holistic production systems, Guided group work et al.)
4. Methods and principles of industrial engineering and production systems
5. Case studies and exercises for process design
6. Industry 4.0

**Requirements:**

- Compact course (one week full-time)
- Limited number of participants; seats are assigned according the date of registration
- Registration via ILIAS is required
- Compulsory attendance during the whole lecture

**Recommendations:**

- Knowledge of work science is helpful

**Learning objective:**

- Ability to design work operations and processes effectively and efficiently
- Instruction in methods of time study (MTM, Data acquisition etc.)
- Instruction in methods and principles of process design
- The Students are able to apply methods for the design of workplaces, work operations and processes.
- The Students are able to apply actual approaches of process and production organisation.

**Competence Certificate**

Colloquia on exercises during the semester and presentation of a group task at the end of the semester (ungraded)

**Prerequisites**

The number of participating students is limited. Details for the admission process can be found in the category "Organizational issues" of the associated event.

**Recommendation**

- Basics of the finite element method (ideally with Abaqus)
- Basic knowledge of continuum mechanics
- Basics of programming
- Basic knowledge of fibre-reinforced polymers

**Workload**

120 hours

Below you will find excerpts from events related to this course:

V

**Programming in CAE-Applications**

2113109, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Practical course (P)**  
**Blended (On-Site/Online)**

**Content**

The development of components supported by numerical simulations, for example through the finite element method (FEM), has become an indispensable part of modern engineering work. They allow a virtual evaluation of different component variants and thus contribute to an efficient product development process. For the correct use of CAE methods and the generation of reliable simulation results, knowledge of the methodological background and a goal-oriented approach for the model setup and simulation evaluation is essential. Thereby, recurring problems can be solved efficiently and automatically by programming sequence and evaluation scripts. The investigation of modern material systems such as continuous fiber-reinforced plastics represents an additional challenge. For these complex materials, there is often a lack of commercially available methods, which is why the implementation of user-defined material models through suitable subroutines is increasingly necessary.

In this workshop, students learn about the everyday work of computational engineers. Step by step, the basics of the finite element method are worked out using practical examples in Abaqus, as well as typical procedures for model setup and evaluation. Building on this, basic knowledge of script programming in Python and the implementation of material models in Fortran subroutines is taught. The aim of the course is to illustrate the contents in an application-oriented manner through a combination of lectures, supervised classroom exercises and solving project tasks in small groups during the semester.

**Main topics:**

- Fundamentals of FE structural simulations with anisotropic materials using continuous fiber-reinforced plastics as an example (Abaqus)
- Automated model setup and evaluation with Python scripts
- Efficient evaluation of the result quality of FE-simulations
- Derivation of measures to improve structural load-bearing capacity
- User-defined material modelling (Fortran subroutines)

**Learning Objectives:**

Students will be able to

- understand the basics of the finite element method and use the FE software Abaqus to solve practical calculation tasks,
- automate the FE model generation as well as the result evaluation,
- evaluate the simulation results, identify errors and derive conclusions for improving the load-bearing capacity,
- understand the basics for developing material subroutines and implement them for simple examples.

**Organizational issues**

Die Veranstaltung findet immer dienstags um 15:45 Uhr am Campus Ost in Geb. 70.04, Raum 219 statt.

Aufgrund des gewünschten Betreuungsverhältnisses und der Institutsausstattung ist die maximale Anzahl der teilnehmenden Studierenden begrenzt. Die vorläufige Anmeldung erfolgt über das zugehörige Formular auf der Instituts-Homepage (<https://www.fast.kit.edu/lbt/1205.php>), welches Mitte September dort zusammen mit weiteren Details veröffentlicht wird. Bei zu vielen Interessenten findet eine Auswahl unter allen Interessenten statt.

---

The event takes place every Tuesday at 3:45 p.m. on Campus East in building 70.04, room 219.

Due to the desired supervision ratio and the institute's equipment, the maximum number of participating students is limited. Preliminary registration takes place via the associated form on the Institute's homepage (<https://www.fast.kit.edu/lbt/1205.php>), which will be published there together with further details in the mid of September. If there are too many interested students, a selection will take place among all interested students.

### Competence Certificate

Alternative test achievement (graded)

The competence certificate is a project work; alternative test achievement according to § 4 Abs. 2 No. 3 of the SPO. Here, the project work, the milestone-based presentation of the results in presentation form (10 min each) and a final oral examination (15 min) are included in the assessment.

### Prerequisites

none

### Modeled Conditions

The following conditions have to be fulfilled:

1. The course [T-MACH-110983 - Project Internship Additive Manufacturing: Development and Production of an Additive Component](#) must not have been started.

### Workload

120 hours

Below you will find excerpts from events related to this course:

V

**Project Internship Additive Manufacturing: Development and Production of an Additive Component** Practical course (P)  
On-Site  
 2149700, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Content**

The lecture "Project Internship Additive Manufacturing: Development and Production of an Additive Component" combines the basics of metallic laser powder bed fusion (LPBF) with a development project in cooperation with an industrial company. The students learn the basics of the following topics in the project-related lecture:

- Influence of different process variables on the component quality of parts produced in the LPBF process
- Preparation and simulation of the LPBF process
- Production of additive metallic components
- Process monitoring and quality assurance in additive manufacturing
- Topology optimization
- CAM for subtractive rework

The topics addressed in the course will be applied practically in various workshops on the individual topics and transferred to the developmental task in self-study.

Finally, the results of the elaborations are produced additively and post-processed subtractively.

**Learning Outcomes:**

The students ...

- are able to describe the properties and applications of the additive manufacturing processes laser powder bed fusion (LPBF).
- are able to select the appropriate manufacturing process for a technical application.
- are able to describe and implement the creation of a product along the entire additive process chain (CAD, simulation, work preparation, CAM) from the idea to the production.
- are able to discuss the development process for components that are optimized for additive manufacturing.
- are able to perform topology optimization.
- are able to simulate the additive process, compensate for process-related distortions and determine the ideal alignment on the building platform.
- are able to create necessary support structures for the additive process and to derive a building order file.
- are able to create a CAM model for the subtractive rework process of additive parts.

**Workload:**

regular attendance: 12 hours

self-study: 108 hours

**Organizational issues**

Die Veranstaltung beginnt mit einer Blockveranstaltung vor Semesterbeginn. Während des Semesters finden nur einzelne Pflichtveranstaltungen statt. Die genauen Termine werden über die Vorlesungsankündigung des wbk mitgeteilt: <http://www.wbk.kit.edu/studium-und-lehre.php>

Aus organisatorischen Gründen ist die Teilnehmerzahl für die Lehrveranstaltung begrenzt. Infolgedessen wird ein Auswahlprozess stattfinden. Der Link zur Bewerbung wird in der Vorlesungsankündigung über die Homepage des wbk (<http://www.wbk.kit.edu/studium-und-lehre.php>) zur Verfügung gestellt.

**Project Internship Additive Manufacturing: Development and Production of an Additive Component**

Practical course (P)  
On-Site

2149700, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Content**

The lecture "Project Internship Additive Manufacturing: Development and Production of an Additive Component" combines the basics of metallic laser powder bed fusion (LPBF) with a development project in cooperation with an industrial company. The students learn the basics of the following topics in the project-related lecture:

- Influence of different process variables on the component quality of parts produced in the LPBF process
- Preparation and simulation of the LPBF process
- Production of additive metallic components
- Process monitoring and quality assurance in additive manufacturing
- Topology optimization
- CAM for subtractive rework

The topics addressed in the course will be applied practically in various workshops on the individual topics and transferred to the developmental task in self-study.

Finally, the results of the elaborations are produced additively and post-processed subtractively.

**Learning Outcomes:**

The students ...

- are able to describe the properties and applications of the additive manufacturing processes laser powder bed fusion (LPBF).
- are able to select the appropriate manufacturing process for a technical application.
- are able to describe and implement the creation of a product along the entire additive process chain (CAD, simulation, work preparation, CAM) from the idea to the production.
- are able to discuss the development process for components that are optimized for additive manufacturing.
- are able to perform topology optimization.
- are able to simulate the additive process, compensate for process-related distortions and determine the ideal alignment on the building platform.
- are able to create necessary support structures for the additive process and to derive a building order file.
- are able to create a CAM model for the subtractive rework process of additive parts.

**Workload:**

regular attendance: 12 hours

self-study: 108 hours

**Project Workshop: Automotive Engineering**

2115817, WS 24/25, 3 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

During the Project Workshop Automotive Engineering a team of six persons will work on a task given by an German industrial partner using the instruments of project management. The task is relevant for the actual business and the results are intended to be industrialized after the completion of the project workshop.

The team will generate approaches in its own responsibility and will develop solutions for practical application. Coaching will be supplied by both, company and institute.

At the beginning in a start-up meeting goals and structure of the project will be specified. During the project workshop there will be weekly team meetings. Also a milestone meeting will be held together with persons from the industrial company. In a final presentation the project results will be presented to the company management and to institute representatives.

Also a milestone meeting will be held together with persons from the industrial company. In a final presentation the project results will be presented to the company management and to institute representatives.

Learning Objectives:

The students are familiar with typical industrial development processes and working style. They are able to apply knowledge gained at the university to a practical task. They are able to analyze and to judge complex relations. They are ready to work self-dependently, to apply different development methods and to work on approaches to solve a problem, to develop practice-oriented products or processes.

## ProVIL - Product Development in a Virtual Idea Laboratory

2146210, SS 2025, 4 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
Online

### Content

#### Content

The course ProVIL is carried out as an innovation project with 4 phases and a reality-related task. Using state-of-the-art hardware and software, the students develop their own product concepts in a team and carry out the following activities:

- Analysis of the existing market and the environment of a product area
- Identification and analysis of customer requirements
- Modelling of customer and user benefits as product profiles
- Validation of product profiles for target customer markets
- Generation of solution ideas for the technical implementation of product profiles
- Evaluation and selection of the best ideas
- Implementation of the selected ideas in functional prototypes
- Evaluation of the functional prototypes through planning, implementation, evaluation and interpretation of appropriate

### Experiments

- Presentation of the prototypes in a closing event

### Prerequisites

none

*Below you will find excerpts from events related to this course:***Python Algorithms for Automotive Engineering**2114862, SS 2025, 2 SWS, Language: German, [Open in study portal](#)**Lecture (V)  
Blended (On-Site/Online)****Content**Teaching content:

- Introduction to Python and useful tools and libraries for creating algorithms, graphical representation, optimization, symbolic arithmetic and machine learning
  - [Anaconda](#), [Pycharm](#), [Jupyter](#)
  - [NumPy](#), [Matplotlib](#), [SymPy](#), [Scikit-Learn](#)
- Methods and tools for creating software
  - Version management [GitHub](#), [git](#)
  - Testing software [pytest](#), [Pylint](#)
  - Documentation [Sphinx](#)
  - Continuous Integration (CI) [Travis CI](#)
  - Workflows in Open Source and Inner Source, Kanban, Scrum
- Practical programming projects to:
  - Road sign recognition
  - Vehicle state estimation
  - Calibration of vehicle models by mathematical optimization
  - Data-based modelling of the powertrain of an electric vehicle

Objectives:

The students have an overview of the programming language Python and important Python libraries to solve automotive engineering problems with computer programs. The students know current tools around Python to create algorithms, to apply them and to interpret and visualize their results. Furthermore, the students know basics in the creation of software to be used in later programming projects in order to develop high-quality software solutions in teamwork. Through practical programming projects (road sign recognition, vehicle state estimation, calibration, data-based modelling), the students can perform future complex tasks from the area of driver assistance systems.

**Organizational issues**

Die Vorlesung beginnt mit zwei Kick-Off Veranstaltung in Präsenz am 25.04. sowie am 09.05.2025 um 11:30 Uhr am Campus Ost, Geb.70.04, Raum 219. Die restlichen Termine finden überwiegend digital statt. Weitere Infos über ILIAS.

V

**Quality Management**

2149667, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**Blended (On-Site/Online)**

**Content**

Based on the quality philosophies Total Quality Management (TQM) and Six Sigma, the lecture deals with the requirements of modern quality management. Within this context, the process concept of a modern enterprise and the process-specific fields of application of quality assurance methods are presented. The lecture covers the current state of the art in preventive and non-preventive quality management methods in addition to manufacturing metrology, statistical methods and service related quality management. The content is completed with the presentation of certification possibilities and legal quality aspects.

Main topics of the lecture:

- The term "Quality"
- Total Quality Management (TQM) and Six Sigma
- Universal methods and tools
- QM during early product stages – product definition
- QM during product development and in procurement
- QM in production – manufacturing metrology
- QM in production – statistical methods
- QM in service
- Quality management systems
- Legal aspects of QM

**Learning Outcomes:**

The students ...

- are capable to comment on the content covered by the lecture.
- are capable of substantially quality philosophies.
- are able to apply the QM tools and methods they have learned about in the lecture to new problems from the context of the lecture.
- are able to analyze and evaluate the suitability of the methods, procedures and techniques they have learned about in the lecture for a specific problem.

**Railways in the Transportation Market**

2114914, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Block (B)  
On-Site**

**Content**

The lecture gives an overview about perspective, challenges and chances of rail systems in the national and European market. Following items will be discussed:

- Introduction and basics
- Rail reform in Germany
- Overview of Deutsche Bahn
- Regulation of railways
- Financing and development of rail infrastructure
- Group strategy "Strong Rail" and their building blocks: (climate, environment, digitalization, "Strong Rail" in Baden-Württemberg)
- Trends in the transportation market
- Field of actions in transport policy
- Intra- and intermodal competition
- Summary

**Learning Objectives:**

- To capture the entrepreneurial perspective on transport companies
- To appraise the intra- and intermodal competition
- To understand the regulative determinant
- To reflect trends in transportation market
- To comprehend strategic challenges, chances and fields of actions of transport companies
- To apply intermodal perspective
- To take important key figures of railways and transportation market
- To realize the relevance of sustainability and digitalization

<b>V</b>	<p><b>Rapid Industrialization of Immature Products using the Example of Electric Mobility</b></p> <p>2149621, WS 24/25, 2 SWS, Language: German, <a href="#">Open in study portal</a></p>	<p><b>Lecture (V) On-Site</b></p>
----------	---	---------------------------------------

**Content**

The lecture "Rapid Industrialization of Immature Products using the Example of Electric Mobility" deals with production engineering methods for the robust and cost-effective production of technologically novel, so-called "immature" products. In this context, approaches for solving the central challenges resulting from the tension triangle of product development, industrialization and production are identified and discussed.

Based on the motivation for rapid market entry, the current approach involving stakeholders and other participants is explained. On this basis, key enablers for rapid and targeted industrialization are derived and discussed. For example, robust industrial processes based on flexible equipment are an essential core element for cost-effective production. Against this background, industry-relevant concepts for the automation and flexibilization of production processes are presented in the lecture in order to be able to deal efficiently and effectively with product-specific changes on the production side. Therefore, the main goal of an industrialization process is to develop production technologies and processes that enable robust, resource-efficient and cost-effective manufacturing of established and innovative products.

The lecture is structured as follows:

1. Motivation for rapid industrialization (complex market requirements, shortened development and product cycles, decreasing quantities per variant, ...).
2. Industrialization methods (simultaneous engineering, releases, frozen zones, high volumes, ...)
3. Key enablers to accelerate industrialization (simulation and digitalization, flexible and digital production equipment)
4. Supply chains and suppliers
5. Testing and deployment
6. Ramp-up

**Learning Outcomes:**

- The students are familiar with the essential elements of simultaneous engineering and industrialization (motivation, processes, fields of action, challenges).
- The Students know the key enablers for the rapid industrialization of immature products (digitization, flexible production equipment, rapid manufacturing processes for primary production).
- The Students are familiar with the basic principles, methods and procedures of the main enablers. The understanding is deepened through theory, case and practical examples.
- The toolbox of key enablers described in the lecture allows students to select and independently apply the enablers in the context of future challenges.
- The Students are able to disseminate and to apply the knowledge acquired during the lecture in their future working lives.

V

**Reactor Safety I: Fundamentals**

2189465, SS 2025, 2 SWS, Language: German/English, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

This lecture will be given in English, if required in German

The lecture discuss the fundamental principles and concepts of reactor safety including the methodologies for safety assessment and major accidents.

In the lecture, the fundamental principles and concepts of reactor safety are discussed. They facilitate the assessment of the safety status of nuclear power plants and the interpretation of incidents or accidents as such as Chernobyl or Fukushima. Starting with the explanations of the technical safety features of reactor systems, the safety concepts of different reactor types are discussed. The initiation and progression of incidents/accidents as well as the methods for the safety evaluation are also treated in the lecture. Discussing the Fukushima accident, the radiological risk from nuclear power plants together with the counter measures to stop severe accident and to limit the consequences will be explained. Finally, new development to increase the safety of reactors of Generation III and IV will be presented.

**Lecture Content:**

- National and international nuclear regulations
- Fundamental principles of reactor safety
- Implementation of safety principles in nuclear power plants of generation 2
- Methods for safety analysis and safety assessment
- Key physical phenomena during severe accidents determining radiological impact
- How to analyse reactor accidents with numerical simulation tools
- Discussion severe accidents e.g. the Fukushima accident

## Lernziele

**Lecture Content:**

- National and international nuclear regulations
- Fundamental principles of reactor safety
- Implementation of safety principles in nuclear power plants of generation 2
- Safety analysis and methods for safety assessment
- Nuclear events and accidents and its evaluation methods
- Discussion severe accidents

Knowledge in energy technology, nuclear power plants, reactor physics, thermal hydraulic of nuclear reactors is welcomed

regular attendance: 30 h

self-study: 90 h

**Reliability and Test Engineering (Lecture)**

2145350, WS 24/25, 1 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**Blended (On-Site/Online)**

**Content**

The students know the methods of reliability and test engineering and the components used. They learn the methods to carry out test planning, test execution and test interpretation for a given problem on a test bench.

The following contents are taught in the lecture:

- Relevance of reliability and test engineering in the industry.
- Overview of test equipment
- Test strategies and statistical test planning
- Testing with hypotheses
- Modelling of drive trains
- Experimental controller parameterization
- Reliability models

The implementation of test planning, test execution and test interpretation are carried out on a demonstrator test bench using the example of vibration-based condition monitoring on a drive train. Students learn how to use test benches and the integrated control and regulation systems as well as measurement technology.

In addition, the participants use Matlab to evaluate measurement data from the test bench.

**Organizational issues**

Die Teilnehmerzahl des Praktikums ist grundsätzlich beschränkt, weshalb eine Anmeldung erforderlich ist. Nähere Informationen befinden sich auf der Website des IPEK unter dem Titel der Lehrveranstaltung: <https://www.ipek.kit.edu/2976.php>

Die Veranstaltung findet im Block zusammen mit dem Workshopteil (LVNr. 2145351) statt.

Im WS24/25 wird die LV vom 14.-18.10. im Block stattfinden.

V

**Robotics I - Introduction to Robotics**

2424152, WS 24/25, SWS, Language: English, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

The lecture provides an overview of the fundamentals of robotics using the examples of industrial robots, service robots and autonomous humanoid robots. An insight into all relevant topics is given. This includes methods and algorithms for robot modeling, control and motion planning, image processing and robot programming. First, mathematical basics and methods for kinematic and dynamic robot modeling, trajectory planning and control as well as algorithms for collision-free motion planning and grasp planning are covered. Subsequently, basics of image processing, intuitive robot programming especially by human demonstration and symbolic planning are presented.

In the exercise, the theoretical contents of the lecture are further illustrated with examples. Students deepen their knowledge of the methods and algorithms by independently working on problems and discussing them in the exercise. In particular, students can gain practical programming experience with tools and software libraries commonly used in robotics.

**Workload:**

Lecture with 3 SWS + 1 SWS Tutorial, 6 LP

6 LP corresponds to 180 hours, including

15 \* 3= 45 hours attendance time (lecture)

15 \* 1= 15 hours attendance time (tutorial)

15 \* 6= 90 hours self-study and exercise sheets

30 hours preparation for the exam

**Competency Goals:**

The students are able to apply the presented concepts to simple and realistic tasks from robotics. This includes mastering and deriving the mathematical concepts relevant for robot modeling. Furthermore, the students master the kinematic and dynamic modeling of robot systems, as well as the modeling and design of simple controllers. The students know the algorithmic basics of motion and grasp planning and can apply these algorithms to problems in robotics. They know algorithms from the field of image processing and are able to apply them to problems in robotics. They are able to model and solve tasks as a symbolic planning problem. The students have knowledge about intuitive programming procedures for robots and know procedures for programming and learning by demonstration.

**Organizational issues**

Die Erfolgskontrolle erfolgt in Form einer schriftlichen Prüfung im Umfang von i.d.R. 120 Minuten nach § 4 Abs. 2 Nr. 1 SPO.

**Lecture (V)**  
**On-Site**

**Content**

The lecture presents current work in the field of humanoid robotics, which deals with the implementation of complex sensorimotor and cognitive abilities. Various methods and algorithm, their advantages and disadvantages, as well as the current state of research are discussed.

The following topics are covered: Applications and real world examples of humanoid robots; biomechanical models of the human body, biologically inspired and data-driven methods of grasping, imitation learning and programming by demonstration; semantic representations of sensorimotor experience as well as cognitive software architectures of humanoid robots

**Learning Objectives:**

The students have an overview of current research topics in the field of cognitive and learning robotics using the example of humanoid robotics and are able to categorize and assess current developments in the field of cognitive humanoid robotics.

Students are familiar with the main problem areas of cognitive humanoid robotics and are able to develop solutions on the basis of existing research work.

**Organizational issues**

The assessment is carried out as a written examination (§ 4 Abs. 2 No. 1 SPO) of, in general, 60 minutes.

Workload: 90 h

Recommendations: *Having visited the lectures on Robotics I – Introduction to Robotics and Mechano-Informatics and Robotics is recommended.*

Intended audience: **Module for Mechanical Engineering Master, Mechatronics and Information Technology Master, Electrical Engineering and Information Technology Master**

**Literature****Additional literature**

Scientific publications on the topic are made available on the lecture website.

**11.405 Course: Robotics III - Sensors and Perception in Robotics [T-INFO-109931]**

none.

**Modeled Conditions**

The following conditions have to be fulfilled:

1. The course [T-INFO-101352 - Robotics III - Sensors in Robotics](#) must not have been started.

**Recommendation**

Attending the lecture Robotics I – Introduction to Robotics is recommended.

*Below you will find excerpts from events related to this course:*

**Robotics III - Sensors and Perception in Robotics**

2400067, SS 2025, 2 SWS, Language: English, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

The lecture complements the lecture Robotics I and provides a broad overview of sensors and perception methods used in robotics. The focus is on visual perception, semantic scene interpretation, simultaneous localization and mapping (SLAM) as well as haptic exploration and active perception. The lecture is divided into two parts:

In the first part a comprehensive overview of current sensor technologies is given. A fundamental distinction is made between sensors for the perception of the environment (exteroceptive) and sensors for the perception of the internal state (proprioceptive). The second part of the lecture focuses on the use of exteroceptive sensors in robotics. The topics include tactile exploration and visual data processing, including the basics of feature extraction, segmentation, semantic scene interpretation, simultaneous localization and mapping (SLAM) as well as haptic exploration and active perception.

**Learning Objectives:**

Students can name the main sensor principles used in robotics. They can explain the data flow from physical measurement through digitization to the use of the measured sensor data for feature extraction, state estimation and semantic scene understanding.

Students are able to propose and justify suitable sensor concepts for robotic tasks.

**Organizational issues**

The assessment is carried out as a written examination (§ 4 Abs. 2 No. 1 SPO) of, in general, 60 minutes.

**Content****Media**

Presentations

**Learning content**

The course provides basic knowledge of safety engineering. In particular the basics of health at the working place, job safety in Germany, national and European safety rules and the basics of safe machine design are covered. The implementation of these aspects will be illustrated by examples of material handling and storage technology. This course focuses on: basics of safety at work, safety regulations, basic safety principles of machine design, protection devices, system security with risk analysis, electronics in safety engineering, safety engineering for storage and material handling technique, electrical dangers and ergonomics. So, mainly, the technical measures of risk reduction in specific technical circumstances are covered.

**Learning goals**

The students are able to:

- Name and describe relevant safety concepts of safety engineering,
- Discuss basics of health at work and labour protection in Germany,
- Evaluate the basics for the safe methods of design of machinery with the national and European safety regulations and
- Realize these objectives by using examples in the field of storage and material handling systems.

**Scaling in fluid dynamics**

2154044, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

- Introduction
- Similarity rules (examples)
- Dimensional analysis (Pi-theorem)
- Scaling in differential equations
- Scaling in boundary layers
- Self-similar solutions
- Scaling in turbulent shear layers
- Rotating flows
- Magnetohydrodynamic flows

**Educational objective:** The student can extract non-dimensional number from the characteristic properties of flows. From the insights on scaling laws, the students are qualified to identify the influencing quantities from generic experiments and transfer these to real applications. The students can simplify the governing equations of fluid mechanic appropriately and can interpret the achieved results as a basis for efficient solution strategies.

## Selected Problems of Applied Reactor Physics and Exercises

2190411, SS 2025, 2 SWS, Language: German/English, [Open in study portal](#)

Lecture (V)  
On-Site

### Content

- Nuclear energy and forces
- Radioactive decay
- Nuclear processes
- Fission and the importance of delayed neutrons
- Basics of nuclear cross sections
- Principles of chain reaction
- Static theory of mono energetic reactors
- Introduction to reactor kinetic
- student laboratory

### The students

- have solid understanding of the basic reactor physics
- are able to estimate processes of growth and decay of radionuclides; out of it, they can perform dose calculation and introduce their biological hazards
- can calculate the relationship of basic parameters which are needed for a stable reactor operation
- understand important dynamical processes of nuclear reactors.

Regular attendance: 26 h

self study 94 h

oral exam about 30 min.

## Seminar Application of Artificial Intelligence in Production

2150910, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Seminar (S)  
On-Site**

**Content**

The module AI in Production is designed to teach students the practical, holistic integration of machine learning methods and the application of artificial intelligence in production. The course is based on the phases of the CRISP-DM process with the aim of developing a deep understanding of the necessary steps and content aspects (methods) within the individual phases. In addition to teaching the practice-relevant aspects for integrating the most important methods of machine learning, the focus here is primarily on the necessary steps for data generation and data preparation, as well as the implementation and safeguarding of the methods in an industrial environment.

The lecture “Seminar on the Application of Artificial Intelligence in Production” aims at the practical integration of current methods of machine learning using realistic industrial use cases. The content of the course is based on the holistic, practical implementation of an AI project in production. In doing so, students solve a problem from a production context using methods of data analysis, processing and machine learning.

**Learning Outcomes:**

The students

- are able to independently analyze a practical problem in production with regard to the application of machine learning methods.
- will be able to independently apply common deep learning algorithms to practical data sets, validate them, and analyze the results.
- understand the challenges of using deep learning methods in production.
- will know the main action areas and open research questions for the successful implementation of AI in production and for the implementation of autonomous machines.
- are able to evaluate the results of current deep learning methods and, based on these, to develop and practically apply proposed solutions (from the field of machine learning).

**Workload:**

regular attendance: 21 hours

self-study: 99 hours

**Organizational issues**

Auftaktveranstaltung am 25.04.2025.

Alle nachfolgenden Termine werden über Ilias (<https://ilias.studium.kit.edu/>) bekanntgegeben.

Die Teilnehmerzahl für die Lehrveranstaltung ist begrenzt. Infolgedessen wird ein Auswahlprozess stattfinden. Informationen zur Bewerbung und zum Ablauf der Lehrveranstaltung werden auf der Homepage des wbk (<http://www.wbk.kit.edu/studium-und-lehre.php>) bereitgestellt.

The number of participants for the course is limited. Consequently, a selection process will take place. Information on how to apply and how the course will be run will be provided on the wbk homepage (<https://www.wbk.kit.edu/english/education.php>).

Zur Vertiefung des im Rahmen der Lehrveranstaltung erworbenen Wissens werden die theoretischen Vorlesungseinheiten durch Praxiseinheiten im Umfeld der Karlsruher Forschungsfabrik (<https://www.karlsruher-forschungsfabrik.de>) unterstützt.

The theoretical lectures are complemented by practical lectures in the Karlsruhe Research Factory (<https://www.karlsruher-forschungsfabrik.de/en.html>) to deepen the acquired knowledge.

V

**Seminar Data Mining in Production**

2151643, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Seminar (S)  
On-Site**

**Content**

In the age of Industry 4.0, large amounts of production data are generated by the global production networks and value chains. Their analysis enables valuable conclusions about production and lead to an increasing process efficiency. The aim of the seminar is to get to know production data analysis as an important component of future industrial projects. The students get to know the data mining tool KNIME and use it for analyses. A specific industrial use case with real production data enables practical work and offers direct references to industrial applications. The participants learn selected methods of data mining and apply them to the production data. The work within the seminar takes place in small groups on the computer. Subsequently, presentations on specific data mining methods have to be prepared.

**Learning Outcomes:**

The students ...

- can name, describe and distinguish between different methods, procedures and techniques of production data analysis.
- can perform basic data analyses with the data mining tool KNIME.
- can analyze and evaluate the results of data analyses in the production environment.
- are able to derive suitable recommendations for action.
- are able to explain and apply the CRISP-DM model.

**Workload:**

regular attendance: 10 hours  
self-study: 80 hours

**Organizational issues**

Die Teilnehmerzahl ist auf zwölf Studierende begrenzt. Termine und Fristen zur Veranstaltung werden unter <https://www.wbk.kit.edu/studium-und-lehre.php> bekanntgegeben.

**Seminar for Rail System Technology**

2115009, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Seminar (S)  
On-Site**

**Content**

1. Railway System: railway as a system, subsystems and interdependencies, definitions, laws, rules, railway and environment, economic impact
2. Operation: Transportation, public transport, regional transport, long-distance transport, freight service, scheduling
3. System structure of railway vehicles: structure and major systems of rail vehicles
4. Scientific working: structuring and writing of scientific papers, literature research, scheduling (mile stones), self-management, presentation skills, using the software Citavi for literature and knowledge management, working with templates in Word, giving and taking feedback
5. The learnt knowledge regarding scientific writing is used to elaborate a Seminararbeit. To this the students create a presentation, train and reflect it and finally present it to an auditorium.

**Learning targets:**

- The students become aware of the fundamental relations and interdependencies between rail vehicles, infrastructure and operation in a rail system.
- They overview the technical components of a rail system, in particular rail vehicle technology.
- They are able to use the essential elements of scientific work and present their results in written form and verbal presentation.

**Organizational issues**

Teilnehmerzahl ist auf 10 begrenzt. Die Einführungsveranstaltung findet am 13.11.2024 13.00-15.30 Uhr am Campus Ost, 70.04, R 008 statt. Die Prüfung besteht aus einer schriftlichen Ausarbeitung (Seminararbeit - ca. 20 Seiten Inhalt) und einem Vortrag über die Ausarbeitung. Weitere Infos siehe Institutshomepage [https://www.fast.kit.edu/bst/929\\_11545.php](https://www.fast.kit.edu/bst/929_11545.php).

Max. 10 participants. Examination: Writing a Seminararbeit (ca. 20 pages content), final presentation. Please check the homepage for further information.

**Literature**

Eine Literaturliste steht den Studierenden auf der Ilias-Plattform zum Download zur Verfügung.

A bibliography is available for download (Ilias-platform).

V

**Seminar: Energy Informatics**

2400013, WS 24/25, 2 SWS, Language: German/English, [Open in study portal](#)

**Seminar (S)**  
**On-Site**

**Content**

Energy informatics is a young field of research at the interface of electrical engineering, computer science, economics and law, in which questions about energy systems are dealt with. Issues arising from climate change and the increasing use of renewable energy sources are of particular interest.

In the "Energy Informatics" seminar, we look at selected issues arising from current research. These questions consider, for example, modeling, algorithms or simulations in the context of energy systems.

This seminar is aimed at Master's students in subjects that overlap with energy informatics, for example computer science, mechanical engineering, information systems, econometrics, business engineering or economics engineering. If you have any questions regarding credit transfer, please contact your study program service.

Ideally, students should have an in-depth insight into the subject areas of energy informatics and have basic knowledge of modeling, simulation and algorithms.

**Other participants:** Prof. Dr. Veit Hagenmeyer, T.T.-Prof. Dr. Thomas Bläsius

**Workload:** 4 CP corresponds to approx. 120 hours, approx. 21 hours attending the seminar, approx. 45 hours analyzing and working on the topic, approx. 27 hours preparing and creating the presentation and approx. 27 hours writing the paper.

**Learning objectives:** Based on a given topic, participants identify, collect and evaluate relevant literature. They classify the topic within the subject area of "energy informatics".

Participants prepare a seminar paper and take format specifications into account. Students critically examine other seminar papers and write reviews of the seminar papers of others.

In presentations, the participants present the most important content of their seminar paper in an auditorium-friendly manner and discuss it with the audience.

Exams			
WT 24/25	76T-MACH-105172	<a href="#">Simulation of Coupled Systems</a>	Geimer

**Competence Certificate**

The assessment consists of an oral exam (20 min) taking place in the recess period. The exam takes place in every semester. Re-examinations are offered at very ordinary examination date.

A registration is mandatory, the details will be announced on the webpages of the *Institute of Vehicle System Technology / Institute of Mobile Machines*. In case of too many applications, attendance will be granted based on pre-qualification.

**Prerequisites**

Required for the participation in the examination is the preparation of a report during the semester. The partial service with the code T-MACH-108888 must have been passed.

**Modeled Conditions**

The following conditions have to be fulfilled:

1. The course [T-MACH-108888 - Simulation of Coupled Systems - Advance](#) must have been passed.

**Recommendation**

- Knowledge of ProE (ideally in actual version)
- Basic knowledge of Matlab/Simulink
- Basic knowledge of dynamics of machines
- Basic knowledge of hydraulics

**Annotation**

After completion of course, students are able to:

- build a coupled simulation
- parametrize models
- perform simulations
- conduct troubleshooting
- check results for plausibility

The number of participants is limited.

**Content:**

- Basics of multi-body and hydraulics simulation programs
- Possibilities of coupled simulations
- Modelling and Simulation of Mobile Machines using a wheel loader
- Documentation of the result in a short report

**Literature:**

Software guide books (PDFs)

Information about wheel-type loader specifications

**Workload**

120 hours

<b>V</b>	<b>Simulation of Optical Systems</b> 2105018, WS 24/25, 2 SWS, Language: German, <a href="#">Open in study portal</a>	<b>Lecture (V)</b> <b>On-Site</b>
----------	--	--------------------------------------

**Content**

This lecture gives an introduction into optical system's design. The focus is on the system concept: design for manufacture, reliability in operation, as well as interactions between optical and non-optical system components are considered. Practical aspects of optical systems design like e.g. the consideration of design rules to ensure manufacturability, tolerancing of the optical system to ensure a reliable operation, and the coupling of optical and mechanical simulation tools will also be presented. Application of the acquired techniques will be deepened with the help of three case studies.

**Content:**

- Introduction
- Modeling, simulation, and systems design
- Basics of optics
- Properties of optical materials
- Optical imaging
- Ray tracing
- The optical design process
- Basics of the Finite-Element Method (FEM)
- The FEM design process
- Coupling of simulation tools
- Microoptical sub-systems

**Learning objectives:**

The students...

- know the basics of optical modeling and simulation.
- know the basics of modeling and simulation by means of the Finite-Element Method.
- know the basics of the optical and mechanical design process.
- are able to understand the specifications of optical systems and can use them in optical modeling.
- are able to use design rules.
- are able to conduct basic tolerance analysis.
- are able to assess the need of an inter-domain simulation.

### Simulation der Prozesskette kontinuierlich verstärkter Faserverbundbauteile

2114107, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

Lecture / Practice (VÜ)  
On-Site

### Content

The lecture deals with methods for the calculation of FRP components with continuous fiber reinforcement and provides the necessary understanding of materials and processes. The material behavior of fiber composites is largely determined by the fiber structure. This must be suitably modeled in the single layer and in the multilayer composite in order to be able to reliably predict the deformation and damage behavior of FRP components. In the case of curved components, the fiber structure is only created during the manufacturing process, specifically during the forming (draping) of the two-dimensional semi-finished products into a three-dimensional structure (preform). In addition, there is the mold filling process, in which the preform is infiltrated with a reactive resin system, as well as the curing process, which can lead to distortion and residual stresses. In addition to the simulation of structural behavior, process simulation is therefore an essential building block for the holistic development of fiber composite components. The main contents are:

- Virtual Process Chain
- Draping simulation: draping behavior of textiles  
draping process, kinematic draping simulation, FE draping simulation
- Molding simulation: Principles of fluid mechanics, viscosity and permeability, molding simulation within the CAE chain
- Curing simulation and distortion: process of crosslinking, resin kinetics, thermomechanics, internal stresses, part distortion
- Structural simulation: Modelling of multilayer laminate, influence of manufacturing effects

### Study goals:

The students understand that the microstructure of fibre reinforced plastics (FRP) and the resulting material behavior is mainly influenced by the manufacturing process. They know the simulation steps needed to virtually describe the process chain of RTM (resin transfer molding) parts. They are able to explain the principal mechanical processes of draping, molding and curing and can name their influences on the structural behavior.

### Workload:

**Simulation with Lumped Parameters**

2114071, SS 2025, 2 SWS, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

Learning objectives (qualification objectives):

After completing this part of the course, students will be able to evaluate how a simulation with concentrated parameters can be used sensibly and which simulation methods are suitable for a given problem. They can create a model for a problem and can explain and implement algorithms for solving a model. You will acquire in-depth knowledge of how a system can be modelled and parameterized with concentrated parameters. You will be able to carry out simulation studies, evaluate simulation results and recognize and avoid errors in the simulation.

Contents:

The basics of discrete-time modeling are taught using the example of simulation with concentrated parameters. For this purpose, modeling in the disciplines of mechanics, electrics and hydraulics is shown by way of example and analogies are drawn. Furthermore, possibilities for simulation coupling of the disciplines are shown. The students solve exemplary tasks with the help of simulation and briefly summarize the solutions in a report.

Recommended are:

Basic knowledge of Matlab/Simulink and hydraulics.

Knowledge of the dynamics of mechanical systems and the fundamentals of electrical engineering is assumed.

## Simulator Exercises Combined Cycle Power Plants

2170491, SS 2025, 2 SWS, Language: English, [Open in study portal](#)

**Practical course (P)  
On-Site**

### Content

The training objective of the course is the qualification for a research-related professional activity in power plant engineering. On the basis of the learned fundamentals in thermodynamics, in instrumentation and control engineering, as well as on the basis of the acquired knowledge of design of combined cycle plants, the participants can operate a real combined cycle power plant. This application creates a deeper understanding of the dynamic processes of the power plant, the specific importance of the plant components and the limits of the load capacity of the components. Participants can optimize normal operation and analyze incidents. They can work self-organized and reflexive. They have communicative and organizational skills in teamwork, even under major technical challenges.

Start-up of the power plant from scratch; load changes and shut down; dynamic response of the power plant in case of malfunctions and of sudden load changes; manual operation of selected components.

### Organizational issues

Termine zum Simulatorpraktikum werden in der Vorlesung und per ILIAS am Semesterbeginn mit den Studenten vereinbart.

Appointments for the simulator internship are arranged with the students in the lecture and via ILIAS at the beginning of the semester.

### Literature

Vorlesungsskript und weitere Unterlagen der Vorlesung Gas- und Dampfkraftwerke.

Slides and other documents of the lecture Combined Cycle Power Plants.

**Smart Resilience Technologies I**

2130100, SS 2025, 2 SWS, Language: English, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content****Abstract:**

Amid growing disruptions from climate change, cyber threats, and supply chain interruptions, resilience has become essential for sustainable transformation. The lecture **Smart Resilience Technologies I**, developed with SAP, emphasizes the foundational aspects of resilience and its supporting technologies.

The course explores how tools like digital twins, generative AI, and meta-agent-based frameworks systems to identify vulnerabilities on a systemic level, predict impacts, and implement adaptive strategies. Participants will learn to balance, sustainability and resilience metrics, addressing complex challenges and aligning with requirements like the Critical Entity Resilience Directive.

This foundational lecture equips attendees with the expertise to make resilience a key driver of sustainability, enabling organizations and businesses to adapt and thrive in an era of increasing disruptions.

**Smart Resilience Technology Part II**

2130101, SS 2025, 2 SWS, Language: English, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

Amid growing disruptions from climate change, cyber threats, and supply chain interruptions, resilience has become essential for sustainable transformation. The **Smart Resilience Technologies II** lecture, developed in collaboration with SAP, emphasizes the practical technological implementation of resilience strategies.

Building on the foundational knowledge from **Smart Resilience Technologies I**, this course introduces the **FRAMESS framework** (Framework for Systemic Risk Analysis and Exploring Sustainable Solutions), developed at KIT. FRAMESS enables the creation of adaptable digital twins that simulate and analyze complex systems under various disruptive scenarios. Participants will gain hands-on experience with SAP technologies for data modeling, process and dependency modeling, and implementing system simulations to evaluate resilience under disruptions.

The practical focus of the course involves a team-based challenge where participants ideate, prototype, test, and present solutions based on a real-world use case. Using FRAMESS and advanced methods like AI and Reinforcement Learning, attendees will develop practical strategies to enhance resilience, ensuring businesses and critical systems can adapt and thrive amidst disruptions.

This lecture equips attendees with the tools and methodologies to turn theoretical knowledge into practical, technology-driven solutions for complex resilience challenges.

**Solar Thermal Energy Systems**

2189400, WS 24/25, 2 SWS, Language: English, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

The course deals with fundamental aspects of solar energy

1. Introduction to solar energy – global energy panorama
2. Solar energy resource-  
Structure of the sun, Black body radiation, solar constant, solar spectral distribution  
Sun-Earth geometrical relationship
3. Passive and active solar thermal applications.
4. Solar thermal systems- solar collector-types, concentrating collectors, solar towers,  
Heat losses, efficiency
5. Selected topics on thermodynamics and heat transfer which are relevant for solar systems.
6. Introduction to Solar induced systems: Wind , Heat pumps, Biomass , Photovoltaic
7. Energy storage

The course deals with fundamental aspects of solar energy. Starting from a global energy panorama the course deals with the sun as a thermal energy source. In this context, basic issues such as the sun's structure, blackbody radiation and solar-earth geometrical relationship are discussed. In the next part, the lectures cover passive and active thermal applications and review various solar collector types including concentrating collectors and solar towers and the concept of solar tracking. Further, the collector design parameters determination is elaborated, leading to improved efficiency. This topic is augmented by a review of the main laws of thermodynamics and relevant heat transfer mechanisms.

The course ends with an overview on energy storage concepts which enhance practically the benefits of solar thermal energy systems.

The students get familiar with the global energy demand and the role of renewable energies learn about improved designs for using efficiently the potential of solar energy gain basic understanding of the main thermal hydraulic phenomena which support the work on future innovative applications will be able to evaluate quantitatively various aspects of the thermal solar systems.

Teaching Content:

1. Crystal Defects and Mechanisms of Diffusion
2. Microscopic Description of Diffusion
3. Phenomenological Treatment
4. Diffusion Coefficients
5. Diffusion Problems; Analytical Solutions
6. Diffusion with Phase Transformation
7. Kinetics of Microstructural Transformations
8. Diffusion at Surfaces, Grain Boundaries and Dislocations
9. Numerical treatment of diffusion controlled phase transformations

Recommendations:

knowledge of the course "Fundamentals in Materials Thermodynamics and Heterogeneous Equilibria" (Seifert); Basic course in materials science and Engineering; Basic course in mathematics; physical chemistry

regular attendance: 22 hours

self-study: 98 hours

The students acquire knowledge about:

- diffusion mechanisms
- Fick's laws
- basic solutions of the diffusion equation
- evaluation of diffusion experiments
- interdiffusion processes
- the thermodynamic factor
- parabolic growth of layers
- formation of pearlite
- microstructural transformations according to the models of Avrami and Johnson-Mehl
- TTT diagrams

*Below you will find excerpts from events related to this course:***Hydrodynamic Stability: From Order to Chaos**2154437, SS 2025, 2 SWS, Language: German/English, [Open in study portal](#)**Lecture (V)  
Blended (On-Site/Online)****Content**

The students can apply the analytic and numerical methods for an evaluation of stability properties of hydrodynamic systems. The are qualified to discuss the characteristic influence of parameter changes (e.g. Reynolds number) on the calculated results with respect to the flow character and properties (e.g. transition laminar/turbulent flow).

Increasing a control parameter of a thermohydraulic system, e.g. the Reynolds number, the initial flow pattern (e.g. stationary flow) can be replaced by a different pattern (e.g. turbulent flow).

Typical hydrodynamic instabilities are summarized in the lecture.

The systematic analysis of thermohydraulic stability problems is developed for the case of Rayleigh-Bernard convection (fluid layer heated from below) and selected examples from fluid dynamics.

Covered is:

- linear stability analysis: determine limiting control parameter value up to which the basic flow pattern is stable against small perturbations.
- nonlinear reduced order modeling, capable to characterize more complex flow patterns
- Lorenz system: a generic system exhibiting chaotic behavior

---	--	------------------------

## Content

The lecture series provides an insight into the main functional areas of a global company and is based on close interaction with the students. Top managers from Bosch explain the technical and business processes of a company using examples from their business areas. The tasks of the engineer working at an innovative and globally active automotive supplier is addressed. These range from technical competence and an understanding of economic aspects to questions of personnel responsibility.

In addition, insights are provided into the careers of the Bosch managers giving the lectures. The focus of the course is therefore not only on business processes but also on first-hand accounts of challenges, successes, failures and product and process innovations.

The topics in detail are:

- Introduction, Strategy, Innovation
- R&D, Product Development Process
- Production
- Quality Assurance
- Market, Marketing, Sales
- Aftermarket, Service
- Finance, Controlling
- Logistics
- Purchasing, Supply Chain
- IT
- HR, Leadership, Compliance

## Learning Outcomes:

The students ...

- are able to deduce, understand and assess the structure of a global operating enterprise.
- are capable to identify and compare the work flows and processes within a global operating enterprise.
- are able to recognize and assess the problems within interfaces between functional and organizational units which are identified by the experts. Furthermore the students can develop solutions based on this knowledge in order to overcome these problems.

**Strategic Decision-Making in Global Production Network Design: A Seminar on  
Optimization and Simulation**Lecture (V)  
On-Site2150658, SS 2025, 2 SWS, Language: English, [Open in study portal](#)

**Content**

The lecture "Strategic Decision Making in the Design of Global Production Networks: A Seminar in Optimization and Simulation" offers students a comprehensive insight into the application of quantitative models from operations research in global production networks. The course places special emphasis on practical applications and allows students to deepen their skills through a real-world use case during the semester.

The classroom sessions serve to convey important basics and to introduce and present the practice-relevant cases. In the self-study phase, the topics covered are worked on in greater depth. The curriculum covers various phases. Optimization techniques for network design are covered first, followed by simulation methods for network management. Subsequently, open questions are dealt with, e.g. from the consideration of uncertainty, sustainability aspects or the search for the overall optimum in the production network.

The students are divided into small groups to work together on the questions. The methods taught in the course are implemented in python. In order to strengthen the students' presentation skills, regular presentations of interim results are planned. The progress made is supported by feedback and interaction with an internationally operating consulting firm.

The practical orientation of the course, combined with the application of quantitative models and the use of Python, enables students to prepare holistically for complex challenges in global production.

**Learning Outcomes:**

The students are able to

1. **put concepts of global production into practice:**
  - Understand how global production networks can be implemented in real business scenarios.
  - Develop and implement strategies for adapting global production networks to specific business requirements.
2. **in-depth knowledge and use of optimization in global production:**
  - Develop an in-depth understanding of various optimization techniques in global production processes.
  - Apply optimization models to complex production networks and continuously improve them.
3. **approach to improving network configuration, site selection and transportation routes:**
  - Understand methods to evaluate and optimize production networks.
  - Effectively plan and improve site selection decisions and transportation routes.
4. **deepen knowledge and use of simulations in global production:**
  - Understand how simulations can be used as a tool to analyze and optimize global production processes.
  - Gain experience in the application of simulation techniques for modeling and analyzing production processes.
5. **approach to improving delivery reliability:**
  - Develop and implement strategies to improve delivery reliability.
  - Optimize processes that can affect delivery reliability.
6. **consider uncertainties, aspects of sustainability and multidimensionality:**
  - Recognize and manage uncertainties in global production environments.
  - Consider sustainability aspects and multidimensional challenges when making decisions in global production.
7. **linking results and models:**
  - Link models and analytical results to create holistic solutions to complex problems in global production.
  - Strengthen the ability to iteratively improve models based on real-world results.
8. **presentations to management:**
  - Present complex global manufacturing concepts to management in an understandable and persuasive manner.
  - Build confidence in the use of visual aids and effective communication techniques in front of management levels.

**Workload:**

regular attendance: ~ 30 hours

self-study: ~ 99 hours

**Structural Analysis of Composite Laminates**

2113106, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

Lecture / Practice (VÜ)  
On-Site

**Content**

To reduce fuel consumption and CO<sub>2</sub> emissions, lightweight materials such as fiber-reinforced plastics (FRP) are increasingly being used in vehicle construction. The course is dedicated to the calculation of the material and structural behavior of FRP components with the following contents:

- Micromechanics and homogenization of fibre-matrix-composite
- Macromechanical behavior of individual layer
- Behaviour of multilayer laminate
- FE formulations
- Failure criteria
- Damage analysis
- Dimensioning of FRP parts

**Aim of this lecture:** The students can explain the mechanical correlation between fibre-matrix-configuration and macroscopic material behavior. They are able to formulate the stress-strain / force-strain relation of an individual layer and of a multilayer laminate by approaches of first and higher order. The students can name, evaluate, and apply failure criteria and approaches to model damage progression. They can name and explain simple dimension strategies to design FRP components.

**Structural Materials**

2174580, WS 24/25, 4 SWS, Language: German, [Open in study portal](#)

Lecture / Practice (VÜ)  
On-Site

**Content**

Lectures and tutorials on the topics:

- basic loading types and superimposed loadings
- high-temperature loading
- influence of notches
- uniaxial, multiaxial and superimposed cyclic loading
- notch fatigue
- structural durability
- impact of residual stresses
- basic principles of materials selection
- dimensioning of components

**learning objectives:**

The students are able to select materials for mechanical design and to dimension structural components according to the state of the art. They are familiar with the most important engineering materials. They can assess these materials on base of their characteristic properties and and they can match property profiles and requirement profiles. The dimensioning includes complex situations, such as multiaxial loading, notched components, static and dynamic loading, componetns with residual stresses and loading at high homologous temperatures.

**Lecture (V)**  
**On-Site**

**Content**

oral examination (about 30 min), no tools or reference materials

Teaching Content:

Introduction

Basics

Plasma diagnostics

Particle flux analysis

Sputtering and ion implantation

Computer simulations

Properties of materials, thin film deposition technology,  
thin film analysis and modelling of superhard materials

Amorphous hydrogenated carbon

Diamond like carbon

Diamond

Cubic Boronitride

Materials of the system metall-boron-carbon-nitrogen-silicon

regular attendance: 22 hours

self-study: 98 hours

Superhard materials are solids with a hardness higher than 4000 HV 0,05. The main topics of this lecture are modelling, deposition, characterization and application of superhard thin film materials.

Recommendations: none

**Lecture (V)**  
**On-Site**

**Content**

understanding of sustainability objectives and their role in product development, the interaction between technical products and their environment, the holistic approach and the equality of economic, social and environmental aspects and environmental aspects

skills for life-cycle product design using the example of complex automotive components such as airbag systems and other current products

understanding of product environmental stresses with relevancy to praxis at the example of technology-intensive components, robustness and durability of products as the basis for a sustainable product development, development of skills for the application of environmental simulation during the process of development of technical products

delivery of key skills such as team skills / project / self / presentation based on realistic projects

The goal of the lecture is to convey the main elements of sustainable product development in the economic, social and ecological context.

The students are able to ...

- identify und describe the sustainability objectives and their role in product development, the interaction between technical products and their environment, the holistic approach and the equality of economic, social and environmental aspects and environmental aspects.
- discuss the skills for life-cycle product design using the example of complex automotive components such as airbag systems and other current products.
- understand the product environmental stresses with relevancy to praxis at the example of technology-intensive components, robustness and durability of products as the basis for a sustainable product development, development of skills for the application of environmental simulation during the process of development of technical products.
- develop skills such as team skills / project / self / presentation based on realistic projects.

### System Integration in Micro- and Nanotechnology I

2106033, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

### Content

#### Content:

- Introduction to system integration (fundamentals)
- Brief introduction to MEMS processes
- Flexures
- Surfaces and plasma processes for surface treatment
- Adhesive bonding in engineering
- Mounting techniques in electronics
- Molded Interconnect devices (MID)
- Functional Printing
- Low temperature cofired ceramics in system integration

### Learning objectives:

The students acquire basic knowledge of challenges and system integration technologies from mechanical engineering, precision engineering and electronics.

## System Integration in Micro- and Nanotechnology 2

2105040, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

### Content

Introduction to system integration (novel processes and applications)

Assembly of hybrid microsystems

Packaging processes

Applications:

- Lab-on-chip systems
- Microoptical systems
- Silicon Photonics

Novel integration processes:

- Direct Laser Writing
- Self Assembly

### Learning objectives

The students acquire knowledge of novel system integration technologies and their application in microoptic and microfluidic systems.

V

**Systematic Materials Selection**

2174576, SS 2025, 3 SWS, Language: German, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

Important aspects and criteria of materials selection are examined and guidelines for a systematic approach to materials selection are developed. The following topics are covered:

- Information and introduction
- Necessary basics of materials
- Selected methods / approaches of the material selection
- Examples for material indices and materials property charts
- Trade-off and shape factors
- Sandwich materials and composite materials
- High temperature alloys
- Regard of process influences
- Material selection for production lines
- Incorrect material selection and the resulting consequences
- Abstract and possibility to ask questions

**learning objectives:**

The students are able to select the best material for a given application. They are proficient in selecting materials on base of performance indices and materials selection charts. They can identify conflicting objectives and find sound compromises. They are aware of the potential and the limits of hybrid material concepts (composites, bimerials, foams) and can determine whether following such a concept yields a useful benefit.

**requirements:**

Wilng SPO 2007 (B.Sc.)

The course Material Science I [21760] has to be completed beforehand.

**Technical Acoustics**

2158107, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

Basics of acoustics

Perception and weighting of noise (human hearing)

Description of acoustic parameters, level notation

Noise propagation

Acoustical measurement techniques

regular attendance: 28 hours

self-study: 60 hours

preparation for exam: 30 hours

Oral examination

Duration: 30 minutes

No tools or reference materials may be used during the exam.

WARNING for ETIT students: the recognition is not possible because the Faculty of Electrical Engineering and Information Technology also offers a "Technical Acoustics" course.

Students get to know the basics of technical acoustics in general. Application of the knowledge in different fields of engineering.

Students learn physical basics of acoustics and human perception. Physical-empirical laws for determination of sound and noise levels of various emission and immission situations will be worked out or derived. Further on general sound measurement methods of machinery will be taught.

Students are able to understand mechanisms of sound origin, propagation and reduction, as well as measuring technics

### Technical energy systems for buildings 1: Processes & components

2157200, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
On-Site

### Content

Introduction to heating and cooling technologies for buildings, solar energy utilization in buildings (solar radiation, solar thermal energy, photovoltaics) and to energy storage in buildings (thermal and electric storage technologies). Topics covered:

- Burners, condensing and non-condensing boilers
- Cogeneration units for use in buildings
- Heat transformation: Fundamentals, vapor compression, absorption, adsorption
- Solar energy: Radiation, solar thermal collectors, photovoltaics
- energy storage in buildings: thermal and electric storage

### Learning objectives:

Students know relevant technical components of energy supply systems in buildings (heating and cooling, dehumidification). They know the energy conversion processes associated with these components and can estimate their energy efficiencies as well as the most important factors influencing efficiency.

Students are familiar with the underlying physics (mostly thermodynamics) of the relevant processes. They can derive relevant figures of merit from these principles. They know the degree of technological development for the various processes and components and are aware of current research and development objectives in this field.

Oral exam: about 25 min.

No tools

**Technical energy systems for buildings 2: System concepts**  
2158201, SS 2025, 2 SWS, Language: German, [Open in study portal](#)**Lecture (V)**  
**On-Site****Content**

Introduction of relevant figures of merit for technical energy systems in buildings. Description of different system concepts for energy supply of buildings (heating, cooling, dehumidification) and evaluation according to figures of merit. Systems covered include

- Heat pumps and heat pump systems including combination with solar thermal energy
- cogeneration and trigeneration system (heating, cooling, power)
- Solar thermal systems: Domestic hot water, heating support, cooling and dehumidification
- District heating systems including solar thermal heat
- Photovoltaics and heat pump systems including thermal and battery storage
- Grid-reactive building technology: Smart-Metering, Smart Home, Smart Grid

Learning outcomes:

Students are able to develop system concepts for technical energy systems in buildings and to rationally design such systems. They know the relevant figures of merit for an energy-related as well as an economical or combined evaluation of systems, and know how to employ these figures of merit in sizing systems and components. Students are able to employ plausibility checks and to give rough estimates on building energy concepts and they know which technologies can be combined for highly efficient system combinations.

Workload: 30 hours course attendance, 90 hours self-study

**Technology of steel components**

2174579, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

Meaning, Development and characterization of component states  
 Description of the influence of component state on mechanical properties  
 Stability of component states  
 Steel manufacturing  
 Component states due to forming  
 Component states due to heat treatments  
 Component states due to surface hardening  
 Component states due to machining  
 Component states due to mechanical surface treatments  
 Component states due to joining  
 Summarizing evaluation

**learning objectives:**

The students have the background to evaluate the influence of manufacture processes on the compound state of metallic compounds. The students can assess the influence and the stability of compound state under mechanical load. The students are capable to describe the individual aspects of interaction of the compound state of steel components due to forming, heat treatment, mechanical surface treatment and joining processes.

**Ten lectures on turbulence**

2189904, WS 24/25, 2 SWS, Language: English, [Open in study portal](#)

**Lecture (V)**  
**Blended (On-Site/Online)**

**Content****Contents:**

The course is aimed of giving the fundamentals of turbulence theory, modelling and simulation. Governing equations and statistical description of turbulence are introduced. Reynolds equations, Kolmogorov's theory and scales of turbulent flows are discussed. Homogeneous and isotropic turbulence. Turbulent free-shear flows and wall-bounded turbulent flows are discussed. Turbulence modelling approaches and simulation methods are introduced.

- 1 Introduction
- 2 Turbulent transport of momentum and heat
- 3 Statistical description of turbulence
- 4 Scales of turbulent flows
- 5 Homogeneous turbulent shear flows
- 6 Free turbulent shear flows
- 7 Wall-Bounded turbulent flows
- 8 Turbulence Modelling
- 9 Reynolds Averaged Navier-Stokes (RANS) Simulation Approach
- 10 Large Eddy Simulation (LES) Approach

**Objectives:**

At the completion of this course, students

- are able to understand fundamentals of statistical fluid mechanics, turbulence theory and turbulence modelling
- are able to derive RANS and LES transport equations
- get working knowledge of modelling techniques that can be used for solving engineering heat and mass transfer problems.
- able to formulate an own turbulence model and implement it into the opensource computational fluid dynamics software OpenFOAM.

V

**The Circular Factory**

2150620, SS 2025, 4 SWS, Language: English, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

New, innovative economic systems are needed to decouple resource consumption from wealth. New, innovative economic systems are needed to decouple resource consumption from prosperity. In this lecture, students learn about the relevance of such systems of circular value creation. The main focus is on implementation by means of a so-called circular factory, which should enable a new life cycle for used products. Ideally, this is done today by upgrading the used product to the product generation currently in production. This shows the complex field of tension in which the topics of this course are embedded. The freedom of product development is restricted by the constraint of product upgrades and new paradigms are needed. The planning and control of products by the circular factory, including the associated logistics concepts, is complicated by the used condition of the returns. This must be measured and evaluated in order to enable a functional statement of the reprocessed product in a new life cycle. Not least, it requires appropriate (robotic) automation concepts for the disassembly of used products and their reprocessing, which must be specifically designed in high-wage countries in order to operate and establish the overall process economically.

The content of the course addresses and deals with the specific problems and solutions that arise in the realization of circular factories. The following topics are addressed in chronological order:

- An overview of the circular economy in general and different strategies to reduce the consumption of natural resources (R-strategies).
- Comprehensive overview of remanufacturing and presentation of challenges and solutions in the planning and control of disassembly and remanufacturing systems.
- Guidelines and constraints in the design, development and validation of sustainable products.
- Fundamentals of metrological assessment and evaluation of returning used products in the circular factory to enable a new life cycle.
- Methods for data-driven learning from human disassembly to enable automated robot-based automation.
- Processing technology solutions for the reprocessing of used products.
- Intralogistics and handling of recyclable products.

The lecture is complemented by practical items. Real-life industrial problems are presented and discussed in order to reinforce students' understanding of the relevance of the theoretical content and to enable a thorough practical orientation.

**Learning Outcomes:**

The students ...

- can name dimensions of circularity and circular economy methods (e.g., repair, refurbish, recycle) and describe them in detail.
- can describe challenges in planning and control circular factories, including remanufacturing networks and disassembly systems.
- are able to apply guidelines for designing circular products.
- distinguish data acquisition techniques for metrologically assessing returned products and apply uncertainty-driven product modeling in circular production systems.
- have methodical knowledge on learning from human observation and disassembly automatization and apply this knowledge to new problem cases.
- can describe reprocessing methods, including reconditioning and material characterization.
- understand the challenges in intralogistics for circular products.

After completing this course, students are able to understand the challenges of establishing a circular economy. They are also able to evaluate possible solutions and assess them in relation to these challenges. In particular, students are ultimately able to understand circular production in a circular factory holistically and to relate it to existing concepts in industrial practice.

**Solar Thermal Energy Systems**

2189400, WS 24/25, 2 SWS, Language: English, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

The course deals with fundamental aspects of solar energy

1. Introduction to solar energy – global energy panorama
2. Solar energy resource-  
Structure of the sun, Black body radiation, solar constant, solar spectral distribution  
Sun-Earth geometrical relationship
3. Passive and active solar thermal applications.
4. Solar thermal systems- solar collector-types, concentrating collectors, solar towers,  
Heat losses, efficiency
5. Selected topics on thermodynamics and heat transfer which are relevant for solar systems.
6. Introduction to Solar induced systems: Wind , Heat pumps, Biomass , Photovoltaic
7. Energy storage

The course deals with fundamental aspects of solar energy. Starting from a global energy panorama the course deals with the sun as a thermal energy source. In this context, basic issues such as the sun's structure, blackbody radiation and solar-earth geometrical relationship are discussed. In the next part, the lectures cover passive and active thermal applications and review various solar collector types including concentrating collectors and solar towers and the concept of solar tracking. Further, the collector design parameters determination is elaborated, leading to improved efficiency. This topic is augmented by a review of the main laws of thermodynamics and relevant heat transfer mechanisms.

The course ends with an overview on energy storage concepts which enhance practically the benefits of solar thermal energy systems.

The students get familiar with the global energy demand and the role of renewable energies learn about improved designs for using efficiently the potential of solar energy gain basic understanding of the main thermal hydraulic phenomena which support the work on future innovative applications will be able to evaluate quantitatively various aspects of the thermal solar systems.

**Thermal-Fluid-Dynamics**

2189423, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**  
**Content**

- Fundamentals of flows and heat transfer
- Dimensionless parameters of thermal fluid dynamics
- Velocity and temperature laws in boundary layers
- Convective heat transfer of external and internal flows
- Heat transfer analogies (Prandtl-, von Kármán, Martinelli,...)
- Methods for enhancing heat transfer
- Strategies and methods for investigation of thermal-hydraulics in R&D

The lecture provides an overview of momentum and energy transport as occurring in power engineering components and heat exchangers. On the basis of the conservation equations and the fundamentals of thermal-hydraulics, dimensionless parameters for forced and free convection are evolved. Flows close to walls play a crucial role for the convective heat transfer and for heat exchanger components. Thus, with scaling rules the laminar and turbulent thermal boundary layer equations are introduced. In the following, velocity and temperature laws of the wall as a basis for analogies and models of computational tools are discussed and the influence of roughness and surface design are shown. Concepts of state-of-the-art turbulence modelling and their applicability for different conditions or different heat transfer fluids (e.g. liquid metals, gas, oil) are described. Analogies and correlations for internal and external forced convection are developed by means of approximation concepts. Design options to enhance the efficiency and effectiveness of heat exchangers are discussed.

The objectives of the lecture are the fundamentals of thermal-hydraulics for describing and modelling convective fluid flow as occurring in power engineering components. A major objective is the description of the convective heat transfer for external and internal flows. A key issue is the transfer of analytic models and empirical results into "state of the art" computational tools and their validation by advanced experimental methods. Within the scope of the course, the students learn (a) to develop differential equation for thermal-hydraulic problems and to describe the thermal flow field by means of dimensionless parameters, (b) to transfer a real problem to an experiment or computational model, (c) to develop analogies and correlations for heat transfer processes of forced convection, (d) to select adequate computational methods/models, (e) to evaluate and select experiments including measurement techniques with adequate instrumentation for thermal-hydraulic problems and (f) to know design option for an efficient and effective heat exchange.

**Content**

- (i) Climate change and consequences (welt bulb temperature and human limits, cooling water heating and influence on power plants, water loading in warmer air and weather)
- (ii) Power cycles (Efficiency of "classical" processes at higher pressures, Organic Rankine cycles for low-temperature heat sources, supercritical cycle processes (MoNiKa), carbon-capture cycles (Allam-cycle), heat pumps)
- (iii) Hydrogen as an energy carrier for sector coupling (basic principles of production, use, safety)
- (iv) Properties and behaviour of fluids at high pressures (high-pressure processes and hydrogen: phase diagrams, supercritical pseudo-evaporation processes and phase interfaces, Widom line, material models (ideal gas, incompressible, real gas state equations and their solution, etc.).

V

**Mechanical Properties of Nanomaterials and Microsystems**

2178420, SS 2025, 2 SWS, Language: English, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

1. Introduction: Application and properties of micro- and nanosystems; Overview on size effects
2. Fundamentals: Dislocation plasticity (definition of a dislocation; dislocation density, mobility, dislocation sources, statistical aspects incl. SSDs and GNDs).
3. Single crystal plasticity: mechanical and microstructure characterization, mechanisms and their size dependence.
4. Interface plasticity: Compatibility, slip transfer mechanisms, expected size effects.
5. Modelling of mechanisms causing size effects in crystals and at grain boundaries, e.g. dislocation dynamics.
6. Thin film materials: synthesis, characterization and mechanical properties.
7. Nanocrystalline materials: Synthesis, outstanding mechanical properties
8. Elektro-mechanical conversion: piezo-resistive, piezo-elektric, elektrostatic, ...
9. Actuation: inverse piezoelectric effect, shape-memory, electromagnetic, ...

The students know and understand size and scaling effects in micro- and nanosystems based on the fundamental microstructure mechanisms at play. They can describe the mechanical behavior of nano- and microstructured materials and analyze and explain the origin for the differences compared to classical material behavior. They are able to explain suitable processing routes, experimental characterization techniques and adequate modelling schemes for nano- and microstructured materials. They also understand the relevance of mechanical phenomena in small dimensions and can judge how they determine material processing as well the performance and the design of microsensors and microactuators.

### Thin Films – Preparation, Structure, Thermodynamics

2173573, WS 24/25, 2 SWS, Language: English, [Open in study portal](#)

Lecture (V)  
On-Site

### Content

This lecture addresses the foundations of thin film preparation, microstructure and specific thermodynamic properties. The students know basics of UHV (Ultra-High-Vacuum) techniques and basic methods to characterize physical and mechanical properties of thin films. They know different methods of thin film preparation and can denominate their respective pros and cons. The students are familiar with the different nucleation and growth modi and with the epitaxy of thin films with the substrate, and they can denominate and classify the resulting microstructures of the films. The students can describe and motivate principal differences in the physical properties of bulk materials and thin films. They know how these differences affect the stability of thermodynamic phases of alloys and how this can be utilized to tune thin film properties.

**Tires and Wheel Development for Passenger Cars**

2114845, SS 2025, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
On-Site

**Content**

1. The role of the tires and wheels in a vehicle
2. Geometrie of Wheel and tire, Package, load capacity and endurance, Book of requirement
3. Mobility strategy, Minispare, runflat systems and repair kit.
4. Project management: Costs, weight, planning, documentation
5. Tire testing and tire properties
6. Wheel technology including Design and manufacturing methods, Wheeltesting
7. Tire pressure: Indirect and direct measuring systems
8. Tire testing subjective and objective

Learning Objectives:

The students are informed about the interactions of tires, wheels and chassis. They have an overview of the processes regarding the tire and wheel development. They have knowledge of the physical relationships.

----------	---	--

**Content**

The lecture covers the basics of the tools necessary to work in the fields of artificial intelligence and high performance computing.

In particular, the framework conditions and the infrastructure provided by KIT will also be addressed.

The following topics and issues will be covered:

- **Hardware and operating system**  
Which (relevant) components does a computer have? How can AI applications be executed with different operating systems (Windows, MacOS, Linux)? How can supercomputers be accessed from different operating systems?
- **Command line**  
What is the command line and why does it (still) exist? What possibilities do the different operating systems offer to access the command line? Which shells exist and which are typical on HPC facilities? What are the basic commands to get around on a supercomputer?
- **Remote Access**  
How to access a supercomputer, what are the types of authentication? How do you set up SSH keys and what forms of 2-factor authentication are common? How does a file transfer between supercomputer and local computer work?
- **Supercomputers and HPC**  
How is a supercomputer different from regular PCs? Which HPC resources does KIT offer? How are they accessed and what are the special features of the KIT infrastructure compared to other systems? What infrastructure is available statewide and nationally, for what purposes? How must software be designed to be compatible with supercomputers?
- **Version Control**  
What is it and why is it needed? What code hosting services exist? How does one access the Gitlab instance operated by KIT? What CI/CD capabilities exist at KIT?
- **Editors**  
How to edit program code, locally or remotely? What are the possibilities of Visual Studio Code to debug AI applications or HPC workflows on KIT supercomputers? How to develop code with code-server on compute nodes? How can documentation be done? What is the current state of pair programming with AI?
- **Python and Jupyter**  
Which Python distributions exist? Which ones are suitable for KIT HPC resources? How can Python packages be installed and used? What are Virtual Environments and what are they needed for? How can machine learning applications be developed with Jupyter, locally and remotely?
- **Machine Learning**  
What are the typical software packages needed for AI applications? How are they installed and used? What is a typical workflow to develop/use ML applications? What are accelerators, what specialized hardware does KIT infrastructure have?
- **Remote Visualization**  
How to use graphical applications on remote computers? What are the possibilities of remote visualization? Using Paraview as an example, how can a flow simulation be graphically evaluated interactively/non-interactively?
- **Special topics**  
What are containers and virtual machines? What are the benefits of containers especially for Machine Learning applications? Which container solutions can be used on KIT supercomputers? What is WSL 2? Which (commercial) cloud services exist for HPC and AI? Which cloud services are available at KIT for free?

Learning objectives

A major learning goal of the lecture is to provide an overview of available and suitable software tools (editors, access options, version management, infrastructure (at KIT)) for HPC and AI. Any existing fear of contact with the Linux operating system and the seemingly complex use of supercomputers will be eliminated. After successful attendance of the lecture, the students will be able to work on theses that touch on the topics of Artificial Intelligence or High Performance Computing.

Performance assessment

### Competence Certificate

The assessment consists of an written exam taking place in the recess period (90 min).

### Prerequisites

none

### Recommendation

Basic knowledge in mechanical engineering.

**Annotation****Learning Outcomes**

After completion of the course the Students know:

- important problems in agritechnological developments
- Customer requirements and their implementation in tractors
- Tractor technology in width and depth

**Content**

Tractors are one of the most underestimated vehicles in regard to performance und technics. Almost none vehicle is as multifunctional and fulfilled with high-tech as a tractor. Automatic guidance, special chassis suspension or special concepts of power trains are one of the topics where tractors are in leading position in technologies. During the lecture an overview about the design and construction and application area is given. A close look will be taken on the historical background, legal requirements, ways of development, agricultural organizations and the process of development itself.

In detail the following topics will be dealt with:

- agricultural organization / legal requirements
- history of tractors
- tractor engineering
- tractor mechanics
- chassis suspension
- combustion engine
- transmission
- interfaces
- hydraulics
- wheels and tyres
- cabin
- electrics and electronics

**Literature**

**Tribology**

2181114, WS 24/25, 5 SWS, Language: German, [Open in study portal](#)

Lecture / Practice (VÜ)  
On-Site

## Content

- Chapter 1: Friction  
adhesion, geometrical and real area of contact, Friction experiments, friction powder, tribological stressing, environmental influences, tribological age, contact models, Simulation of contacts, roughness.
- Chapter 2: Wear  
plastic deformation at the asperity level, dissipation modes, mechanical mixing, Dynamics of the third body, running-in, running- in dynamics, shear stress.
- Chapter 3: Lubrication  
base oils, Stribeck plot, lubrication regimes (HD, EHD, mixed lubrication), additives, oil characterization, solid lubrication.
- Chapter 4: Measurement Techniques  
friction measurement, tribometer, dissipated frictional power, conventional wear measurement, continuous wear measurement(RNT)
- Chapter 5: Roughness  
profilometry, surface roughness parameters, evaluation length and filters, bearing ratio curve, measurement error
- Chapter 6: Accompanying Analysis  
multi-scale topography measurement, chemical surface analysis, structural analysis, mechanical analysis

Exercises are used for complementing and deepening the contents of the lecture as well as for answering more extensive questions raised by the students.

The student can

- describe the fundamental friction and wear mechanisms, which occur in tribologically stressed systems
- evaluate the friction and wear behavior of tribological systems
- explain the effects of lubricants and their most important additives
- identify suitable approaches to optimize tribological systems
- explain the most important experimental methods for the measurement of friction and wear, and is able to use them for the characterisation of tribo pairs
- choose suitable methods for the evaluation of roughness and topography from the nm-scale to the mm-scale and is able to interpret the determined values in respect to their effect on the tribological behavior
- describe the most important surface-analytical methods and their physical principles for the characterization of tribologically stressed sliding surfaces

preliminary knowledge in mathematics, mechanics and materials science recommended

### Competence Certificate

Successfully passing the Tutorial is a prerequisite for taking part in the exam "Continuum Mechanics of Solids and Fluids" (T-MACH-110377).

For students of Mechanical Engineering (BSc) that have chosen the Major Field "Continuum Mechanics" and for students of Material Science and Material Technology (BSc) the prerequisites consist of successfully solving the written homework sheets as well as the computational homework sheets during the associated computer tutorials.

For students of Mechanical Engineering that have chosen a different Major Field of students from different fields of study the prerequisites consist of successfully solving only the written homework sheets.

### Prerequisites

None

### Annotation

Due to capacity reasons it is possible that not all students of this course can be admitted to the computer tutorials. Students of the bachelor's degree program in mechanical engineering who have chosen the Major Field Continuum Mechanics (SP-Nr 13) and students of the bachelor's degree program in material science and material technology will be admitted to the computer tutorials in any case.

If additional places are available in the computer tutorials for this course, these will be allocated according to the BSc average grade.

### Workload

30 hours

**Competence Certificate**

Successful participation in this course allows for registration to the Exam "Introduction to the Finite Element Method" (see 76-T-MACH-105320)

For students of Mechanical Engineering (BSc) that have chosen the Major Field "Continuum Mechanics" the prerequisites consist of successfully solving the written homework sheets as well as the computational homework sheets during the associated computer tutorials.

For students of Mechanical Engineering that have chosen a different Major Field and for students from different fields of study the prerequisites consist of successfully solving only the written homework sheets.

**Annotation**

Knowledge of the contents of the courses "Continuum Mechanics of Solids and Fluids" and "Mathematical Methods of Continuum Mechanics" as well as the corresponding tutorials are expected.

Due to capacity reasons it is possible that not all students of this course can be admitted to the computer tutorials. Students of the bachelor's degree program in mechanical engineering who have chosen the Major Field Continuum Mechanics (SP-Nr 13) will be admitted to the computer tutorials in any case.

If additional places are available in the computer tutorials for this course, these will be allocated according to the BSc average grade.

**Workload**

30 hours

## Vacuum and Tritium Technology in Nuclear Fusion

2190499, SS 2025, 2 SWS, Language: German/English, [Open in study portal](#)

On-Site

### Content

Introduction

Tritium Handling

Tritium Plant Technologies

Tritium and Breeding

Fundamentals of Vacuum Science and Technology

Fusion Vacuum systems

Matter Injection into the Plasma Chamber

Fuel Cycle of ITER and DEMO

The students have acquired the necessary understanding in order to design and size facilities for tritium operation. They understand the process steps in the tritium plant of a fusion reactor for tritium removal and tritium recovery from tritiated exhaust gas. Furthermore, the students have understood the fundamentals of vacuum physics and are able to design and choose vacuum pumps properly.

recommended is Knowledge in "Fusion Technology A"

oral exam of about 20 min

## V

**Validation of technical Systems**

2146230, SS 2025, 2 SWS, Language: English, [Open in study portal](#)

**Lecture (V)**  
**On-Site**

**Content**

- Discussion and analysis of various validation environments from technical areas such as automotive, medical technology, device technology (focus on automotive)
- Teaching methodological aspects of how validation of complex cyber-physical systems is planned and operationalized
- Learning content on power test benches with their mechanical and electrical design, as well as measurement and control technology, actuators and modeling
- Understanding the use of simulations, their scaling and connection to the real system
- Application of theoretical knowledge in the context of a leading example in the field of automated driving
- Outlook on the role of large language models and gamification in validation

V

**Vehicle Ergonomics**

2110050, SS 2025, 3 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
On-Site

**Content**

- Basics of physical-body related ergonomics
- Basics of cognitive ergonomics
- Theories of driver behaviour
- interface design
- usability testing

**Learning objective:**

An ergonomic vehicle is best adapted to the requirements, needs and characteristics of its users and thus enables effective, efficient and satisfying interaction. After attending the lecture, students are able to analyse and evaluate the ergonomic quality of various vehicle concepts and derive design recommendations. They can consider aspects of both physical and cognitive ergonomics. Students are familiar with basic ergonomic methods, theories and concepts as well as with theories of human information processing, especially theories of driver behaviour. They are capable of critically reflecting this knowledge and applying it in a flexible way within the user-centered design process.

## Vehicle Lightweight design – Strategies, Concepts, Materials

2113102, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)  
Blended (On-Site/Online)

### Content

#### Strategies in lightweight design

Shape optimization, light weight materials, multi-materials and concepts for lightweight design

#### Construction methods

Differential, integral, sandwich, modular, bionic

#### Body construction

Shell, space frame, monocoque

#### Metallic materials

Steel, aluminium, magnesium, titan

### **Aim of this lecture:**

Students learn that lightweight design is a process of realizing a demanded function by using the smallest possible mass. They understand lightweight construction as a complex optimization problem with multiple boundary conditions, involving competences from methods, materials and production.

Students learn the established lightweight strategies and ways of construction. They know the metallic materials used in lightweight construction and understand the relation between material and vehicle body.

V

**Vibration Theory**

2161212, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

Concept of vibration, superposition of vibration with equal and with different frequencies, complex frequency response.

Vibration of systems with one dof: Free undamped and damped vibration, forced vibration for harmonic, periodic and arbitrary excitation. Excitation of undamped vibration in resonance.

Systems with many degrees of freedom: Eigenvalue problem for undamped vibration, orthogonality of eigenvectors, modal decoupling, approximation methods, eigenvalue problem for damped vibration. Forced vibration for harmonic excitation, modal decomposition for arbitrary forced vibration, vibration absorber.

Vibration of systems with distributed parameters: Partial differential equations as equations of motion, wave propagation, d'Alembert's solution, Ansatz for separation of time and space, eigenvalue problem, infinite number of eigenvalues and eigenfunctions.

Introduction to rotor dynamics: Laval rotor in rigid and elastic bearings, inner damping, Laval rotor in anisotropic bearings, synchronous and asynchronous whirl, rotors with asymmetric shaft.

**Virtual Engineering I**

2121352, WS 24/25, 2 SWS, Language: English, [Open in study portal](#)

**Lecture (V)  
On-Site**

**Content**

The course includes:

- Conception of the product (system approaches, requirements, definitions, structure)
- Generation of domain-specific product data (CAD, ECAD, software, ...) and AI methods
- Validation of product properties and production processes through simulation
- Digital twin for optimization of products and processes using AI methods

After successful attendance of the course, students can:

- conceptualize complex systems with the methods of virtual engineering and continue the product development in different domains
- model the digital product with regard to planning, design, manufacturing, assembly and maintenance.
- use validation systems to validate product and production in an exemplary manner.
- Describe AI methods along the product creation process.

V

**Vortex Dynamics**

2153438, WS 24/25, 3 SWS, Language: German, [Open in study portal](#)

**Lecture (V)**  
**Blended (On-Site/Online)**

**Content**

The students are familiar with the physical basics and the mathematical description possibilities of turbulent flows and can deal with the basic concepts of turbulent flows such as rotation and circulation. They are able to describe planar and spatial turbulent flows in a stationary and time-dependent form with regard to structure and time behavior. The students can implement the common vortex identification criteria, apply them to sample flows and interpret the characteristic properties of the flows under investigation.

Content of lecture:

- Definition of a vortex
- Theoretical description of vortex flow
- Steady and time-dependent solutions of vortex flows
- Helmholtz's vortex theorems
- Vorticity equation
- Properties of various vortical structures
- Introduction of various vortex identification approaches

A practice:

Implementation of selected identification criteria in Matlab Matlab-based evaluation of selected flows

**11.490 Course: Welding Technology [T-MACH-105170]**

**Responsible:** Dr.-Ing. Majid Farajian  
**Organisation:** KIT Department of Mechanical Engineering

**Part of:** [M-MACH-102611 - Major Field: Materials Science and Engineering](#)  
[M-MACH-102618 - Major Field: Production Technology](#)

Type	Credits	Grading scale	Recurrence	Version
Oral examination	4	Grade to a third	Each winter term	1

Events					
WT 24/25	2173571	<a href="#">Welding Technology</a>	2 SWS	Block / 	Farajian
Exams					
WT 24/25	76-T-MACH-105170	<a href="#">Welding Technology</a>			Farajian

Legend:  Online,  Blended (On-Site/Online),  On-Site,  Cancelled

**Competence Certificate**

Oral exam, about 20 minutes

**Prerequisites**

none

**Recommendation**

Basics of material science (iron- and non-iron alloys), materials, processes and production, design.

All the relevant books of the German Welding Institute (DVS: Deutscher Verband für Schweißen und verwandte Verfahren) in the field of welding and joining is recommended.

**Workload**

120 hours

*Below you will find excerpts from events related to this course:*

V

**Welding Technology**

2173571, WS 24/25, 2 SWS, Language: German, [Open in study portal](#)

**Block (B)  
On-Site**

**Content**

definition, application and differentiation: welding,  
welding processes, alternative connecting technologies.

history of welding technology

sources of energy for welding processes

Survey: Fusion welding,

pressure welding.

weld seam preparation/design

welding positions

weldability

gas welding, thermal cutting, manual metal-arc welding

submerged arc welding

gas-shielded metal-arc welding, friction stir welding, laser beam and electron beam welding, other fusion and pressure welding processes

static and cyclic behavior of welded joints,

fatigue life improvement techniques

**learning objectives:**

The students have knowledge and understanding of the most important welding processes and its industrial application.

They are able to recognize, understand and handle problems occurring during the application of different welding processes relating to design, material and production.

They know the classification and the importance of welding technology within the scope of connecting processes (advantages/disadvantages, alternatives).

The students will understand the influence of weld quality on the performance and behavior of welded joints under static and cyclic load.

How the fatigue life of welded joints could be increased, will be part of the course.

**requirements:**

basics of material science ( iron- and non-iron alloys), of electrical engineering, of production processes.

**workload:**

The workload for the lecture Welding Technology is 120 h per semester and consists of the presence during the lecture (18 h) as well as preparation and rework time at home (102 h).

**exam:**

oral, ca. 20 minutes, no auxiliary material

**Organizational issues**

Die Blockveranstaltung findet am 23.01.25, 24.01.2025, 30.01.2025, 31.10.2025 jeweils von 09:00 bis 15:00 Uhr in Gebäude 10.91 Raum 380 statt. Anmeldungen erfolgen über den Beitritt zum ILIAS-Kurs. Bei Fragen wenden Sie sich gerne an majid.farajian@kit.edu

**Literature**

Für ergänzende, vertiefende Studien gibt das

Handbuch der Schweißtechnik von J. Ruge, Springer Verlag Berlin, mit seinen vier Bänden

Band I: Werkstoffe

Band II: Verfahren und Fertigung

Band III: Konstruktive Gestaltung der Bauteile

Band IV: Berechnung der Verbindungen

einen umfassenden Überblick. Der Stoff der Vorlesung Schweißtechnik findet sich in den Bänden I und II. Einen kompakten Einblick in die Lichtbogenschweißverfahren bietet das Bändchen

Nies: Lichtbogenschweißtechnik, Bibliothek der Technik Band 57, Verlag moderne Industrie AG und Co., Landsberg / Lech

Im Übrigen sei auf die zahlreichen Fachbücher des DVS Verlages, Düsseldorf, zu allen Einzelgebieten der Fügetechnik verwiesen.

**Workshop on computer-based flow measurement techniques**2171488, WS 24/25, 3 SWS, Language: German, [Open in study portal](#)**Practical course (P)  
On-Site**

**Content**

Registration during the lecture period via the website.

The laboratory course offers an introduction into the acquisition of basic test data in fluid mechanics applications as well as a basic hands-on training for the application of modern PC based data acquisition methods. The combination of lectures about measurement techniques, sensors, signal converters, I/O systems, bus systems, data acquisition, handling and control routines and tutorials for typical fluid mechanics applications allows the participant to get a comprehensive insight and a sound knowledge in this field. The graphical programming environment LabVIEW from National Instruments is used in this course as it is one of the standard software tools for data acquisition worldwide.

Basic design of measurements systems

- Logging devices and sensors
- Analog to digital conversion
- Program design and programming methods using LabView
- Data handling
- Bus systems
- Design of a computer aided data acquisition system for pressure, temperature and derived parameters
- frequency analysis
- 

regular attendance: 52,5

self-study: 67,5

The students are able to:

- theoretically describe and explain the fundamentals of computer aided measurements and adopt them practically
- apply the basics learned during the lecture to a practical problem in the form of a PC exercise

Group colloquia for each topic

Duration: approximately 10 minutes

no tools or reference materials may be used
